Holiday gift-givers' guide

Take control through personal computing

**2106**  
Form 2106  
Department of the Treasury  
Internal Revenue Service  
Your name  
**Raymond D. Granger**  
Employer's name  
**Brooks Publishing Co.**

**Employee Business Expenses**  
(Please use Form 3903 to figure moving expense deduction.)  
▶ Attach to Form 1040.

Social security number  
**141 67 5524**  
Occupation in which expenses were incurred  
**staff writer**

Employer's address  
**617 Westside Blvd. Brooks, ME 04632**

**1981**

**Instructions**  
Use this form to show your business expenses as an employee during 1980. Include amounts:  
• You paid as an employee;  
• You charged to your employer (such as by credit card);  
• You received as an advance, allowance, or repayment.  
Several publications, available from IRS, give more information about business expenses:  
Publication 463, Travel, Entertainment, and Gift Expenses.  
Publication 529, Miscellaneous Deductions.  
Publication 587, Business Use of Your Home.  
Publication 508, Educational Expenses.  
Part I.—You can deduct some business expenses even if you do not itemize your deductions on Schedule A (Form 1040). Examples are expenses for travel (except commuting to and from work), meals, or lodging. List these expenses in Part I and use them in figuring your gross income on Form 1040, line 31, adjusted gross income on Form 1040, line 33.  
Line 2.—You can deduct meals and lodging costs if you were on a business trip away from your main place of work. Do not deduct the cost of meals you ate on one-day trips, when you did not need sleep or rest.  
Line 3.—If you use your own car in your work, you can deduct the cost of the business use. Enter the cost here after figuring it in Part I.  
IV, V, and VI. Base the cost on your actual expenses (such as gas, oil, repairs, depreciation) or on a mileage rate.  
The mileage rate is 20 cents a mile up to 15,000 miles. After that, or for all business mileage on a fully depreciated car, the rate is 11 cents a mile. A car whose cost is being figured under the mileage rate is considered to have a useful life of 5 years. If in any year actual expenses are claimed using a useful life of less than 5 years, use of the mileage rate after that shorter useful life will be limited to 11¢ per mile. (For depreciation, see Publication 463.)  
Figure your mileage rate amount and add it to the business part of what you spent on the car for parking fees, tolls, interest, and State and local taxes (except gasoline tax).  
Line 4.—If you were an outside salesperson with other business expenses, list them on line 4. Examples are selling expenses or expenses for stationery and stamps. An outside salesperson does all selling outside the employer's place of business. A driver-salesperson whose main duties are service and delivery, such as delivering bread or milk, is not an outside salesperson. (For outside salesperson, see Publication 463.)  
Line 5.—Show other business expenses on line 5 if your employer repaid you for them. If you were repaid for part of them, show here the amount you were repaid. Show the rest in Part II.  
Part II.—You can deduct other business expenses only if (a) your employer did not repay you, and (b) you itemize your deductions on Schedule A (Form 1040). Report these expenses here and under Miscellaneous Deductions on Schedule A. Examples are union or professional dues and expenses for tools and uniforms. (For details, see Publication 529.)  
You can deduct expenses for business use of the part of your home that you exclusively and consistently use for your work. If you are not self-employed, your working at home must be for your employer's convenience. (For business use of home, see Publication 587.)  
If you show education expenses in Part I or Part II, you must fill out Part III.  
Part III.—You can deduct the cost of education that helps you keep or improve your skills for the job you have now. This includes education that your employer, the law, or regulations require you to get in order to keep your job or require you to get in order to keep your study salary. Do not deduct the basic requirements for your job or helps you get a new job. (For education expenses, see Publication 508.)  
Part V.—If you trade in a car you used in business for a new one you also used in business, fill out lines 1 through 15. If you paid cash for the new car or traded in a car not used in business, fill out only lines 10 through 15. Refigure the basis for depreciation each year in the future that your percentage of business use changes.

**PART I.—Employee Business Expenses Deductible in Figuring Adjusted Gross Income on Form 1040, Line 31**

1	Fares for airplane, boat, bus, taxicab, train, etc.	
2	Meals and lodging	
3	Car expenses (from Part IV, line 21)	
4	Outside salesperson's expenses (see Part I instructions above)	
5	Other (see Part I instructions above)	
6	Add lines 1 through 5	
7	Employer's payments for these expenses if not included on Form W-2	
8	Deductible business expenses (subtract line 7 from line 6). Enter here and include on Form 1040, line 24	
9	Income from excess business expense payments (subtract line 6 from line 7). Enter here and include on Form 1040, line 21	

**PART II.—Employee Business Expenses that are Deductible Only if You Itemize Deductions on Schedule A (Form 1040)**

1	Business expenses not included above (list expense and amount)	<b>personal computer, monitor, disk drive, printer</b>	<b>\$5850.00</b>
2	Total. Deduct under Miscellaneous Deductions, Schedule A (Form 1040)		

**PART III.—Information About Education Expenses Shown in Part I or Part II**

1	Name of educational institution or activity	
2	Address	
3	Did you need this education to meet the basic requirements for your job?	<input type="checkbox"/> Yes <input type="checkbox"/> No
4	Will this study program qualify you for a new job?	<input type="checkbox"/> Yes <input type="checkbox"/> No
5	If your answer to question 3 or 4 is No, explain (1) why you are getting the education and (2) what the relationship was between	

## Productivity at your fingertips.

The NEC PC-8000 Series is the best-selling micro-computer system in Japan, a country where productivity is something of a national pastime.

Now American ingenuity has provided it — and you — with an especially powerful version of Microsoft® BASIC, CP/M®, with its legendary treasure-house of languages and software, as well as a rapidly expanding family of our own application software packages, available right now.

These include general accounting, accounts receivable, inventory control, data base management, word processing, with dozens more on the way.

Hardware features 24K of ROM, 32K of low-overhead RAM, a Z80A equivalent chip, high resolution graphics in 8 colors, a 248 symbol character set including complete ASCII upper and lower case, graphics symbols, design elements, mixed text and graphics on the same screen, an 80-column character display, a set of user-definable keys, full 82-key keyboard with numeric pad, and a Centronics®

compatible parallel interface, which is also perfectly compatible with the NEC PC-8023 high density dot matrix printer.

People are calling it the "end of the compromise" in microcomputers.

To see if you agree, check it out in person at an NEC America dealer.

# MOUNTAIN MUSIC AIN'T WHAT IT USE TO BE!

## MUSICSYSTEM™ FROM MOUNTAIN COMPUTER.

MusicSystem generates the sound of any musical instrument—real or imagined! Solo or sextet. Rock or classical. Laid-back or loud. At home, the concert hall, or the classroom. MusicSystem sets new standards for computer generated music.

- Works in your Apple®.
- Digital Synthesizer with 16 voices.
- Stereo output.
- Polyphonic—multivoice chords and note sequences.
- Additive synthesis of instruments.
- Waveforms are fully programmable for each voice to create instrument definitions and music dynamics.
- 35Khz sample rate.
- Frequency resolution is .5Hz steps.
- Graphical input of sheet music with a graphics printer.
- Complete software operating system.
- Graphical music editor using light pen (provided), game paddles, or keyboard.

- Pre-entered music provided for immediate playing and enjoyment.
  - Thorough documentation and tutorial user's manual.
- Drop by your Apple® Dealer and ask to hear "Mountain Music" for yourself.

# Give Radio Shack's TRS-80<sup>®</sup> Pocket Computer and Save \$60

## Printer Cassette Interface Save \$20

Reg. 149.95

**129<sup>95</sup>**

Lets you use a recorder to load and save your programs and data on cassettes. Get hard copy printouts, too. With AC adapter/charger, three rolls of paper.

## Cassette Interface Save 39%

**29<sup>95</sup>**

Store and load programs on cassettes. Cable and plugs included. Batteries extra. Recorder not included

The first programmable computer so small it fits in a Christmas stocking. Like a calculator, it has 15 built-in functions that are immediately available. Plus, there's 26 memories and numeric output with a 10-digit mantissa and a 2-digit exponent. To compute trig and angular functions, for example, it works just like a calculator and with the same precision.

Unlike a calculator, the *real* power of the Pocket Computer is in its ability to run our own, or user-written, programs in BASIC. The 1424-step memory can be partitioned into multiple programs.

And the full alphanumeric display permits writing programs that prompt in plain English and display

answers with comments. The Edit and Debug mode make programming easier than it is with a programmable calculator. Inputting is simplified with the typewriter-style keyboard and separate 20-key numeric keypad. The LCD shows 24 characters with automatic scrolling and manual playback for longer lines. Another thing: memory is retained even when the power is off.

By adding the Cassette Interface, anyone can immediately run our software. And look what's available! Electrical and Civil Engineering, Aviation, Surveying, Real Estate, Business Statistics, and more. You can't buy a smarter gift. Better hurry — sale ends Dec. 27th.

# 'Tis the season

All you readers of *Personal Computing Magazine* have two things in common. You're all human and you're all interested in personal computing—that way of doing things that's changing your lives.

I usually write about personal computing in this space. But the December issue is no ordinary issue, so I thought I'd write about that other characteristic all of us have in common. I thought I'd write about being human.

I guess we all know *A Christmas Carol*, that delightful Dickens story about the holiday season.

Recall that Ebenezer Scrooge knew that his money business was very important. He also knew that he was going to keep that business and the money it made him, all to himself—no matter the cost to others. As long as he had his business and it was making money, he thought he was happy.

Poor Scrooge.

We know better. We, who have

read the story and have seen it played again and again in movies, on stage and on television, know that he wasn't really happy. But it took a great shock for him to see his unhappiness. Once he was aware of his true self, and of the way others thought of him, he changed. He became more human, and became really happy.

We're not like Scrooge, and it's a good thing for us. As we contemplate this holiday season we can look back over the years and be satisfied with our actions in both our business and personal lives.

If we're businessmen, and one of our employees needs time away from his workplace, we allow the time, knowing we'll be repaid by a content employee's desire to do a thorough job. We also never charge an exorbitant price just because we think we can get the extra money. We know that a fair price brings its own rewards.

If we're professional men, providing advice and service to others for a fee, we always provide that advice and service with the best interest of the client—not our own personal gain—uppermost in our minds.

If we're teachers, we know that the future of the children entrusted to our care for many hours of the day rests ever-so-heavily in our hands. We are always prepared to go that little extra distance to help our students. We do all we can to see that spark of understanding in eyes that want so badly to understand.

If we're computer hobbyists, we know the efforts we put into the pastime we love can provide great benefit for others. We then willingly share our expertise with those who could use it to make their lives better, or more productive, or easier. We know that spreading our knowledge will make things better for all.

If we're parents, we know that we must discipline our children so they will later be able to discipline themselves. Only in this way, we know, will they be able to properly use the fruits of modern technology—like personal computing—to the utmost. But we always discipline with love, never with anger, nor vindictively.

If we're suppliers in the personal-computing industry, we ensure that products we present for sale to users are top quality.

And all of us are happy to share what we have with those who don't have—like the enjoyment of personal-computing benefits. We tell others about our use of personal computing, and we show them how they can use it, too. But we don't cheat others who work in the field by unlawfully copying their product, for example. We pay for what we get, and give of what we have. We know that even though we expect no repayment, it usually comes anyway.

Don't we.

Happy Holidays.

*David Sabul*

# A New Era for Okidata

## Models 82A and 83A from ASAP

OKIDATA's new printer line represents a breakthrough in economical, quality printing. These new printers have more options and features than any previous OKIDATA printer. Faster print speed and throughput, full 96-character ASCII, and both Centronics and RS232C interfaces standard, all at an affordable price. Models

82A and 83A are ideal for home or business, personal or educational applications. And now, ASAP is offering these new printers at prices you won't want to miss. Compare the features below. Then call ASAP to order your OKIDATA printer today.

Features	Okidata 82A 80 Column Printer	Okidata 83A 136 Column Printer
Print speed	120 characters per second	120 characters per second
Throughput @80 characters per line	76 lines per minute	47 lines per minute
Print technique	Bidirectional	Bidirectional
Dot matrix	9 x 9	9 x 9
Character set	Full 96-character ASCII	Full 96-character ASCII
Graphics characters	64 block characters	111 dots per inch
Interface		
Centronics 8-bit parallel	Standard	Standard
RS232C (1200 bps)	Standard	Standard
Size (inches)	14.2W x 12.9D x 5.2H	20.2W x 12.9D x 5.2H
Ribbon	Standard typewriter	Standard typewriter
Power	100, 115, 220, 240 VAC 50 or 60Hz	100, 115, 220, 240 VAC 50 or 60Hz

## FEEDBACK

### For sale

Dear Editor:

A few years ago our company was involved in a commercial project to install automatic ribbon re-inkers on several hundred personal-computer printers. These compact modification kits are mounted directly inside the printers where they automatically re-ink the ribbon whenever the machine is in operation. The result is consistently crisp, dark print, and ribbon life is extended by a factor of 10 times or more.

We are no longer involved in hardware modification, and we have about 100 of the kits left. The original selling price was \$150 per kit, which included installation. The remaining surplus is being made available to interested computer users for \$18.25 each, postpaid (\$1 extra for air mail). The purchaser must do the installation.

These re-inkers will work on any printer with a standard one-half inch (or narrower) ribbon.

We will be happy to supply these kits for as long as they last.

William D. Johnston  
c/o Applied Computing  
1808 Pomona Dr.  
Las Cruces, NM 88001

### Speech products

Dear Editor:

We were dismayed to find that we had been omitted from your survey of voice-system suppliers in the June 1981 issue. We would appreciate your correcting this oversight by telling your readers about Mimic Electronics and its speech-processing products.

The MIMIC Speech Processor—available in several forms—provides both speech input and output capabilities. It is a low-cost alternative with good quality speech at relatively low sampling rates. Applications for

our products range from hobbyist experimentation to advanced speech-recognition research to commercial uses. Documentation and demonstration audio tapes are available, as well as complete plug-in systems for various personal computers.

Robert E. Dodge  
President  
Mimic Electronics

### Clearing the confusion

Dear Editor:

I enjoyed reading the article on modems in the September 1981 issue. However, I would like to point out that the features column (in the comparison chart) concerning our Modem I is a little confusing. Upon reading it appears that the Modem I does not use RS-232 interface yet requires an RS-232 cable. This is not quite the case.

The Modem I operates in full duplex using RS-232. If the Modem I is used with a TRS-80 Model I, Level II with 16k, an optional software driver and special cable may be used. These options permit the Modem I to operate through our standard cassette-interface port in a form of modified half duplex—without the necessity of an RS-232 interface.

Thank you for your fine article and we look for many more in issues to come.

Bill Walters  
Consumer Information Manager  
Radio Shack

### Author input

Dear Editor:

The annual Canadian Post Office strike has ended and I've received the July issue, which included my article "Despace."

Although the text of the article included the revisions I made some

time ago, the revised flowchart and program listing didn't make it into print. As a result, line 55184 doesn't handle DATA statements in the manner described in the article. This line should read:

```
55185 IF PEEK (X-1) = 136 OR
      PEEK (X-1) = 34 OR
      PEEK (X-1) = 44 THEN
55190.
```

Your readers may wonder why the POKes called for by line 55500 have to be entered manually. In testing the program, I found that the computer would often get "lost" if these POKes were done as part of the program. In order to recover control I had to press RESET, which sometimes wiped everything out. Doing these POKes in the command mode eliminated the problem.

I've also found it better to delete the "CLEAR 50" from line 55500 and enter it myself, after doing the POKes.

Don Wood  
Winnipeg, Manitoba, Canada

## Receivables and payables

Dear Editor:

I read your September and October 1981 issues. In the September article on receivables, PRODIGY SYSTEMS wasn't mentioned although it does have an accounts-receivable program. In the October article on payables, I would also like to point out some omissions.

In the September article table of features, International Micro had a high of 27 features and Micro Architect had a low of seven. It is with a great deal of pleasure that I point out that PRODIGY SYSTEMS has 21 of the listed features.

The table of reports and journals in the same issue listed 30 features, of which four companies—BPI Systems, Computer Products International, International Micro and

Micro Business Software—were tied with 13 features each. At the low end, two companies, Business Enhancement Compuservice and Taranto, had only four features. PRODIGY SYSTEMS had 19.

In the October issue's Accounts Payable Chart of Features, PRODIGY also issues cash basis, on-line processing, one-time vendors, credit/debit memos, finance charges added, multiple bank accounts and trial-payment run.

In the chart of reports, PRODIGY does issue journal/batch proof, bank reconciliation, monthly voucher register, mailing labels and monthly cash summaries.

Thank you for your patience and consideration.

David N. Perkel  
Vice President, Sales  
PRODIGY SYSTEMS

## On the cover

Dear Editor:

We have only been subscribers for the last two months (August and September 1981). We are also the proud and satisfied owners of a Commodore VIC 20 personal computer.

We have searched (in vain) through your first two issues for a single mention of the VIC 20. Imagine our surprise when we revisited the cover of the September issue of *Personal Computing* and discovered two VIC 20s on the front cover. How come the VIC 20 can make the front cover without one word of recognition between the front cover and the back cover for two issues in a row?

Robert W. Tillotson, Jr.  
Robert W. Tillotson, Sr.  
Grand Island, NY

*Editor's note: We goofed on that one. Indeed, the computers on the cover with those delightful children were Commodore VIC 20s. This is but one of the computers that can be used for education. But please note that we*

*aren't in the business of talking about particular pieces of hardware. We talk about personal computing, and that's a different ball game.*

*Meanwhile, belated thanks to Commodore for the loan of the VIC 20s. The editor who let that one go by has been put before the editorial firing squad.*

## Receivables interface

Dear Editor:

We were pleased to see North Star Computer's ACCPAC Accounts Receivable System included in the September 1981 review of A/R packages.

We would like to call attention to the fact that our A/R package now interfaces with two of our new software products—ACCPAC Inventory Control and Analysis, and Order Entry and Invoicing.

Thank you for evaluating software products available for the personal-computer user market.

Peter M. Nieber  
Manager, Product Marketing  
North Star Computers

## Editorial comment

Dear Editor:

I enjoyed your September issue editorial. Being an old Arlo Guthrie fan myself, I thought you used him in a unique parable to decipher the personal-computer movement.

Best wishes with the new positioning of *Personal Computing*. We have been looking for the *Harvard Business Review* of personal-computer magazines to emerge—a magazine that addresses the needs of the new personal-computer-using manager.

Fred Gibbons  
Software Publishing Corp.  
Mountain View, CA

**Amdek  
Video-300**

At Amdek, we make monitors for people who demand state-of-the-art color. And for people who know that crisp, clear text display is an art in itself.

Our versatile Color-I 13" video monitor features standard NTSC composite input, front-mounted controls and a built-in speaker with audio circuit. Our popular Video-300 12" Green Phosphor monitor has an easy-to-read, non-glare screen, 18 MHZ band width and 80 x 24 character display.

Both offer easy portability, with lightweight cabinetry and molded-in handles. And both are fully

compatible with most computer and word processing systems. So compare our performance with other monitors. Then compare prices. For quality and value, you'll choose Amdek.

**NEW THIS FALL:** our advanced high resolution Color-II monitor with interface board for Apple II compatibility. Color-II features RGB, TTL input and 560(H) x 260(V) resolution for crisp 80 x 24 character display and exceptionally sharp color graphics. Ask your dealer about an Amdek Color-II, Color-I, or Video-300 monitor today.

## MTC AIDS-III™

MODELS I & III ...\$69.95

MODEL II ...\$99.95

Introducing the latest addition to MTC's family of data management systems, AIDS-III. NO PROGRAMMING, easy to use. COMPLETE PACKAGE including demonstration application, documentation and MAPS-III (see below).

- Up to 20 USER-DEFINED FIELDS of either numeric- or character-type.
- CHARACTER-type fields may be any length (total: up to 254 characters).
- NUMERIC-type fields feature automatic formatting, rounding, decimal alignment and validation.
- Full feature EDITING when adding or changing records:
  - ENTER FIELD (can't type-in more characters than specified).
  - BACKSPACE (delete last character typed).
  - DELETE FIELD contents.
  - RESTORE FIELD contents.
  - RIGHT-JUSTIFY FIELD contents.
  - SKIP FIELD (to next or previous field).
  - SKIP RECORD (to next or previous record).
- SORTING of records is MACHINE CODE assisted.
  - 200 RECORDS (40 characters) in about 5 SECONDS.
  - ANY COMBINATION of fields (including numerics) with each field in ascending or descending order.
- SELECTION of records for Loading, Updating, Deleting, Printing and Saving is MACHINE CODE assisted.
  - Specify up to 4 CRITERIA, each using one of 6 RELATIONAL COMPARISONS.
  - LOAD or SAVE selected records using MULTIPLE FILES.
  - Example: Select records representing those people who live in the state of Colorado, but not in the city of Denver, whose last names begin with "F" and whose incomes exceed \$9000.00.
  - Example: Select records representing those sales made to XYZ COMPANY that exceed \$25.00, between the dates 03/15 and 04/10.

MAPS-III (MTC AIDS PRINT SUBSYSTEM), included at no charge, has the following features:

- Full AIDS-III SELECTION capabilities.
- Prints user-specified fields DOWN THE PAGE.
- Prints user-specified fields in titled, columnar REPORT FORMAT, automatically generating column headings, paging and (optionally) indentation.
- Can create a single report from MULTIPLE FILES.
- Prints user-defined formats for CUSTOM LABELS, custom forms, etc.

BELOW ARE TESTIMONIALS from owners of AIDS systems. These are absolutely authentic statements and are typical of the comments we receive.

"This program will do more for my business than all the other programs I have, combined."

David Wareham, Vice President (EDP), National Hospital and Health Care Services Inc.

"We have 32 different Data Base Management packages for the TRS-80. AIDS-III is easily the best. It also makes it easier for us to step up to our Model II since the package is available for both computers."

Jack Bilinski, President, 80 Microcomputer Services

"Your AIDS program is far and away the finest information management system that I've ever seen. I am currently using it to maintain a clear picture of the demographic data on all the kids in our residential treatment program and it is working for me superbly."

Frank Boehm, Director, Front Door Residential Treatment Program

## MTC AIDS CALCULATION SUBSYSTEM-III™

MODELS I & III ...\$24.95

MODEL II ...\$39.95

MTC's most popular AIDS subsystem. Use for report generation involving basic manipulation of numeric data. Features are:

- User-specified page title
- Columnar Headings
- Optional Indentation
- Use for accounting, inventory, financial and other numeric-based information systems.

- Columnar subtotals generated when there is a change in a user-specified column.
- User-specified Columnar Totals
- Columnar values computed using constants and/or column values
- Balance forward calculations (Ex: Gross sales equals previous gross sales + sale amount + sales tax).

Compare AIDS-III™/CALCS-III™ with any other data management package under \$100!

**CALCS-III™ REQUIRES THE PURCHASE OF AIDS-III™**

## AIDS OWNERS! WE HAVE WHAT YOU'VE BEEN WAITING IV...

**MTC CALCS-IV™, that is.**

- More Computations
- Save Report Formats on Disk
- Faster, and more!

**MTC CALCS-IV™**

For Models I & III .....\$39.95

For Model II .....\$59.95

## MTC AIDS MERGE-III™

This subsystem will combine up to 14 AIDS-created data files into a single, large file. An optional purge capability removes duplicate entries while performing the merge operation (can even be used to eliminate duplicates in a single file). Machine-code assisted for high-speed performance, MERGE-III™ properly handles files sorted by any combination of fields, including numerics, with each field in ascending or descending order.

**MTC AIDS MERGE-III™**

For Models I & III .....\$19.95

For Model II .....\$29.95

## OUTLOOK

### **ISC offers money-back guarantee**

To introduce more users to color graphics, Intelligent Systems is offering a "no questions asked" money-back guarantee on its 3650 desktop computer, 8001G color-graphics terminal and 8001I color-graphics terminal.

To qualify for the money-back guarantee, a customer must place a cash order for an evaluation unit before December 31, 1981. The unit can be tried, tested, used and examined for 30 days. If the user is not satisfied, the unit and any software purchased can be returned for a full refund.

Intelligent Systems is also encouraging customers to sample its products with price cuts that will be in effect for the duration of the offer. The reductions represent savings from 17 to 23 percent over regular single-piece prices.

More information can be obtained from Intelligent Systems, Intecolor Dr., 225 Technology Park/Atlanta, Norcross, GA 30092; (404) 449-5961.

### **On-line clearinghouse for information**

The Micro Advisor, a source of information and advice on personal computers, is now accessible to users with a terminal or a personal computer through the CompuServe Information network.

Features of the service include a question-answer forum on personal computers, a list of publications including some little-known newsletters, a nationwide list of clubs that meet regularly, a sound-off section for people with gripes they want to air, announcements of new products and reviews of new software.

For more information contact Battery Lane Information Services, P.O. Box 30214, Bethesda, MD 20814.

### **Call for participation in NECC-82**

Authors are invited to submit papers describing actual experiences with computer use in the classroom, or the consequences of such use on the educational process in general. The papers will be presented at the 1982 National Educational Computing Conference (NECC-82) to be held in Kansas City, Mo., June 28-30, 1982.

Papers should report concrete results or be surveys or tutorials which include a synthesis and thorough evaluation. It is expected that most papers will report on specific materials, problems, programs and measures of success or accomplishment.

More information can be obtained from Michael Staman, NECC-82 General Chairman, Campus Computing Services, University of Missouri-Columbia, 305 Jesse Hall, Columbia, MO 65211.

### **Standing behind IBM**

Lifeboat Associates has just announced an operating system it calls SB-86. The company claims it is totally compatible with PC-DOS, the operating system IBM is providing on the IBM Personal Computer.

Tony Gold, president of Lifeboat, has slated this operating system as the new standard for 16-bit personal computers.

## Global village in Philadelphia

Everett W. Faircloth

One of the most computerized businesses today is the newspaper business, as almost all metropolitan and medium sized papers (50,000 circ.) have switched over from typewriters to electronic word processors. Gone is the almost soothing sound of a room full of typists pounding out tomorrow's headlines.

The "global electronic village" that Marshall McLuhan, a famous media critic, talked about more than a decade ago, is found in newsrooms across the nation where the manual typewriter once reigned supreme. McLuhan felt that one of the results of all the technological advancements being made in electronics would be instantaneous communication between any two points on the globe. Hence, this new electronic interdependence would recreate the world in the image of a global village.

Of course, one of the future's most potential users of personal computers is the newspaper writer.

As most writers on newspaper staffs now presently own typewriters, in the near future it will be to their advantage to have word processors of their own. Presently, the cost is out of range of many potential buyers to obtain dedicated word processors.

However, one professional in this field, Margo E. Downing-Faircloth, a reporter for the *Philadelphia Bulletin*, has found that with the relatively low cost of personal computers, the ability to do serious text editing is increased.

Faircloth has found that the money spent on a personal computer—which has the capability to do serious word processing, and other related items such as the ability to work remotely from home and connect to information utilities using telephone lines—is a bargain. This is particularly true when the same personal computer plays arcade games, keeps financial records and plays music. So the money spent is spread out over several different functions.

Aside from the convenience of having her own word processor programmed into her personal computer, Faircloth can also take advantage of some tax breaks to offset some of her expenses.

According to her tax accountant, Jim Weikart of the New York based firm of Weikart Tax Associates, a person owning a personal computer can get

a 10 percent investment credit and depreciation for up to five years.

For example, if the system cost about \$3500, a \$350 tax credit would be allowed right off the top. In addition, Weikart says you can depreciate the equipment by at least 15 percent the first year, and continue depreciating it for five years. So, in a sense, the government will subsidize your system.

Faircloth is apparently not the only person using the tax-credit laws to her advantage. Weikart says that in the past year, he has seen significantly more requests for tax write-offs on computer equipment.

Faircloth's system consists of an Apple II Plus personal computer and an Apple II disk drive. She uses a Leedex 12-inch black and white monitor, an Epson MX-80 printer, a D.C. Hayes modem to complete it, along with Applewriter software—a kind of screen-oriented editor which resembles the one used by her employer.

While developing her system, Faircloth came up against a major obstacle. She couldn't find a terminal program to drive the D.C. Hayes modem and be compatible with the Applewriter program. Finally,

Although the familiar clacking of typewriters is disappearing from the country's newsrooms, reporters are finding that personal computers help them get those late-breaking stories in on time.

her husband wrote her a custom machine-language program to link the two.

Now she can write a story at home in Berlin, N.J., and transmit it by phone to the *Bulletin's* mainframe (an IBM 370) in Philadelphia. The same story can then be retrieved by phone for final editing and approval in the *Bulletin's* bureau office in Cherry Hill, N.J.

"I think it's a great idea," says Faircloth's Assign-

# Planning Your Future Growth?

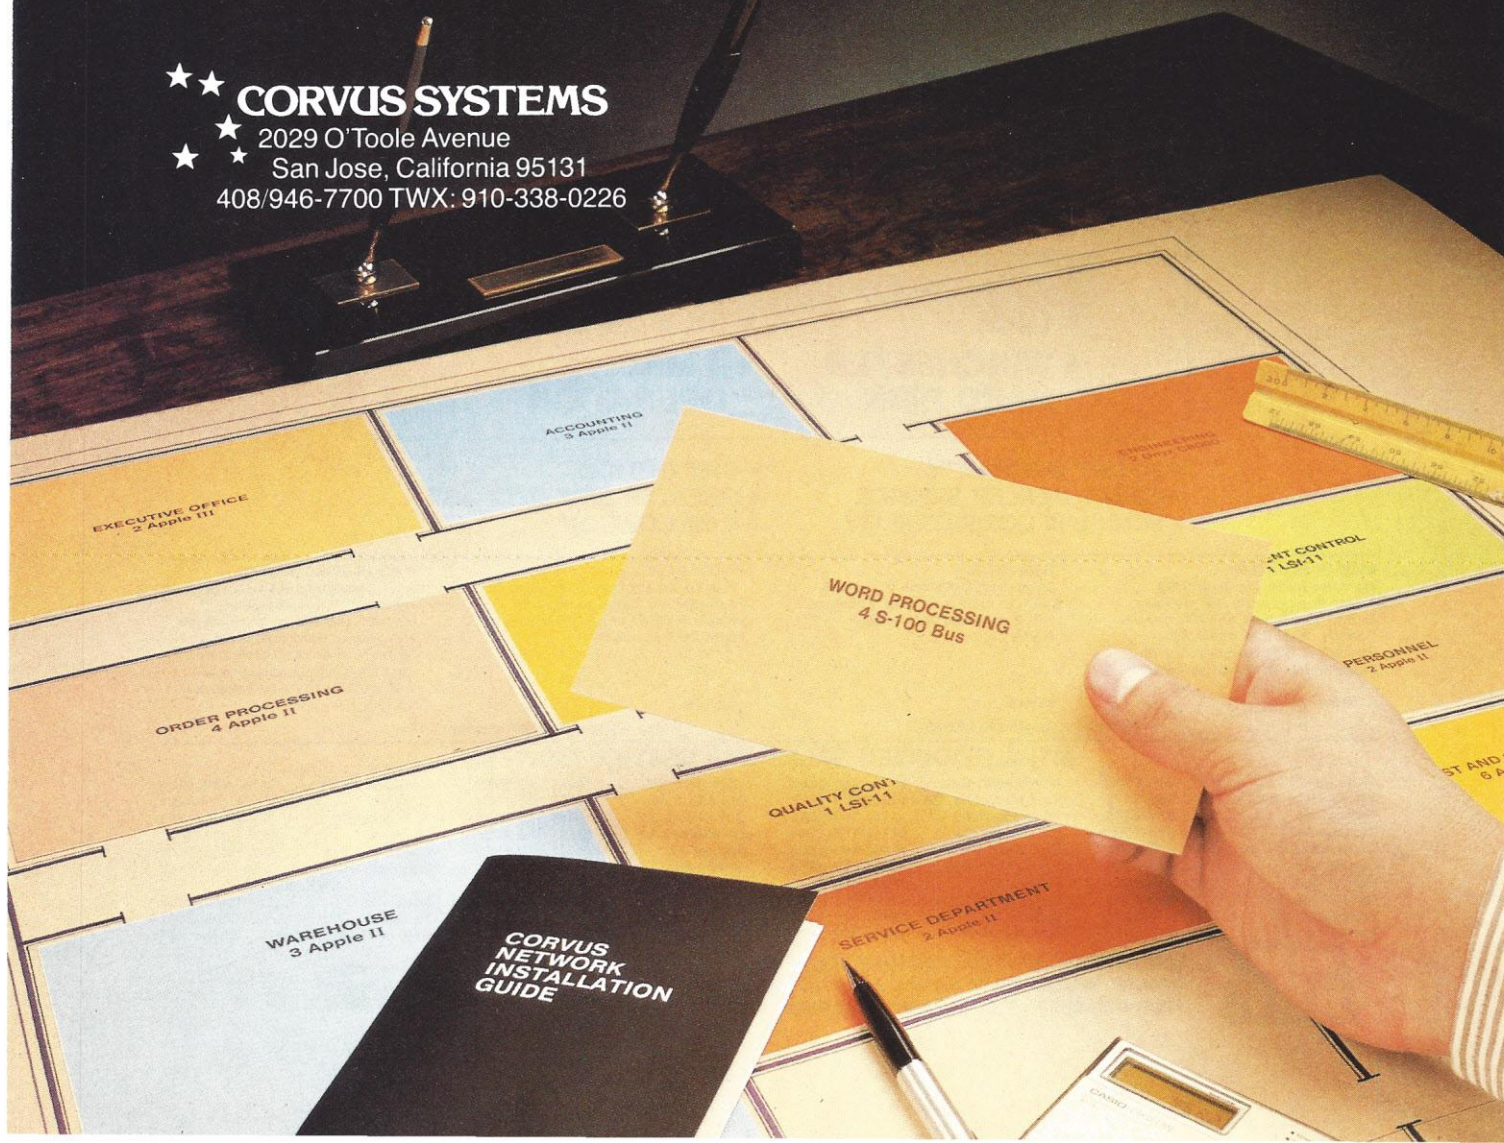

## OMNINET™ Can Help You Today.

OMNINET is the first low-cost high-performance carrier-sense-multiple access local network specifically designed for microcomputers. It provides everything that Ethernet promises for mainframes, but is available now with interfaces to a wide range of popular microcomputers, including the Apple II, DEC LSI-11, and Onyx C-8000.

OMNINET uses low-cost, easy-to-install twisted pair wire that makes installing and adding new computers as simple as hooking up stereo speakers. You can connect up to 64 different computers and peripherals in a high performance one megabit per second network with a total length of many thousands of feet. Micro-computer-based intelligent transporters in each computer manage total network operations without stealing processing power or requiring significant software support from the host.

Corvus has helped you expand your personal computer into a powerful business tool with mass storage, low cost backup, and data sharing. Now, we give you an intelligent solution to your local communications needs. With OMNINET's microvirtual circuits, you can accomplish direct intercomputer communications with your microcomputers, a thing that was only dreamed of on mainframes yesterday. Contact your Corvus dealer now for full details.

ment Editor, Joe Happ. "It's a terrific concept. There are so many possibilities. For instance, I could call Margo to do something near her home and have the story in quickly because she wouldn't have to drive in to the office. That would be particularly effective when on deadline."

But there are other possibilities, Happ says, because what you're actually talking about are remote text-editing terminals not only in homes, but in small bureau offices in remote places.

The Bulletin uses telerams in some of its bureau offices. Telerams are word-processing terminals made by Hewlett-Packard, which have the ability to both transmit and receive text over existing phone lines.

"With this ability, I can send background information concerning a possible story to Trenton, for example," Happ says, from the wires or just from notes.

Happ states that information can also be sent in from the bureaus on breaking stories—stories that require information from different parts of the New Jersey region to the main office in Cherry Hill where it can all be compiled and written into one regional story.

Before Fairecloth's stories could be accepted by the *Bulletin's* mainframe, she had to obtain proper security clearance. This essentially amounted to a password and a complicated key sequence used in front of all stories. *The Bulletin* wouldn't want some stray writer from the *Philadelphia Inquirer* calling in.

## Computers in sales

The briefcase and flip chart—the salesman's repertoire of tools—may, over the next decade, become another casualty of the computer age. According to a report by American Business Press, an imaginative approach to selling ad-space has been developed by Robert K. Singer, district sales manager of McGraw-Hill's Electrical Construction and Maintenance and Electrical Wholesaling. With the help of an Apple computer, this approach is already beginning to pay off.

Singer is using the machine mostly for territory management and gaining time over his competition. Singer's entire customer file is in chronological order on the data bank, and each day the computer reports on which customers should soon be called. When Singer chooses the customers he intends to see, he can quickly find their complete files. And

since every piece of new information on an account is entered as soon as it is received, files are always completely up-to-date.

Singer and a McGraw-Hill cohort, Steve Donahue, who is also using a personal computer to augment his sales, describe the Apple as "a typewriter that never forgets." They point out that the convenience of inputting information once and then only updating and correcting when necessary relieves the salesmen of a lot of unnecessary work.

Further on in time, Singer hopes to use the computer in presentations to potential customers. Having made a few test runs where the Apple was used like a slide projector—and having increased his sales because of these presentations—Singer is making plans to bring the computer to his clients' offices more often.

There are drawbacks in this approach, however. "There are a lot of people who are used to viewing the computer as an adversary, like the machine at the bank that tells them they're overdrawn by mistake, or the one you can't argue with when mistakes appear on the credit-card bill." But in the end Singer feels that as customers get used to seeing the computer as part of a salesman's traveling show, any initial client rejection of the machine will rapidly disappear.

## Radio Shack hooking up to networks

"In the decade of the eighties," says John Roach, president and CEO of Tandy Corporation, "networking of computers will become commonplace." Thus, the corporation has joined with Datapoint in announcing ARCNET for the TRS-80 Model II computer. It gives the user, "a very big computer resource from very small computers," says Roach.

For some time, local networks have been an area of serious work for a number of manufacturers. The advantage of the networks is that smaller computers can be used to access shared resources for substantially less money than those resources cost. The shared resources need only be purchased once, and then can be distributed to many users through the local network.

Other local networks include the Ethernet from Xerox (also sponsored by Intel, a semiconductor manufacturer, and Digital Equipment Corp., a minicomputer builder) and Z-Net from Zilog, an Exxon company. Also, Nestar Systems makes a

controller that will network Apple computers.

Radio Shack is jumping into the field in a slightly different manner, however. It will use the local-network component of Datapoint's Attached Resource Computer, ARCNET, to provide the high-speed, low-cost local network for the Model II.

Tandy will use the ARCNET protocols and software, and a new large-scale integrated-circuit interface component from Datapoint to provide the network, which can operate at 2½ million bytes per second. Using these devices and protocols, users can connect as many as 255 computers to a local network, along with their peripherals.

And ARCNET will also be able to contain Datapoint processors or peripherals, like the company's 137-Mbyte disk, or 900 line-per-minute printer. The processors could be used to hook a local

network of Model IIs into a Datapoint network, or, using Radio Shack's recently announced bi-synchronous communications software, they can be connected to certain IBM or DEC communications systems.

"Obviously," comments Roach, "the size and power of the TRS-80 system has taken a quantum leap forward, and Datapoint users have new flexibility in system configuration."

Users who already have Model II computers need to purchase an interface card that plugs into existing card slots in the rear of the computer. The card will be built by Texas Peripherals, a joint venture of the two companies that already supplies each with disk drives. The card will sell for about \$400. The user must also acquire a co-axial cable, sold by the foot, and a junction box. A passive junction box,

that can handle up to four computers, sells for about \$200. An active box (one that includes signal amplification) that can connect more computers, will sell for about \$2000.

For more information: Radio Shack, One Tandy Center, Ft. Worth, TX 76102; (817) 390-3700.

## Computers in hydrology

When Linsley-Kraeger Associates purchased its first personal-computer system, the company intended it to be used for some engineering programs that didn't require much memory. The system was also intended for some text processing.

This consulting firm, specializing in hydrology, hydraulics, and water-resources planning and management, soon found that its Cromemco System Two computer had capabilities that far exceeded company expectations. With the discovery of these advanced capabilities, the firm decided to start running more lengthy simulation models.

When running these simulations, the company discovered a major limitation of the system. It didn't have adequate storage space for the large amount of data they required. To solve the storage problem, the company acquired a second Cromemco personal computer, the Z-2H Hard Disk Computer system. This system included 11 megabytes of storage on a Winchester hard disk, and was configured with Cromemco's CROMIX operating system.

Dr. Brook Kraeger, one of the founders of the company, proceeded to write a number of programs in Cromemco BASIC which allowed him to perform a variety of analyses on hydrological data. For example, one program performs multiple-regression analyses on time-series data, including monthly rainfall and streamflow data for a period of 60 years.

The type of information these programs provide is used in a variety of ways, such as determining how large a spillway to design when building a dam or to determine at what height to place a bridge above a riverbed. The results of the statistical analyses run with these programs have already been incorporated in a number of completed reservoir and water-resources studies.

With the CROMIX operating system, the nine-track tape drive, and some additional hardware that

## Turn your Apple into the world's most versatile personal computer.

**The SoftCard™ Solution.** SoftCard turns your Apple into two computers. A Z-80 and a 6502. By adding a Z-80 microprocessor and CP/M to your Apple, SoftCard turns your Apple into a CP/M based machine. That means you can access the single largest body of microcomputer software in existence. Two computers in one. And, the advantages of both.

**Plug and go.** The SoftCard system starts with a Z-80 based circuit card. Just plug it into any slot (except 0) of your Apple. No modifications required. SoftCard supports most of your Apple peripherals, and, in 6502-mode, your Apple is still your Apple.

**CP/M for your Apple.** You get CP/M on disk with the SoftCard package. It's a powerful and simple-to-use operating system. It supports more software than any other microcomputer operating system. And that's the key to the versatility of the SoftCard/Apple.

**BASIC included.** A powerful tool, BASIC-80 is included in the SoftCard package. Running under CP/M, ANSI Standard BASIC-80 is the most powerful microcomputer BASIC available. It includes extensive disk I/O statements, error trapping, integer variables, 16-digit precision, extensive EDIT commands and string functions, high and low-res Apple graphics, PRINT USING, CHAIN and COMMON, plus many additional commands. And, it's a BASIC you can compile with Microsoft's BASIC Compiler.

**More languages.** With SoftCard and CP/M, you can add Microsoft's ANSI Standard COBOL, and FORTRAN, or

Basic Compiler and Assembly Language Development System. All, more powerful tools for your Apple.

**Seeing is believing.** See the SoftCard in operation at your Microsoft or Apple dealer. We think you'll agree that the SoftCard turns your Apple into the world's most versatile personal computer.

**Complete information?** It's at your dealer's now. Or, we'll send it to you and include a dealer list. Write us. Call us. Or, circle the reader service card number below.

SoftCard is a trademark of Microsoft. Apple II and Apple II Plus are registered trademarks of Apple Computer. Z-80 is a registered trademark of Zilog, Inc. CP/M is a registered trademark of Digital Research, Inc.

# Accounting Plus II

## It Figures

**I**t figures that the same people who brought you Accounting Plus\* on the larger computer systems wouldn't forget the Apple.\*\* Accounting Plus II brings to the Apple Computer a completely integrated, easy to use accounting system. Accounting Plus II doesn't require any special hardware, only 48K of RAM and two floppy drives or hard disk, and you don't have to be a CPA to use it. Accounting Plus II organizes and streamlines your paper flow and generates checks, invoices, statements and purchase orders on pre-printed forms. The system supports a solid audit trail which your business requires and your accountant demands.

## FUTURE COMPUTING

# The future is now

ILLUSTRATION BY DENISE BARBIERI

*Editor's note: Technology has moved out of the realm of science fiction and into the mainstream of everyday life. In the almost foreseeable future, electronics will be pushing us to expand our minds even further, thereby eliminating some more down home, old-fashioned prejudices. We must accept home information services, computerized homes and talking machines as the way of tomorrow's world, and even the redefinition of our work and family life. The future, Orwell-style, is now.*

It has now been a full decade since Intel introduced the first microprocessing chip, whose insignificant size belied the tremendous influence it was to have in the years to follow. In the early 70s, the personal computer held fascination for a very limited, specialized group of people—the hobbyists.

In the 80s, we are beginning to see a convergence in the fields of micro-

processing and telecommunications, heralding in a new era of advanced human capabilities, which are rapidly becoming accessible to an ever-growing segment of society. Laser and satellite technologies are advancing to the foreground of mass-communications techniques, creating an infant industry comparable to the microelectronics industry of five years ago.

This year's most recent computer shows, notably the National Computer Conference and the Consumer Electronics Show, held the spotlight for amazing new products, including machines that we can actually communicate with directly on a verbal level, through ordinary speech. This major breakthrough, led by such products as the Scott Instruments Vet-2 Voice-Entry Terminal and the Vodex speech synthesizer, "Type-'N-Talk," is bringing to computers a more sophisticated capability in dealing with their human counterparts.

With the Scott system, spoken dictation is automatically input to the computer. There is no need to type in text or data. Conversely, with Type-'N-Talk by Vodex (a Votrax company), the user simply types a word or phrase on a keyboard, and the machine speaks it aloud.

With ingenious products like these, we will begin to see home computers that are more human-oriented and more personable. With a little imagination, we can begin to create entirely new environments from these machines, wherein the primary emphasis is on interaction between the animate and the inanimate. We will be able to develop a conversational approach to home management, participating in the natural development of new forms of communication such as man to appliance, home to appliance, home to home and perhaps even appliance to manufacturer.

It is conceivable that within a matter of years the latter case could even become federal law. It could be

# FUTURE COMPUTING

ruled that any defective appliance must turn itself back in to the manufacturer via a toll-free line, or report immediately to its owner when a problem arises. Preventive maintenance of electrical appliances takes on a whole new meaning when those appliances are made to speak, and to understand speech.

While it is easy to see the practicality of machines that can help take care of themselves, especially when it comes to automobiles, the situation could also lull us into a false sense of security should we begin to believe these machines and appliances possess the power of judgment. No matter how far our technical anthropomorphism stretches, we must realize that there are still countless functions exclusive to the human race.

## House of the future

Many people are already aware of the benefits of computerization in the home in the areas of energy conservation and home security. One such computerized home is the Ahwatukee House of the Future, developed by the Motorola Semiconductor Group in a housing development near Phoenix, Ariz.

The house's system consists of a network of five personal computers, several closed-circuit television cameras and monitors, and various sensors that detect levels of temperature, humidity and motion.

For heating and cooling, the house is equipped with solar collectors, an evaporative cooler and central air conditioning, each automatically controlled according to input from the temperature/humidity sensors. Outside temperature is also monitored. The system then knows when it is most energy-efficient to automatically open or close the appropriate windows rather than activate an energy-consuming device. Optimal indoor temperature may then be maintained at the lowest cost.

The computer may also be programmed to turn various appliances and lights on and off at predetermined times. This derives maximum benefit for energy expenditures, using the concept of "load-shedding."

Security measures provided by the House of the Future include protection against fires and burglars through the use of smoke and motion detectors. The Ahwatukee home seems almost conscious at times.

Upon punching in the correct access code on a numeric pad to gain entrance to the house, the computer can be programmed to greet family members by name.

Home developers of the future may well have an entirely new selling point on their hands. Aside from playing up the more obvious features of a house, they may have to begin selling on the basis of the home's personality.

Although there are currently several personalized homes scattered across the nation, they all have a major drawback: cost. Computer technology is sufficiently advanced to handle personalized home features, but there is no standardization among appliance manufacturers to allow easy and inexpensive hook-up to a central home-computer system. Until this standardization is established, the cost will remain too high for the average consumer.

This concept of the "intelligent home" is frightening to many, and the thought of speaking machines is appalling. Why, then, are people purchasing more and more personal-computer systems, whether for use in the home or in business? The reasons are the same as for almost any purchase—the utility that may be gained from the product.

## Education too

In the past, non-threatening electronic entertainment was the primary utility derived from home computers. People enjoyed playing PONG when it was first released by Atari, and today, schoolchildren and adults alike are hooked on more complex computer games like "Dungeons and Dragons." More extensive applications for home computers were then perceived as acceptable, since consumers had been "warmed up" to the idea of computers through relaxing game-playing.

In addition to buying computer

The Ahwatukee House's personal-computer system controls lighting, heating and security.

# MORE BANG FOREVER

Forever is a long time and that's what Qantex Printers are designed to do, print for a long time. The new Qantex Impact Printers are perfect for applications where crisp copy is needed fast, reliably and at a modest cost.

The new feature packed Model 6010 incorporates a 2K or a 4K message buffer capable of accepting up to two full CRT screens of data. . . Switch selectable forms length from 3 to 22 inches in .5 inch increments. . . Switch selectable vertical tabbing, 4, or 6 lines. . . Horizontal tabs at columns 1, 9, 17, 25, etc. . . Adjustable tractors accept paper sizes from 3 to 15 inches, front or bottom feed. . . Multiple communications protocols accomodate parallel or up to 19,200 baud serial interfaces supporting RS-232, X-ON, X-OFF or current loop.

Other advanced features included at no additional cost include a sleek human factors engineered enclosure incorporating a low noise sound cover. . . Exceptionally high reliability resulting from simple mechanical and electronic design. . . 500 million character print head. . . High quality original plus up to five sharp copies. . . Beautiful 96 character set stored in the micro-processor in a 9 x 9 dot matrix. . . True lower case descenders and underlining. . . Bi-directional logic seeking. . . Built-in self test 150 characters per second. . . 80/136 columns per line. . . Available now!

For more information about the new Model 6010 contact your local distributor!

# Stop the Floppy Shuffle

## Announcing The David Hard Disk Subsystem

Compared to cassettes, floppies were the greatest thing since integrated chip. But with increased applications, data bases, and speed requirements, a lot of business people are spending more time doing the "Floppy Shuffle" and less time doing work.

Now with Konan's David Hard Disk Subsystem you can have 32 times the storage of a mini-floppy in about the same amount of space. At a cost per megabyte that really makes sense, the David Subsystem is available for a variety of micro-computers.

So if you own a personal computer, check into the David Hard Disk Subsystem at

your local dealer and stop doing the Floppy Shuffle. And if you want real timesharing capabilities, a networking card is available.

The David Subsystem is available immediately.

games, parents began buying home computers to aid in their children's education. These new computers are a welcome relief from television. They allow children to have fun while learning, and also help improve eye-motor coordination in the process.

Although a computer is not the best form of teacher, or even a suitable substitute for a teacher, it can certainly be an acceptable tutor for improving basic skills. Unfortunately, there is still a shortage of educational software available for home use. When this problem is remedied, and coupled with a nationwide computer-augmented communications network, we may well have a whole new "genius generation" on our hands who have instant access to an unlimited playground of knowledge. The ensuing generation gap between these "on-line" children and their parents will be unprecedented in human history.

## Accessing information

The value of the home computer in the future to the typical person will be this tremendous access to information, available through an intricate, intelligent networking system. The benefit of computer-augmented networking over our current telephone system will be that the intelligence will lie at the user's end, rather than with the central switching station. The user's needs will then take precedence over the system's needs.

For example, messages can be left in the system to be read or acted upon hours or days later, the speed and volume of information transmission increases enormously, and the network can be searched and scanned to pick up items of interest 24 hours a day. Individuals with specialized interests, whether they lie in neurosurgery or in following soap operas, will be able to communicate through their home-computer systems with others who share their interests.

Using this network, a person with the initial concept for a new invention could implement an around-the-clock scan search to locate and contact a person across the country who has the ability to further develop the concept into a reality. These two people could then use the same method to quickly get in touch with a third party who has the necessary funding to actually get the project off the ground.

This type of high-speed, two-way communication will ultimately result in a virtual explosion of innovative ideas, ready to be translated into new products and services.

For the past fifty years, we have been faced with the services of the broadcast media, which essentially offers one-way communication. The public has had little choice as to the information they received. Our new society will be based on two-way communication, with new forms of entertainment and information-gathering focused on interaction.

There are a few such network-based information systems available, including the Source and MicroNET. They allow hook-up between home computer terminals and a prime, or host computer, via the phone lines.

These services provide access to travel information, discount shopping, UPI and AP newswires, developing industry trends, stock-market reports and a plethora of other types of information—even how to select the correct wine for a special dinner. The Source and MicroNET also allow instant messages to be sent to friends, business associates or clients. Even though these systems may appear advanced, they are primitive in terms of what can be achieved.

What then, is holding us back? The telephone system in the U.S. is one of the largest, most complicated networks ever built. Even with this complicated machinery, the telephone is slow and expensive. It is inadequate for the transmission of a high volume of data, and poor for

large-scale conferencing. What is needed is a form of computer-augmented communication, coupled with satellite technology, to provide high-speed, two-way communication at low cost.

Cable television and video tape recorders are other communication devices that provide us with an insight to the future. We have seen that the consumer will pay a fee for a specialized service, such as first-run movies. The extrapolation is that if people will pay extra for this service, they will also be willing to pay a fee for each additional premium service they receive.

We can now begin to see the potential value of today's cable companies. The value of the cable is proportional to the perceived value of the service provided. The use of optical fibers or light cables could replace the coaxial cables used today, offering the benefits of significantly increased speed and volume of transmission at a decreased cost.

## Electronic watchdogs

Numerous experiments are currently being conducted nationwide and abroad with videotex, which, it is predicted, will link eight million U.S. homes with computer data banks by 1990. Warner Amex Cable Communications, American Telephone and Telegraph, Times Mirror Co. and CBS are but a few of the industry giants who have already invested millions of dollars towards developing this new phenomenon. The biggest selling point of videotex link-ups promises to be the concept of banking at home through the use of electronic fund transfers.

Instilled within our society is a basic mistrust of banking institutions. With videotex service from home, users could check their daily balances if they so desired, using the computer as a kind of "electronic watchdog" over their money. This summer, Citi-

# A DataStar<sup>TM</sup> is born.

Meet Melanie. She was a data-handling novice until she met DataStar.<sup>®</sup> Now, she's a star. Her revolutionary new system has taken her into a new dimension—and left all her old file cabinets, folders and paper forms behind.

Melanie's learning fast. She lets her DataStar do it all, up on the screen, from creating forms to fast accurate entry and retrieval. And when Melanie uses DataStar with MicroPro's other programs,

WordStar<sup>TM</sup> and SuperSort<sup>TM</sup>, she's a whiz at a lot more than data. Melanie can enter her data... merge, select and rearrange it... and then produce "personalized" mailings.

Discover what Melanie has. DataStar: the microworld's most comprehensive data entry, updating and retrieval system. Send for a free copy of our DataStar demonstration booklet by calling (415) 457-8990. Or

visit your nearby authorized dealer. Remember, when you're the star, we're the star.

# THE DAWN OF A NEW ERA FOR APPLE II: THE ENHANCER II

Introducing the Enhancer II: a new Standard which is improving the relationship between Humans and Apples. The Enhancer II can help your Apple II's keyboard become more sociable by remembering words or phrases which can be entered into the Apple by the mere touch of a key. Life can become even easier because the Enhancer II can remember what you typed while your Apple was busy talking to your disc (or doing other things). Naturally, it knows the difference between upper and lower case letters and what shift keys are supposed to do. It even knows to auto repeat any key held down. The Enhancer II replaces the encoder board making installation simple.

Suggested retail price: \$149.00.

## ■ VIDEOTERM

The time tested Videoterm 80 column card:

- 80 characters x 24 lines
- True decoders
- 7 x 9 character resolution
- Low power consumption
- Compatible with most word processors
- Softcard and CP/M compatible
- Modem compatible
- Most popular character set of any 80 column card
- Alternate character fonts available

Suggested retail price \$345.00

## ■ SOFT VIDEO SWITCH

The Soft Video Switch is an automatic version of the popular Switch-plate. It knows

whether it should display 40 or 80 columns or Apple graphics. It does the tedious work of switching video-out signals so you don't have to. The Soft Video Switch can be controlled by software. Any Videoterm with Firmware 2.0 or greater may be used with the Soft Video Switch. The single wire shift mod is also supported. Package price is \$35.00.

## ■ KEYBOARD AND DISPLAY ENHANCER

The original Keyboard and Display Enhancer is still available for Revision 0-6 Apples (on which the new Enhancer II will not fit). These Apples have memory select sockets at chip locations D1, E1 & F1. The Keyboard and Display Enhancer allows entry and display of upper & lower case letters with fully functional shift keys. It does NOT have user definable keys nor a type ahead buffer. The price is \$129.00.

## ■ ACCESSORIES:

Videoterm Utilities Disc \$37.00 (includes)

- Font Editor
- Pascal Mid-Res Graphics
- Applesoft Read Screen Utility
- Top & Bottom Scrolling
- Pascal Vidpatch
- Graphics Template (Expanded)

Character Set EPROMs \$29.00 ea

- Half Intensity
- Inverse
- German
- Katakana (Japanese)
- Line Drawing Graphics
- Spanish
- French
- Math & Greek Symbols
- Super & Subscript

Dvorak EPROM (Enhancer) \$29.00  
Lower Case Chip \$29.00

# The computer connection— local networks

**Networks don't necessarily mean ABC, NBC or CBS. Local computer networks provide quick access to information and increased storage capacity, and you can forget the antenna**

**F**ive years ago, if you were talking about networks, chances are you were discussing either ABC, CBS or NBC.

Times have changed. Today, networks play a major role in the daily schedules of doctors, lawyers, educators, architects, bankers and other professionals, and they don't have anything to do with television. What they *do* concern is computers, and these networks are changing the way a lot of professionals do business.

So just what is a computer network? Webster defines network as "an interconnected or interrelated chain, group or system," which is as good a definition as any. If you take

that description and apply it to personal computers, what you come up with is a process that allows users to pool the capabilities of a number of individual computers into one powerful system.

Local networking should not be confused with the traditional time-sharing method of accessing computer power. In time-sharing, many people are tied to a kind of network, but each user is limited to only one bank of stored information that is located in a large computer and accessed via telephone lines.

The key word here is "one." Since all users share a single computer, each person must take his turn to access the needed information. If a user

happens to require a piece of information in a hurry, he's out of luck because he can't plug into the computer until it's his turn.

Local networking gives each user his own computer to work with, providing him access to the information he needs anytime he needs it. It also connects all the users on the network, so that each person can communicate directly with other users whenever necessary. Finally, local networking provides for sharing of expensive peripheral equipment, such as high-speed printers and large-capacity mass-storage devices.

The introduction of the personal computer makes it possible for professionals to enjoy the benefits of

computerization at a price they can afford. Local networking takes all of those benefits and magnifies them.

### **A limitless market**

The market for local networking seems boundless. Virtually anyone in an office environment, doing a relatively high volume of business, stands to benefit from an in-house computer network. One has only to note the number of companies getting into the networking market to see how popular the technology has become. From computer industry giants to small start-up operations, everyone seems to be touting networks these days.

Three California firms founded within the past four years have man-

ILLUSTRATION BY LARRY ROSS

aged to accumulate a lion's share of the attention being focused on local networking. Nestar Systems of Palo Alto, Corvus Systems of San Jose and Micromation of San Francisco offer unique networking techniques that provide the user maximum performance for the dollar spent.

Nestar's Cluster/One Model A system provides the connection of up to 65 Apple II computers to a single network. The individual computers are joined via the Nestar Network Interface Card and multiwire cabling, for distances up to 1000 feet. Hooking up additional users is simply a matter of inserting an interface card into the Apple and attaching the necessary cables.

Users on the Cluster/One network get all the benefits of an Apple and a whole lot more. They can communicate directly with one another through their computers. They have access to many times the information-storage capacity available on an Apple II. Users also have access to one or more printers located within the network. After weighing these benefits, a businessman needs to know if his firm should computerize with networks.

A small business staffed by three or four employees is not a likely candidate for a Cluster/One system. But for a firm with a lot of employees who need quick access to a lot of information, the system is an ideal solution to the sticky problem of information management.

For example, Public Optical of Ontario, Canada, was drowning in a sea of paperwork a year ago. Before going down for the third time, it turned to local networking from Nestar, and solved its information problems in a few short weeks.

"We woke up one day to the fact that our business had outgrown the old-fashioned way we had been running it," says Herb Abrams who owns and operates the company with his

brother Frank. "We had a booming operation and we were trying to run it like a corner store."

Founded in 1949 by Abrams' father and uncle, Public Optical today is a major dispenser of eyeglasses in the Southern Ontario, Canada, area. The firm employs about 80 people in five locations, and each branch operates as a complete retail outlet and factory.

"We sell hundreds of pairs of glasses every day, which is great for business but a real nightmare in terms of keeping up with customer records," Abrams says.

## To the rescue

After handling all the growing customer files manually for years, the Abrams brothers finally threw up their hands and admitted that they needed to computerize the operation. After a few weeks spent researching all the alternatives, they finally settled on the Nestar system.

"At first we considered getting a basic small-business computer for each store, but we realized that for the larger stores we needed something that would allow us to support several terminals that access the same data base," Abrams says. "Nestar offered us a system that would allow us to start out small and then expand the network as the need came up."

The company's first priority was putting all customer files on the computer, which was no small task since those files had been building for 32 years. After that transition was made, the brothers went about putting the customer records of the two largest stores on the network.

"The smaller stores can be handled by the standard Apple II with a floppy disk, at least for the present time," Abrams says. "We anticipate putting them on the network as well if they eventually outgrow the Apple's capacity."

When a customer walks into one of Public Optical's two larger branches, clerks in locations throughout the store can call up the information they need in seconds to fill that customer's order. Are the glasses they ordered ready? Did they come with the tinted lens or the standard? Is the breakage guarantee in order? It's all there, right on the CRT screen.

## The personal touch

The new system has also improved what Public Optical likes to call its "personal touch" with customers. Abrams states: "When we get a new customer, we make up a complete file with that customer's name, address, prescription, type of frame and examination record. We then send that customer a notice every year or two, reminding him that it's time to come in for a check-up. This seems to help our business by letting the customers know that we're thinking about them."

Before installing the Nestar network and the stand-alone Apples, Abrams says the customer reminder was a "catch as catch can" attempt at efficiency. With all customer records written out in forms and filed away in cabinets, it was virtually impossible to give the personal attention for which Public Optical was striving. Today clerks ask the system which customers are due for a visit, and the information is output in just a few seconds. A printer attached to the network prints out the reminders and they're mailed promptly.

"A year ago, I didn't know what a network was," Abrams says. "Today, I wonder how we ever got along without one."

## Another approach

Like Nestar, Corvus Systems offers an economical approach to networking personal computers, both in its CONSTELLATION and in the recently introduced OMNINET sys-

tem. Each system is capable of supporting up to 64 computers on a single network. As with the Cluster/One, additional users can hook up to the system by adding interface cards and special cabling to their computers.

Both Corvus networks offer users access to mass storage in the form of Winchester disk drives that are shared by all users on the system. Users can also access expensive high-speed printers. Direct communication between user stations is another standard feature of both CONSTELLATION and OMNINET.

Unlike Nestar, which offers networking exclusively for the Apple, Corvus provides networking capability for a number of personal computers in addition to the Apple. These include Altos computers, the TRS-80 Model I and II, and Cromemco, Exidy and North Star systems.

One Apple II Plus user is Ted Boutacoff of Coherent, Inc. in Palo Alto, Calif. He decided that an in-house network was the way to go, and chose Corvus to meet his information needs.

Coherent is considered the world's leading supplier of laser-based products for the medical community, and the second leading supplier of laser products in general. Thus, the 15-year-old company has more than its share of business-related data to deal with every day. Particularly in the area of accounting, Coherent employees have long been pushed to their limits in dealing with the enormous amount of data that pertains to both the headquarters operation and those of subsidiaries around the world.

### **A bushel of Apples**

Before the idea of networking arose, the company had purchased a single Apple II Plus to handle budget data such as bookings, shipments, ex-

penses and profits. Then it became apparent that one Apple just wasn't enough.

"It didn't take long to discover that with all the budget information that had to be handled, putting the data on diskettes wasn't going to do it," Boutacoff says. His budget had already filled 70 diskettes and was growing when he made the decision to go with something bigger.

With the amount of information that had to be managed, time-sharing was not an efficient solution to the problem. The company needed a lot of storage capacity and fast access to the information that was being stored. The one solution that did make sense was an in-house network.

Coherent started out small. Two Apple II Plus computers were placed in corporate accounting and were tied into a 10-megabyte hard disk for additional storage. All the information from the 70 diskettes was transferred to the hard disk, making immediate access to all budget data possible.

Boutacoff soon found that two computer stations weren't enough. He expanded with three more computers in cost accounting, two in marketing/forecasting and one in engineering. He wouldn't be surprised to see that number grow.

### **More memory**

"We foresee a continuing need for personal computers and the type of mass storage afforded by the network system," he says. "A network based on personal computers offers everything we need to perform more efficiently. It offers a communications capability, mass storage, fast access and most of all, user stations that can either work independently of one another or as a team."

While supporting substantially fewer users than either the Nestar or Corvus networks (eight maximum), Micromation's M/NET system

offers a more powerful local-networking capability than the other two networks can provide. When using the Apple II on either the Nestar or Corvus networks, each user has independent use of 48 kilobytes of memory at a given station. Under M/NET, each user station is provided with 64 kilobytes of independent memory, in addition to the shared access to mass storage from the network's hard disk.

Unlike Cluster/One, CONSTELLATION or OMNINET, M/NET does not employ traditional personal computers at each user station. Instead, standard CRT terminals are installed at each station and 8-bit microprocessor cards are installed in a single cabinet for each user on the network.

Since each user is allocated his own central processing unit (CPU), accessing speed on M/NET tends to be faster than on other standard local-networking systems. In networks run by a single processor, the addition of multiple users tends to considerably slow access time.

One group of users, members of the Worcester, Mass., diocese, chose M/NET primarily because of this faster access time.

"For the kind of work we've been doing here, a multi-user system was absolutely mandatory," says the Rev. Donahue, who was instrumental in choosing a networking system for the diocese. The work to which Donahue refers needs what a local network can offer. From January to September 1981, a detailed census encompassing the entire diocese was taken. Collecting information on 335,000 people in 128 parishes was quite a task, involving the cooperation of more than 1000 church volunteers.

"The census is only taken every 10 to 15 years," Donahue says, "so the information we collect is quite involved."

*continued on page 73*

# The confidence builder.

Micro-DSS™/FINANCE gives managers the powerful financial software they need. Plus microcomputer convenience and economy.

With Micro-DSS™/FINANCE financial managers can dare to experiment. They can see what would happen if inflation continues at 12% or interest rates drop to 15%. They can ask numerous "what if" questions, consider their options—and confidently support their decisions.

Because for the first time Micro-DSS™/FINANCE gives the microcomputer user the power and features of large computer systems and time-sharing. At a fraction of the cost.

And it gives the potential micro user in both large and small companies a reason to turn to microcomputers—a full scale financial support system that's easy to use, readily available, secure, and flexible. In short, a system that doesn't compromise.

#### Micro-DSS™/FINANCE features:

- Many built-in financial functions—including depreciation, net present value, internal rate of return and amortization.
- Powerful editing and report writing features that make "what if" analysis and financial reporting easy.
- An automatically generated worksheet with blanks showing where data are needed to calculate the results of the model.
- Built-in graphics with a unique feature—you can retain them for later replay as a "slide show" on the monitor.
- Introductory Guide and User Reference Manual written for people with no computer experience.
- Model can run automatically once it is set up, so a person with no computer skills can run models and reports someone else has created.
- Full user support service

The Apple II Version of Micro-DSS™/FINANCE requiring 48K and Pascal is available now. Suggested retail U.S. price is \$1,500.

## PROFESSIONAL COMPUTING

# Easier economic modeling with personal computers

**Personal computers are being used by government bodies and corporate bodies alike to forecast economic futures**

Every business enterprise, whether it's a corner candy store or a multi-billion-dollar conglomerate, tries to look at the future. New opportunities and new limitations will come with changes in the economic environment. Future prosperity or even survival might well depend on the quality of the plans the company makes to meet the new conditions.

Every country as well must try to envision the future, much as a gypsy must study her tea leaves. Whether a government is studying macroeconomics, or a company is studying microeconomics, one thing is sure: There's a better chance of a more accurate reading if the information input goes into a computer rather than a teacup.

Until recently only large corporations were able to draw up forecasts—for themselves in the context of their industry, and in the wider context of economic conditions in general—that stood a much better than random chance of being

correct. The simple reason was that only a computer could crunch the numbers and juggle the variables to make acceptably reliable projections, and only a big company could afford to have a computer at its service.

That situation is quickly changing. Today a company with a medium or even modest operating budget can put the wondrous science of modern econometrics to work in practical, dollars-and-cents planning.

For example, your company manufactures grade-A gizmos and has a 3.5 percent share of the national market. If you increase prices slightly while doubling the advertising expenditure over the next year, what is the probable market share in the second quarter of 1983—in the view of the rates of inflation, interest, federal taxation and real economic growth—that are most likely to prevail for that time period? Suppose you decide instead to maintain advertising at the present level, but cut prices?

### Ergo, econometrics

Solving this complex problem would be hopeless without an econometric model, derived by applying mathematics and statistical methods that put known economic facts into the needed perspective.

Econometrics, having an awesome appetite for facts and for reconstituting the consumed information, is virtually hopeless without a computer to speed up the job. It's hardly infallible in

ILLUSTRATION BY DENISE BARBIERI

the usually assigned task of creating a picture of the future. A dramatic and unforeseeable reversal of trends—the 1974 oil crisis is a stark example—can destroy the best of premises and assumptions. But econometric techniques serve to educate guesses so well that no major corporation, institution or government body would make an important commitment of resources without consulting the read-out.

The advantages of using econometric models are now coming within the reach of a greatly widened number of economic entities, most notably small-businesses which have at least as much need for reliable forecasts as their larger competitors do. What makes it possible? Computers again, naturally. Not the big mainframes that are still beyond the needs and the budgets of smaller companies, but personal computers.

The personal computer systems available until about a year ago were too limited in power to even remotely approach the functions of large systems in providing data to support business planning. Advances in hardware and especially in applications software have narrowed the gap considerably.

Economist David M. Chereb, who has much experience with economic modeling on computers at both ends of the size-and-price spectrum, estimates that 90 percent of all companies can perform 90 percent of their business simulations on a personal computer. "Now you can do a great deal of sophisticated business planning with a personal computer," he says.

Chereb became a pioneer and apostle of the personal computer as a business-planning tool, even though he has made a career of working with some of the biggest and most powerful computers. He had a role in planning NASA's future space activities while in the Air Force, and became a senior economic analyst with North-

rop before taking his present position as manager of marketing systems for McCulloch Corp., the Los Angeles-based chainsaw manufacturer.

## Charting the course

Chereb's work at McCulloch includes forecasting the U.S. economy and creating programs for computer simulations as aids in the formulation of business strategies. A couple of years ago, while acting as consultant to help other parties in setting up computer-based forecasting, he became intrigued by the potential personal computers had to do much of that job less expensively for a greatly broadened part of the business world.

The personal computers of the time already had the essential capability with a few limitations a small company normally could tolerate, particularly in data-storage capacity. But relevant software was spotty and afforded no possibility of putting together a start-to-finish, macroeconomic-and-microeconomic system which would enable a company to chart the course of the economic variables of most concern, and to plan to react accordingly.

After designing the software he needed, Chereb started a company last summer to market two software packages whose output, when used as input for VisiCalc or other financial-modeling programs for a company's own "what-if" exercises, completes the macro-to-micro continuum of econometrics.

"The personal-computer user obviously makes a number of compromises in absolute terms," Chereb states, "but in relation to the more modest volume of data to be processed and a nearly equal quality of performance by the system, the small company actually gets far more value per dollar spent.

"The disadvantages of personal computers versus big machines," Chereb also feels, "include operability by just one person for one pur-

pose at a time, which isn't often a problem for a small company. Lower processing speed is another disadvantage, also not really important as the difference is counted in minutes rather than hours, and limited memory and on-line data-storage capacity are others. An inexpensive purchase of extra memory will carry a company a long way, and the addition of hard disks with Winchester disk drives, while not an inexpensive item for a small business, is an optional investment that would serve the on-line storage needs for a very long time."

In software for econometric simulations, large computer systems also have an inherent but not necessarily significant advantage in processing power. A typical 8-bit personal computer with 64k of random-access memory could run a macroeconomic model that incorporates a maximum of perhaps 50 equations to solve for economic variables. These variables include interest rates, consumer demand, unemployment levels, etc. In contrast, the commercially available models for large computers (Chase Econometrics, Wharton Econometrics, Data Resources and others), are provided to subscribers at an annual cost that can run well into thousands. These models use between 500 and 1000 equations.

The higher mathematical capacity might be valuable to a large company with some esoteric questions to answer, and it permits subdivision of the economy into more sectors. In Chereb's view, the equation-crunching ability of a personal computer is more than adequate for the normal needs of a company of any size. He settled on 30 equations in the final form of his macroeconomic model for small-to-medium sized business.

"An interesting statistical phenomenon," Chereb says, "is that the accuracy of smaller models for predicting, say, gross national product, is not directly related to the number of

# 4.4 MEGABYTES FOR YOUR APPLE

## Double-Sided, Double-Density 8-Inch Drive Capability is Here ... Now!

The new LOBO DRIVES Model LCA-22 Double Density Floppy Disk Controller has been specifically designed to match your APPLE® to the new double-sided, double-density 8-inch floppy disk drives. Now, you can add up to four 1.1 Megabyte drives (4.4 Megabytes total) and realize all the power and potential of your APPLE computer.

Completely Software transparent, the Model LCA-22 will plug into any chassis slot. You are no longer restricted to slot 7. And, the Model LCA-22 is fully compatible with 3.3 DOS and PASCAL. CP/M will be available soon.

LOBO's new LCA-22 Disk Controller and full line of field-proven, high-reliability disk drives (all LOBO products come with a one year, 100% parts/labor warranty) are available at computer retail stores nationwide. Stop in and see a demonstration at your local dealer today.

equations. Models with as few as five or six equations do fairly well at predicting GNP, and almost as well as models which contain 500 or 800 equations."

## Incredible capability

As a veteran of a big-business world that counts its computers by the roomful, Chereb is astonished by the overall capability of today's small machines. "Personal computers in the past three years have become almost equivalent to large machines in sophistication and flexibility," he says. "It's been possible because the hardware and software in the personal-computer field benefited from 20 years of development in data processing and didn't have to follow the mainframe development path all over again. Small computers started off pretty much from where the big ones had arrived."

At its present level of maturity, Chereb says personal computing is poised for "a significant surge rate in the development of decision support systems in software—aids for business decision-making." That aim is high on the agenda of a January conference in San Diego on "Modeling and Simulation on Microcomputers," organized by the Society for Computer Simulation.

Chereb foresees advances such as an economic/financial model for personal computers that integrates statistical functions, graphics, a report writer, a data-base management system and an English-like higher-order simulation language, all in a single software package.

The software developed and now commercialized by Chereb has many of the features of his anticipated dream package. It's actually two packages, a set of data handling and analytical programs called The Business Planning Package, and the macroeconomic part, called The U.S. Simulation Model. Both are presently compatible only with Radio Shack

computers, but will be adapted in the coming months for the Apple II and the many machines with CP/M operating systems.

The aim of the software system is to project the business climate for a company's products and to project the impacts of various factors on sales and the company's financial condition.

## The models

There are three modules. One forecasts national and regional economic conditions in parameters chosen for their known relevance to the company's fate: Interest rates and housing starts if you're in the construction business, for example, or inflation and consumer savings if you're a mortgage lender.

These outputs are then input into a second module to project sales and market share by product. Included in

this module is information on the company's marketing and advertising strategy, competitor's actions and other possible influences.

The third module is the financial simulation. When projected sales-by-product are entered, the output is a formalized income statement and balance sheet for the succession of periods covered by the sales projections, plus the company's major financial ratios.

That's what the system accomplishes. Operating time is about 20 minutes from the start of entry of the macroeconomic parameters until the final printout.

The econometric foundation for this system is the data stored on the national model disk, tracing the quarterly performance in each of the parameters back to 1955, and projecting up to eight quarters ahead according to modified Keynesian principles.

After new input, such as changes in tax rates, money supply, announced government spending and long-term growth estimated for the national economy, the computer model solves a set of simultaneous equations—the parameters are interdependent and inseparable—and then goes on to solve a block of recursive equations. The answer to each equation will knock down the next domino in line. The computer operator doesn't have to have an economist's head for current figures. They are updated as part of the software package and are also easily obtained from published sources including the weekly bulletins from the U.S. Department of Commerce.

The macroeconomic model is thus a sort of à la carte menu for forecasting the variables that will have a significant effect on the company's operating environment and business results, but are beyond the control of the company. The sales-forecasting model enables the company to put its own unique set of variables, including actions and trends it *can* control, into equations that will solve against the macroeconomic probabilities.

The outputs of the company sales-forecasting model are the projected sales by period for each product or product line, up to a maximum of about 30 products and 15 time periods within the capacity of a personal computer. If the module is used near its maximum capacity, it will likely have to be chained into or overlaid

*Call it instinct. Call it ego.  
Call it the perfect combination of  
Return & Romance.*

*Whatever it is, some ideas just turn a man on.*

You can get excited about HowardSoft products because they turn your computer on to a whole new world of high-speed, error-free tax and financial analysis. This labor-saving combination of your quality hardware and our quality software frees your time to do what you *want* to do instead of what you *have* to do.

**TAX PREPARER** by HowardSoft:

A package for year-long record-keeping and year-end tax filing; prepares returns for several forms & all schedules using on-screen facsimiles; prints in IRS format for filing; buy now and purchase low-cost updates at year end.

**CREATIVE FINANCING** by HowardSoft:

A flexible package for evaluating real-life loans & investments; provides cash flow & R-O-I projections as well as payment tables and objective decisions; can be used to determine yield to maturity of discounted bonds, present value of annuities stream, buy vs. lease decisions, APR of loans including wraparounds and analyses of all new loan types.

**REAL ESTATE ANALYZER** by HowardSoft:

A tool for objectively comparing alternative investments and projecting future results; professional in both analyses of cash flow & R-O-I and client-oriented report printouts; allows what-if studies for changes in property values, loans, rents, taxes, operating expenses and the value of money; perfect for cash and profit projections on new or old rental property.

onto the macroeconomic model, which is easily achieved on a disk system.

## Welghing effects

At this stage, the operator or the information user could halt the process to make changes in the input parameters and get new results. To use an earlier example, this is where the sales manager would manipulate the advertising budget at several hypothetical levels to see what effect each might have on future market shares.

The process is then ready for the financial model. This model allows two input options, desired sales or desired after-tax earnings, for generation of income statements and balance sheets to show projected levels of assets, debt and available dividends. The heart of this part of the system is decision rules to determine how the model will calculate the outputs.

Suppose, for example, the company wants to explore the future course of common dividend payouts. Once the retained earnings have been projected, there are three possibilities. In the low-earnings scenario, if the earnings available for dividends at a given time are less than the desired addition to retained earnings, the dividends become zero. In the case of very high earnings—so high that the amount remaining after additions to desired retained earnings would permit more than the maximum desired dividend per share—the decision rules might nonetheless limit the dividend read-out to the desired maximum. In the third and most typical case between the extremes, the dividend pool becomes the amount left over after targeted additions to retained earnings have been deducted from the projected current earnings.

"Because it's unrealistic to expect any model to forecast the future exactly," Chereb says, "a crucial feature of a planning model is its ability

to handle different scenarios."

Chereb says there are several sources of uncertainty that make it unwise to expect the gospel truth about the future from any planning model.

## Only partial gospel

The values of the inputs might be inaccurate. For example, the course of energy prices or interest rates assumed for the model might vary greatly from the actual events. The model's outputs will then be correspondingly in error. There is also some uncertainty associated with the coefficients of the equations. A coefficient for price, perhaps indicating that a 10 percent drop in price will lead to a 20 percent increase in unit sales, might make all the sense in the world according to sound statistical methods but still not yield the true price/demand relationship during the selected time period.

An econometric model also has some structural uncertainty. Because an attempt to include every possible variable and relationship among them would be impossible, one of the aims of the science is to weed out the less important variables so that those known to be important are more accessible for clear examination. But mistakes are still possible. For example, before 1974 few models included energy as a variable.

As Chereb says, "All models are simplifications of the real world. They try to include the major influences but do not include *all* influences. None of the sources of uncertainty can be entirely eliminated. The goal, then, is to try to reduce the range of uncertainty by careful model building and to use the simulation results as a guide to what probably will happen.

"Good planning models increase your odds of being right about the future," Chereb states, "and that's worth a lot of money for a company."

# Move Up to Tarbell

## *The Serious Business Machine*

Do you have a small computer system that operates with mini-floppies and has limited storage capacity? Then it's time to move up to the Tarbell Empire Series System. Tarbell starts where small systems leave off, providing storage from 1 to 20 megabytes. This means Tarbell is capable of growing right along with your business. (It also makes sense to start with Tarbell if you're a first-time computer buyer.)

Tarbell is the serious general purpose business machine, backed by years of experience with disk systems. It gives you word processing, inventory control with bill of materials, mailing lists — all in addition to accounting applications: general ledger, payables, receivables, payroll with cost accounting and order entry. Whatever your need may be, Tarbell can provide the working software that gets the job done.

With the Tarbell System you get a Z80 4 Mhz CPU with memory management, timer and full interrupt capability, 2 RS-232 serial ports with handshaking, 64 K bytes of random-access memory, double density floppy disk interface, 2 double density floppy disk drives, cabinet, power supply, and cables.

The software includes: CP/M™ 2.2 disk operating system, Tarbell Disk BASIC, Tarbell Database System, and all manuals and documentation.

Tarbell also offers the MP/M™ Multi-User Operating System and 4 additional RS-232 serial ports.

The Tarbell Empire Series is delivered assembled, tested, and with a FULL six-month warranty on parts and labor.

And when you need even more mass storage, Tarbell also has a hard disk that's system-compatible and provides easy back-up.

If your business is growing or you need more than a few hundred K bytes — it's time to move up to Tarbell. Call your local Tarbell dealer for competitive prices.

## Modeling the economy of Mexico

The government of Mexico decided to attack the problem of underdevelopment in the northern provinces by collecting a vast amount of localized economic data, analyzing the results and projecting trends. The analysis was to be used to identify industrial-investment opportunities which would then be brought to the attention of capital investors, particularly those from abroad.

A Mexican government agency asked Gillis, Haldi & Clarke, a New York consultancy, how to set up and execute the mammoth handling of information, which obviously required a great deal of computer power. Gillis, Haldi & Clarke, in turn, commissioned a specialized data-processing consultancy, McMullen & McMullen in Westchester County, to recommend computer systems and a flow of data tailored to the job.

"Why don't you deploy personal computers in the right place at the right time?" asked McMullen & McMullen. "They can pass data back and forth with remote mainframe computers, they're easy to move to new locations when needed, and after all the facts and figures are compiled, they're sophisticated enough to do the analysis. The cost is also much less expensive than any other means of obtaining additional hardware and software capability."

Taking this advice, Gillis, Haldi & Clarke installed three Apple II systems on behalf of its client, Direccion General de Promocion Fiscal. One system was first placed at the GH & C headquarters to coordinate the storage of existing data on a mainframe at Cornell University. A second Apple went to work at a field office in Mexico to prepare for processing new information that would be gathered in questionnaires for regional authorities and industry. The third became the Mexican government's first on-line personal computer. GH & C then trained Mexican personnel to operate the latter two systems.

The project is now in midstream, and the GH & C coordinator has packed his Apple along with his suitcase to stay in Mexico City for the duration. All three personal computers can now talk with each other as well as with a mainframe belonging to the Mexican government.

If the question of how to organize a project of such macroeconomic/microeconomic intricacy had been presented to John McMullen any time until the late 1970s, he would have automatically started devising mainframe configurations and communications paths. His career had been entirely in big-business data processing. He was dp manager for the Morgan Stanley banking and investment concern at the time he started the consultancy, and his wife and partner, Barbara E. McMullen, also had 20 years of executive experience in corporate data processing. For the McMullens and their large-corporation clientele, computerization meant big computers.

John McMullen continued his "big-computer" thinking until he bought an Apple II for his own use, and found it to be remarkably capable for such a small machine. Then he made an even more remarkable discovery: In addition to the early video games and some

straightforward practical software for such purposes as recording expenses, several software producers began marketing packages that would perform complex and sophisticated analytical tasks, which are especially helpful as tools for planning.

The turning point for McMullen was the introduction of VisiCalc by Personal Software. This financial modeling package serves as an electronic spread sheet, allowing the user to manipulate rows and columns of figures at will. From the time VisiCalc was first paired with Apple II, the McMullens have progressively reoriented their practice to the point where they now do 99 percent of their work with personal-computer systems—still primarily for a big-company clientele. They have recommended a variety of systems tailored to the intended applications, but most often have settled on Apple II because of its wide and mature field of supportive business-oriented software.

John McMullen is also excited by the advent of IBM as a personal-computer manufacturer. He regards the systems themselves as highly promising, and feels that IBM's prestige "legitimizes" a sector of computing that has been only vaguely understood by much of its potential market. "The IBM entrance should attract the attention of a lot of people who have been dubious up to now," he states.

*Personal Computing* asked McMullen how large a segment of the business community—large and small companies alike—he believes would share his present total conversion to faith in personal computers as instruments of analysis and planning.

McMullen says that the current level of awareness of personal-computers' performance capacity is "ten thousand times what it was a year ago, and we still haven't scratched the surface."

Even though a small company might well get the highest value by installing a personal-computer system for multiple functions that include planning, McMullen says that large corporations are much more aware at this point of what personal computers can do for them within the overall scheme of big-business.

Big companies have long been accustomed to having their big computers do the work of a thousand employees for bookkeeping and order processing, McMullen states, and these companies have given financial planners the lowest priority in the demand for computer time. It might be the fault of the planner who often doesn't know what he's looking for from the data.

But VisiCalc and a variety of other "what-if" instruments have come along, planners have had the opportunity to massage some data, look at the results and repeat the process if they don't like what they see—placing little or no burden on the company's dp set-up.

The corporations have been glad to oblige, in the experience of McMullen, who sees an anomaly in statistics that say an average American farm backs up its workers with \$40,000 of capital equipment per worker, and industry spends \$20,000 per blue-collar employee and \$2000 per white-collar employee. Personal computers have thus been able to locate "a marketplace that has not been tapped before."

## PROFESSIONAL COMPUTING

# Put yourself in control with personal computing

Small machines are finding use in control applications in the home and in industry

**A**s people become more accustomed to the idea of personal computing, they find there are more and more applications for their computers. While business applications like accounts payable and general ledger may provide the impetus for purchasing a personal computer, other applications are soon programmed for the machines. Some of these applications surprise people who tend to look down on the abilities of small, inexpensive computers.

One such application is control. Personal or small computers are used more and more for these applications. They're turning lights on and off, filling swimming pools in peoples' backyards and even controlling processes in large chemical plants.

Control applications can be very simple or very sophisticated. The more sophisticated the application, the more expensive its implementation will be.

Very sophisticated applications are often those that control many variables in a process. Signal feedback is used to control those variables. Systems that control chemical mixtures, or that control the angle of the ailerons on the wing of an aircraft are two examples. These systems work by comparing the value of a variable (the concentration of sulphuric acid in a mixture, for example), to the

value that variable should have. The desired value must be provided by the person who initially sets up the system.

A signal proportional to the measured value is then added to the signal representing the desired value. The sum of the two signals is now used as the new input to the process, causing the process to output a new value. The new value is then measured, and the measured signal is added to that representing the desired output. The process then repeats itself.

There is a very extensive body of theory on the use of these automatic-control systems. Many applications don't require a thorough understanding of that theory. Many control applications are simply on-off operations.

### In the labs

One of these basic operations can be used in a test laboratory. Engineers may wish to run a continuous test over a long period of time. To accomplish this test there are two options. One is to hire someone who constantly monitors both the equipment under test and the test equipment itself. The other is to use a computer that monitors both pieces of equipment.

Cromemco president Harry Garland applies the second option.

His company uses one of its own System Zeros to control the burn-in ovens at its plant. (Burn-in is the process of running electronic equipment at high temperatures for prolonged periods of time to catch failures occurring under these conditions.) The system controls the oven temperatures used in the process, and cycles from one pre-set temperature to another at specified time intervals.

Another user who applies the second option is Harvey Cogen. He is using a small computer for automatic control of equipment in a house/laboratory. This house/laboratory is used to test the effectiveness of solar energy. Cogen uses the computer to simulate the activity of a family who would be occupying the structure under normal circumstances.

To control the house, Cogen uses a TRS-80 personal computer as a "straight controller." The computer is used as a latched output port, which means that when a particular signal line from the computer assumes a particular value, that value remains constant (is latched) until the computer actively changes it on the line.

If at a particular time of day hot water is to be drawn from a holding tank, the computer will bring an output line that controls a valve on that tank to a level that means "open the valve." That line will activate a relay,

which in turn causes the valve to open. In some applications, the action is direct. In others, it occurs through the action of one or more relays, because the power required is more than the computer alone can handle.

### Keep it hot

"We were mainly concerned," says Cogen, "about the hot water. So we draw off hot water three times a day, but this is not our only testing concern. We have photocells on the roof that can generate 5000 watts of electricity every hour. To really test those cells we needed to provide a load. That's why we simulated the family's activity with the computer inside the house. It provides the variable load that can really show what the effect of the solar cells on the house will be."

This test house is not the only kind of laboratory that a personal computer can control. Bill Henry of Avondale Mills in Sylacagua, Ala., is using a computerized test system based on a Vector Graphic machine to test the quality of cotton fiber. The instruments that do the actual measurement were designed to hook up to an expensive minicomputer. Instead Spinlab (Special Instruments Laboratory located in Knoxville, Tenn.), the system supplier, was able to control the instruments with the lower-cost personal computer.

At the J.P. Stevens textile mill in Greenville, S.C., Spinlab had to con-

tend with the presence of an IBM central computer. Communications software had to be installed to "fool" the mainframe into "thinking" the Vector Graphic machines were intelligent terminals. Information gathered by the small computers in their instrument-controller role can then be fed to the mainframe for logging and processing.

Both of these latter examples show what is becoming one of the truths of computerized control. With enough diligence, people don't need to use hardware from one vendor to get the control system they want. For those who don't care to spend the time and money to custom program an application with different hardware from different vendors, systems are provided by a single source.

Carl Holberg and his computer-

Personal computers can be used to test cotton fiber, as at the J.P. Stevens textile mill and the Avondale Mills.

# The guy on the left doesn't stand a chance.

The guy on the left has two file folders, a news magazine, and a sandwich.

The guy on the right has the OSBORNE 1®, a fully functional computer system in a portable package the size of a briefcase. Also in the case are the equivalent of over 1600 typed pages, stored on floppy diskettes.

The owner of the OSBORNE 1 is going to get more work done—and *better* work done—in less time, and with less effort.

**Unfold it, plug it in, and go to work like you've never worked before. . . .**

Go to work with WORDSTAR® word processing, so your correspondence, reports, and memos take less time to produce, and say more of what you wanted to say. And with MAILMERGE®—the mailing system that turns out personalized mass mailings in the time you'd spend on a rough draft.

Go to work with SUPERCALC®, the electronic spreadsheet package that handles complex projections, financial planning, statistics, and "what if" questions instantly. For the more technically minded, SUPERCALC will process scientific data and calculate results.

Go to work with powerful BASIC language tools—the CBASIC-2® business BASIC, or the Microsoft BASIC® interpreter.

That's standard equipment.

Options include about a thousand different software packages from a host of vendors designed to run on the CP/M® computer system.

**Go to work at the office, at home, or in the field.**

Or anywhere. Optional battery packs and telephone

transmission couplers mean you need never work without the capabilities of the OSBORNE 1. That's good, because you won't want to work again without it.

**All for \$1795. It's inevitable.**

The OSBORNE 1 is the productivity machine that's changing the way people work. Put simply, the machine delivers a significant productivity edge—day in and day out—to virtually anyone who deals with words or numbers. Or both.

Since the entire system is only \$1795, it won't be too long before the guy on the left has an OSBORNE 1 of his own. The same probably goes for the person reading this ad. In fact, we think it's inevitable.

The OSBORNE 1 includes a Z80A® CPU, 64K bytes of RAM memory, two 100 kilobyte floppy disk drives, a business keyboard, built-in monitor, IEEE 488 and RS232 interfaces for printers and other things that get connected to computers, plus CP/M, CBASIC-2, Microsoft BASIC, WORDSTAR, and SUPERCALC. The system is available from computer retailers nationally.

**\$1795. It's inevitable.**

**OSBORNE**  
**COMPUTER CORPORATION**

26500 Corporate Avenue Hayward, California 94545

ized test house provide an example of a custom-programmed application. Holberg has some instruments that operate on the IEEE (Institute of Electrical and Electronic Engineering) 488 bus. This is a standard bus that was developed specifically for instrument control. The instruments all connect to the bus using standard connectors. (This is a much better standard than the RS-232-C interface standard. Many people say their equipment has an RS-232 port, but what that means in many cases is that the connectors will plug into the computer.)

Holberg has found that it's easier to operate with the IEEE-488 bus, despite the fact that manufacturers implement the bus differently. If a manufacturer makes 488-compatible meters and 488 controllers, he will probably have done some programming to make it easy to interface his controller to his instruments. A controller from another manufacturer will also be able to control the instrument, but it won't be as easy.

## The hard way

Holberg decided to take the more difficult route. He's using a Commodore 8032 with instruments from Hewlett-Packard to do the data acquisition on the solar house. (The house uses TRS-80s to control the on-off functions.) In this way, Holberg is making both simple and fairly sophisticated use of small computers in automatic-control applications.

The uses for control applications can get even more sophisticated, to the point where they can be used to run whole plants.

One user, we'll call him Harry Jones, has been working on a secret project that has the potential to yield vast profits for his company. Jones feels that this project is so important that he does not wish to divulge his real name or the name of his company.

Jones started with a Cromemco

system to control an entire chemical plant. He was familiar with the system's architecture, so he modified it. This was a fairly easy task since Cromemcos use the S-100 bus. What Jones finally came up with is a double computer in one box, using slots in the S-100 backplane. One of the processors is the "boss," or machine that allocates tasks and takes reports. The other processor is the "exec," the unit that really gets the work done.

Jones has a total of five machines connected in a network that act as remote computers for this boss/exec combination. That combination constitutes the real brains of the operation, and it's the one aspect of which Jones is most proud. "The real key," he says, "in what I regard as an elegant beauty is that pair of computers, one of which has no time-bound commitments in the system's operation other than receiving status reports. The other does all the work."

Jones says that the advantage of this pairing is its ability to make the total system "very friendly to the outside world. You can make a very powerful yet friendly system this way. That was my idea going in, and I'm really pleased that that's the way it worked out. In fact, it came out even better than I hoped at the beginning," he states.

This application, controlling an entire chemical plant, is very sophisticated. Other process-control applications aren't nearly as demanding. Acrolog, for example, a Torrance, Calif., machine-tool manufacturer, uses Apples to program its tooling machinery. The personal computers are too slow to run much of the high-speed machines, but they do eliminate the time that was needed before they were brought in to program the control machines themselves. The Apples are used to emulate the processors found in the tooling machinery. Programs can then be developed while the big tool machines are still on-line in other applications.

Lauretta Schaper also has a process-control application. As the co-owner of Awards, Inc. of Los Angeles, Calif., Schaper uses a TRS-80 Model II personal computer to run an engraving system.

## The way it was

Before the computer was brought into the shop, the company used a pantographic machine for the engraving process. This machine needed not only a typefont (letter templates) setup but needed to be adjusted for the size of the needed lettering. Each letter had to be set up individually, and the machine could only accept four lines of letters at a time. After the four lines were engraved, the letters were replaced in their storage locations and the process would start over again. This consumed both time and money.

Operators also had to set up individual letters in a rack, from which the machine would operate. If there were too many E's in the text to be engraved, the whole inscription could not be done at one time. Part of the text would be engraved, and then the setup was changed to finish the remainder.

With the use of the computer the picture has changed. The machine is about three times as fast as the old system, and operators can see exactly what will be engraved on the screen before the engraving starts. There is never the danger of running out of individual letters either. The letters only exist in the memory of the computer.

The only caveat in this apparently perfect picture is the cost. By the time all the parts have been added up, according to Schaper, the whole package including the cutters, the pneumatic equipment, the compressor and the computer runs about \$20,000. This equipment, purchased from Dahlgren and Associates in San Francisco, costs much more than the pantographic machine. But as

Schaper says, "We think that the system will have paid for itself in a year, or two at the most. After that, the system will last indefinitely. There's nothing to break down."

## What else?

The machine can also do fine calligraphy, writing on parchment, routing, burnishing and reverse engraving. The only thing it won't do for Awards is engraving on curved surfaces. For this reason, the company retains its human engravers. They are needed for silverware, bowls and other curved materials.

Another application similar to the one used at Awards is used by Cocem Laser Center, which makes parts for the aerospace industry. The parts are cut and welded with laser beams, and these beams must be directed to the proper place on the part. Instead of moving the laser beam to accomplish this, there is a moveable work table on which the parts are placed. The controller that moves the table is an Apple computer.

The Apple is also helping out with control applications not related to engraving or parts manufacturing. Last year, for example, the Joffrey Ballet in New York used an Apple to control the lighting for an unusually complex modern ballet.

The TRS-80 is another computer making headway in control. At the Sheraton Inn in Springfield, Mo., this unit is controlling the inn's utilities for a savings of 17 to 40 percent per year.

Texas billiard parlors are also benefiting from control applications. Klicks Billiard and Mickey Finn, Inc. both use personal computers—the former has Apples and the latter TRS-80s—to control the lights over the tables. In both Texas-based chains, when the table time for which a customer has paid has elapsed, the computer dims out the overhead light, giving an effective, albeit gentle, reminder that time has expired.

## Even around the house

Controlling functions around the house is another example of what else people can do with personal computers. Home control, which will be discussed in much greater detail in a forthcoming issue of *Personal Computing*, can be illustrated by the experience of Avery Dee.

Dee is the director of planning for Corvus Systems, a manufacturer of hard-disk and networking systems. One might think that his work environment gives him a leg up in implementing home control, but, "I'm not a programmer," he says.

What Dee did for his sprinkler system, almost anyone could do. "It was a labor of love," he says. "But really, it wasn't that much labor, because the software that drives the system (an Apple coupled with a BSR/X-10 controller through a controller card from Mountain Computer) is all menu-driven. I didn't have to sit down and write a program at all."

There were some things he did have to do. The first was re-vamping the hardware for the sprinklers. The next was answering the questions that came up on the system's menu.

Dee says that the sprinkler system needed work anyway, so while the repairman was in the area, he put some low-voltage solenoid-operated valves in place of the normal hand-operated valves. (These are electro-mechanical actuators.) Six of the new valves were distributed around the property, each of which can control five pop-up sprinkler heads. Fortunately, the valves were placed fairly close to existing 110V outlets, so connecting wire runs were fairly short. The longest was about 12 feet.

Dee then ran twisted-pair wiring (similar to that used for doorbells) to the outlets, where the wires were connected to plug-in transformers, on the 12V output side. The installation of the valves was complete.

With the transformers plugged through the BSR appliance module (there are two kinds, appliance and lighting) into the 110 volt lines, the hookup of the transformer to the computer was complete as well.

"It was great," Dee states. "Once that had been done, I had control of all 25 sprinklers and the fill valve for the swimming pool. All I had to do was boot up the control program."

After booting the program, it gave him the option of running several different sprinkling schedules to allow for holidays and other special occasions. The pool had to be filled Wednesdays, to account for loss through evaporation. That took a different program. Dee had added lighting modules to the system as well. He put in different programs to turn lights on and off at different times, depending on the day.

The controller also includes other features. Using a clock card for the Apple from Mountain, the system can recover from a power outage at the proper time of day. There's also a power-use accounting package that tallies up the power consumed by all the devices Dee has on the controller.

# LOGO COMPUTER SYSTEMS INC.

## A NEW COMPANY OFFERING A POWERFUL NEW DIRECTION IN MICROCOMPUTER PROGRAMMING

Today the world of microcomputer programming is opening up to people who never thought they would be able to program a computer. The microcomputer is fast becoming an integral part of the home, school and business environment.

The need arises for a programming language which is easy to use, yet highly sophisticated. That language is Logo. The Logo language was created after years of extensive research, led by Doctor Seymour Papert at the Massachusetts Institute of Technology. Working with Logo, brings to children, as well as adults, the opportunity to learn more about themselves and the world around them. Exploring rich and challenging new microworlds is what Logo is all about. At Logo Computer Systems Inc., we are proud of the fact that we have been involved in the Logo design and development since its inception. We are dedicated to providing the most qualified computer language support available.

The Logo language is now available for your Apple II Plus\* microcomputer. For further information write to us or contact your local dealer.

\*APPLE II PLUS IS A REGISTERED TRADEMARK OF APPLE COMPUTER

# BUSINESS COMPUTING

**Form 2106**  
Department of the Treasury  
Internal Revenue Service

**Employee Business Expenses**  
(Please use Form 3903 to figure moving expense deduction.)  
▶ Attach to Form 1040.

**1981**

Your name: **Raymond D. Granger**

Employer's name: **Brooks Publishing Co.**

Social security number: **141 67 5524**

Employer's address: **617 Westside Blvd, Brooks, ME 04532**

Occupation in which expenses were incurred: **staff writer**

**Instructions**

Use this form to show your business expenses as an employee during 1980. Include amounts:

- You paid as an employee;
- You charged to your employer (such as by credit card);
- You received as an advance, allowance, or repayment.

Several publications, available from IRS, give more information about business expenses:

- Publication 463, Travel, Entertainment, and Gift Expenses.
- Publication 529, Miscellaneous Deductions.
- Publication 587, Business Use of Your Home.
- Publication 508, Educational Expenses.

**Part I.**—You can deduct some business expenses even if you do not itemize your deductions on Schedule A (Form 1040). Examples are expenses for travel (except commuting to and from work), meals, or lodging. List these expenses in Part I and use them in figuring your adjusted gross income on Form 1040, line 31.

**Line 2.**—You can deduct meals and lodging costs if you were on a business trip away from your main place of work. Do not deduct the cost of meals you ate on one-day trips, when you did not need sleep or rest.

**Line 3.**—If you use your own car in your work, you can deduct the cost of the business use. Enter the cost here after figuring it in Parts IV, V, and VI. Base the cost on your actual expenses (such as gas, oil, repairs, depreciation) or on a mileage rate.

The mileage rate is 20 cents a mile up to 15,000 miles. After that, or for all business mileage on a fully depreciated car, the rate is 11 cents a mile. A car whose cost is being figured under the mileage rate is considered to have a useful life of 5 years. If in any year actual expenses are claimed using a useful life of less than 5 years, use of the mileage rate after that shorter useful life will be limited to 11¢ per mile. (For depreciation, see Publication 463.)

**Figure your mileage rate amount and add it to the business part of what you spent on the car for parking fees, tolls, interest, and State and local taxes (except gasoline tax).**

**Line 4.**—If you were an outside salesperson with other business expenses, list them on line 4. Examples are selling expenses or expenses for stationery and stamps. An outside salesperson does all selling outside the employer's place of business. A driver-salesperson whose main duties are service and delivery, such as delivering bread or milk, is not an outside salesperson. (For outside salesperson, see Publication 463.)

**Line 5.**—Show other business expenses on line 5 if your employer repaid you for them. If you were repaid for part of them, show here the amount you were repaid. Show the rest in Part II.

**Part II.**—You can deduct other business expenses only if (a) your employer did not repay you, and (b) you itemize your deductions on Schedule A (Form 1040). Report these expenses here and under Miscellaneous Deductions on Schedule A. Examples are union or professional dues and expenses for tools and uniforms. (For details, see Publication 529.)

You can deduct expenses for business use of the part of your home that you exclusively and consistently use for your work. If you are not self-employed, your working at home must be for your employer's convenience. (For business use of home, see Publication 587.)

If you show education expenses in Part I or Part II, you must fill out Part III.

**Part III.**—You can deduct the cost of education that helps you keep or improve your skills for the job you have now. This includes education that your employer, the law, or regulations require you to get in order to keep your job or your salary. Do not deduct the cost of study that helps you meet the basic requirements for your job or helps you get a new job. (For education expenses, see Publication 508.)

**Part V.**—If you trade in a car you used in business for a new one you also used in business, fill out lines 1 through 15. If you paid cash for the new car or traded in a car not used in business, fill out only lines 10 through 15. Refigure the basis for depreciation each year in the future that your percentage of business use changes.

**—Employee Business Expenses Deductible in Figuring Adjusted Gross Income on Form 1040, Line 31**

1	airplane, boat, bus, taxicab, train, etc.	
2	meals and lodging	
3	business expenses (from Part IV, line 21)	
4	outside salesperson's expenses (see Part I instructions above)	
5	Other (see Part I instructions above)	
6	Add lines 1 through 5	
7	Employer's payments for these expenses if not included on Form W-2	
8	Deductible business expenses (subtract line 7 from line 6). Enter here and include on Form 1040, line 24	
9	Income from excess business expense payments (subtract line 6 from line 7). Enter here and include on Form 1040, line 21	

**PART II.—Employee Business Expenses that are Deductible Only if You Itemize Deductions on Schedule A (Form 1040)**

1	Business expenses not included above (list expense and amount)	<b>personal computer, monitor</b>	<b>\$5850.00</b>
2	Total. Deduct under Miscellaneous Deductions, Schedule A (Form 1040)		

**PART III.—Information About Education Expenses Shown in Part I or Part II**

1	Name of educational institution or activity		Yes <input type="checkbox"/> No <input type="checkbox"/>
2	Address		Yes <input type="checkbox"/> No <input type="checkbox"/>
3	Did you need this education to meet the basic requirements for your job?		Yes <input type="checkbox"/> No <input type="checkbox"/>
4	Will this study program qualify you for a new job?		Yes <input type="checkbox"/> No <input type="checkbox"/>
5	If your answer to question 3 or 4 is No, explain (1) why you are getting the education and (2) what the relationship was between		162 <input type="checkbox"/> 110 <input type="checkbox"/>

# Tax-preparation software: how to ease the IRS blues

**A bevy of tax-preparation packages to ease the federal (and sometimes state) tax-time burden**

**I**t's almost that time of year again—not the holiday season, but the tax season. It's the time of the year that Uncle Sam is jolly while the rest of us pout.

Since the income tax was first levied, tax time has always been the bane of accountants as they labored long and hard with pencil and paper to squeeze every allowed deduction or credit out of their clients' tax returns. Accountants will attest that most of their time in this crazy season is spent doing essentially rote clerical chores or number crunching with a calculator.

Even those accountants in large practices that use remote time-sharing or batch-processed tax-preparation methods still spend long hours figuring alternatives for their clients.

Today, with personal computers, all of this manual labor and drudgery can be a thing of the past. Computers can crunch numbers more rapidly than a speeding bullet and leap through many alternatives with a single bound—if the computers have the right software to do these things.

Unfortunately, unlike basic accounting packages of which there are dozens, very few income-tax preparation programs are available

for personal computers. Even fewer programs are available for state and local income-tax returns. Of these, only the most populous and wealthy states are covered such as New York and California.

Why are so few programs available when the potential market for income-tax software is so large? First, the accounting profession at which most of these programs are aimed is notoriously conservative and seems loath to give up sleeve garters, eyeshades and ledgers to join the 20th century. Although the market potential is huge, it has been very, very slow to develop. One of the largest tax-software companies, Contract Service Associates in Anaheim, Calif., does not even solicit sales to accountants who do not already own a computer, according to Partner Earl Bivins.

The second reason why so few programs are available is that the income tax is extremely complex, and the number of forms and schedules which any moderately well-off person must file each year is also large. If you simply itemize your return, you have to file a Form 1040, Schedules B and A. If you have children and take a child-care credit, that's another form, Form 2441. If you figure your own tax rate instead

# BUSINESS COMPUTING

of using the tax tables, that's Schedule TC. Taking expenses as an employee requires Form 2106.

Income-tax programs are also unavailable because integrating the figures on the most common forms and schedules, and carrying results back to the proper places on Form 1040 is not an easy programming task. It requires the close cooperation of talented tax professionals and talented programmers.

The tax law also changes every year. For the third time since 1976 the federal tax law has been significantly changed. Since the Internal Revenue Service never finalizes the changes until late October or early November, programmers find it very difficult to modify the income-tax software and get it running perfectly before the tax season begins on January 1.

Apple Computer, for example, issued a "Tax Planner" package in 1980 for the 1979 tax year, but did not perfect it and get it to market until half way through the tax season. It is not doing a similar program for 1981.

Although these difficulties prevent many software houses from getting into the tax-software business, a few have ventured boldly forth with surprisingly good results. Those few available tax programs offer a variety of approaches to tax planning and preparation. For example, Contract Services Associates, CPAids and Howard Software Services primarily serve income-tax preparation professionals with programs that prepare complete returns, including a number of forms and schedules.

Aardvark Software offers an income-tax planning package that allows an investor or accountant to consider various investment and income alternatives and their tax consequences. By using "gross" numbers or totals and not necessarily actual figures, one can study the effects of changes and consider the

answers to "what if" questions. You can't do more than basic Form 1040s with this package.

## Another approach

Micromatic Programming Company takes a third approach. Its package was originally designed to help fill out an individual income-tax return. For 1981 the company has upgraded its software so that tax preparers can use it for Forms 1040 and short-form 1040A.

At the state and local level, E-Z Tax Computer Systems in Monsey, N.Y., represents a good example of how smaller software houses face tax season. E-Z's State Income Tax Programs integrate with CPAids' Master Tax and General Ledger II. Because both New York State and New Jersey tax forms take most of their information from the federal Form 1040, the computer automatically calculates most of the state tax results with little help from the user.

## Preparation problems

Deciding among tax software may be difficult unless you study each package and determine which best fits your business needs. None of these packages is perfect. None handles every schedule and every form, although the "big three"—Contract Services, CPAids and HowardSoft—add new forms and schedules each year.

When reviewing these packages, analyze your tax return to determine which forms and schedules you use most often. Then refer to the attached table to find out which package processes which forms and schedules.

For example, perhaps your firm has a large number of retired clients, and you fill out a lot of Schedules R & RP for retired persons. Only HowardSoft and CPAids include that schedule in their packages. If you do returns for many families

with children and you use a lot of Form 2441 for child-care expenses and tax credit, it is important to note that only Contract Services includes that form in its package.

After reviewing the options, what do you do if a package you buy doesn't process a form or schedule you use? You simply go back to pencil and paper and insert the results on the Form 1040. If you mainly do complicated returns for wealthy individuals, you may have to do a few esoteric forms by hand. If your business is concentrated on individuals, families, the self-employed and small-businesses, the three main packages should handle 90 percent of your requirements. Micromatic and Aardvark can easily handle the routine Form 1040 and 1040A business.

## Printing pains

If choosing a good package wasn't hard enough, the IRS has tossed in a curve that seriously complicates using computers to prepare tax returns. You should expect the greatest savings of time and clerical costs when the computer automatically prints out completed forms and returns. Thanks to the IRS, it's not that easy.

The IRS has strict rules on how tax returns can be prepared by computer. The strictest rule and the biggest problem is that all Forms 1040 must be submitted on a preprinted form. It sets strict formats by which the remaining forms and schedules must be printed. The IRS also requires lined or barred computer paper for the schedules and forms. Contract Services, CPAids and HowardSoft all include print routines that meet these IRS formatting requirements.

To alleviate this problem you could print one Form 1040, and then change the paper and print the remaining forms and schedules with a tractor-feed attachment. If you or

**Don't make your  
computer old  
before its time**

## **Now there's Palantir™ — Word Processing and Accounting Software for Today's Computers**

You've just gotten a brand new computer. Don't tie it down with old software. Two-year-old software will make it run like a two-year-old computer.

The microcomputer industry is the fastest growing, most exciting industry in the world. Today's printers, terminals and disk drives can do things no one even dreamed of two years ago.

But a computer is just a dumb piece of metal until software gives it life, and, unfortunately, microcomputer software has not kept up with the hardware.

Until now.

There's a commonly held belief that you should not buy new software because it hasn't been tested. We say, "Hogwash!"

At one time those complaints might have been valid, but the software industry has come of age. We do our testing *before* we release a product, not afterwards.

More importantly, we've learned that quality cannot be

tested into a product; it must be *built* in from the beginning by people who know what they are doing.

And we do.

We formed Designer Software because we believed that the quality hardware of today demanded software of equal quality. It took a lot of time, sweat, money, care, experience and talent to make that belief a reality.

We set high standards, but our team of CPA's, systems analysts, programmers, writers, artists and marketers that created *Palantir*™ Word Processing and Accounting have exceeded all of our expectations.

*Palantir*™ is the most professional packaged software ever to be offered to the CP/M® market.

We don't expect to convince you of that with just one ad, and we won't try. But if you're in the market for business software, we hope we've convinced you to find out more about *Palantir*™ — today's software for today's computers.

For more information and the name of a dealer near you, please write, call, telex or use The Source. Dealer, distributor and OEM inquiries invited.

your clerks do change paper, and remove and put back the tractor mechanism every time you print a return, you will lose much of your time and cost savings. Fortunately, software houses have devised acceptable ways to remedy this drawback.

Contract Services, for example, describes four ways to carry out the printing process. HowardSoft identifies a fifth. The company advises you to choose the method that best fits your office operations. First, if you have a photocopier and use it frequently, you may favor using overlays. You load the printer with fan-fold blank paper, and the printer prints the figures for the Form 1040 onto the blank paper in the appropriate locations. You then place a transparent overlay copy of the Form 1040 over the printout and run it through your copier. Contract Services says that half of its several thousand customers use this method.

Second, if you don't mind the expense, you may want to use two printers, one for batched 1040s and one for supporting forms and schedules. You may need special cables and hook-ups to accomplish this, and it may be too expensive for small offices. If your firm does hundreds of returns a year, however, it may be a good idea because of the time savings and the recouped copying costs.

If you have a small office but no copier, you can also feed one sheet at a time using snap-out forms with carbon inserts for the Form 1040 and blank paper. This is best if you intend to do a complete return with supporting schedules and forms at one sitting.

The fourth printing method involves a long, laborious process. Sheets of paper are inserted in the printer one at a time, and the printing parameters are changed for each run. Perhaps someday the IRS will see the folly of its requirements in a

day of high-speed printers and change the rules, but it may not be soon.

HowardSoft also notes that pre-printed, tractor-fed, continuous Form 1040s are available from office and paper suppliers. This last printing method allows you to batch-print all of the 1040s at once, and then do schedules and forms separately, but you cannot complete one return at a time.

## Seven packages

When you have decided which printing method is best for your business, you must then decide which package meets your requirements. The programs discussed below have not been finalized for 1982. They were not complete by mid-October, and all discussions of manuals and actual program operations are based on 1981 packages. The new features for 1982 are discussed as described by the software houses themselves.

Aardvark Software's **Individual Tax Plan** is a sophisticated federal income-tax planning program for the Apple II Plus or the Western Digital Microengine with Pascal. Written in Pascal, it can be used with the Apple II Plus with the Language System, or Apple Pascal. It has a versatile format which allows you to study five alternatives at a time, and leads you through a complete Form 1040 line by line. Rather than simply stepping through the form, you can use a set of commands to go to any line at any time on the Form 1040. You can go from line nine to line 68 and back, for example, or use forward and backward commands to step line by line. Up and down commands let you move within lines in any of the five alternatives.

Although this feature is useful, the program's VisiCalc-like features are even more so. With one-letter commands you can increase the amount of an alternative with com-

pound or simple interest, or add equal increments to a base figure (add \$10,000 to \$20,000, etc. for four more years, for example).

Like the other tax programs, Aardvark's package produces automatic computations for federal-tax liability, income averaging, maximum tax on earned income, minimum and alternative minimum taxes, capital loss and gains, etc.

It took just a few minutes to follow the examples given in the high-quality users manual, and to produce accurate results with simple figures. The manual is well-written and easy to understand, even for a non-accountant. Aardvark also includes very clear photos of the actual video screens in the order they would appear, with the results of using the commands.

As a tax-planning tool, this package does not print forms and schedules, but does print the results with all of the alternatives side by side. It deals only with gross totals, not the separate calculations required to get them. The results from the preferred alternative can be easily transferred by hand to the Form 1040 and other forms and schedules.

For 1981, Aardvark has added several new computational functions which allow you to do even more sophisticated analyses while using the package to complete the basic tax forms.

If you are a financial or tax advisor, this package can be a handy, though limited tool to accomplish planning objectives for your clients with more complex tax problems.

Contract Services Associates' **Professional Tax System** is one of the best and most complete packages available. When the 1982 version is available, it will be completely updated with all of the 1981 changes, and will include several new features.

These new features include "QWIKTAX," a fast tax calculator

## YOU ASKED FOR IT!

### The 1982 Edition of **TAX PREPARER** by HowardSoft

You made us #1 in tax software last year. You spread the word when we were new and unknown to your local dealer. Now we're repaying you by adding all the new features you requested in your helpful letters of encouragement. With our new software and an Apple Computer you can prepare error-free returns in minutes rather than hours and maintain records for next year too.

**On-screen facsimiles** — no new data entry methods to learn; enter raw data on forms & let computer perform all the math.

**Auto-updating** — changes in one form reflected in all others for immediate error correction.

**Tax book-keeping** — long itemized lists accommodated with numbers easily changed from month to month or year to year.

**Tax planning** — rapid estimates of tax bite without laborious completion of all forms.

**Complete set of forms** — 22 forms & schedules including min. & max. taxes, income averaging, capital gains, depreciation, farm, rentals, & more.

**Up-to-date** — includes the new 1981 forms and automatic calculation of the new ACRS depreciation schedules; and low-cost annual updates keep you current.

**Error-free computing** — tested all year by hundreds of tax professionals.

**Fully error tolerant** — trouble free operation for the computer novice.

**Prints on preprinted 1040s** — continuous form (batch for all clients) and single sheet operating modes.

**Prints IRS-accepted facsimiles** — improved formats for multi-client printing and trouble-free filing with the IRS.

**Companion state packages** — separately priced add-on for selected states uses federal data as starting point; no need to re-enter data.

**Extensive instructions** — manual greatly expanded and rewritten for clear guidance through the web of IRS forms and schedules.

8008 Girard / Suite 310 / La Jolla, CA 92037 / (714) 454-5079

Two ways to get the **NEW** package for Apple Computers:

1. Buy 1981 Edition now at your dealer for \$99 and purchase updates on Jan. 1, 1982 for \$35. (Enter data now, before the busy tax season starts.)
2. Buy 1982 Edition at your dealer after Jan. 1, 1982 for \$150.

What else?...Creative Financing & Real Estate Analyzer.

## BUSINESS COMPUTING

using basic information; "Total W-2s," a utility program that adds up and carries all W-2 form totals to the 1040; and Client Billing, a self-explanatory utility program. Also included are four new schedules, including Forms 2441, 3468, 5695 and 4797 which carry their results to the 1040; and a feature that counts the number of returns you've completed.

This system, designed for any of the TRS-80 models, is the most extensive of any available package with more than 500k of program code. It has been divided into separate program modules, with Form 1040 and Schedule A the base program. You have to buy other modules to get other schedules and forms, and run them one at a time.

### Info transferred

The base module is structured so that all information from any form or schedule is stored in memory. It is then transferred to the appropriate line on Form 1040 when the base module is again placed in the system. This works very quickly, and eliminates a lot of troublesome data re-entry. It will also lead you through the 1040, and take you to the sections or parts you need to complete to get net results.

For example, on the income summary it asks for "adjustments to income." If you answer yes, the program will automatically go to lines 23-29 for the proper figures. At the end, it will calculate the results and post them in line 31. If you answer no to the adjustments question, it will compute line 31.

This calculating speed is the main advantage of any tax program. This program will do an income averaging Schedule G form in 3 to 8 seconds, depending on its complexity. As any tax preparer knows, using a calculator to do the same thing is rough, says Contract Services' Bivins.

Contract Services' manual is written in a breezy style, and for the most part, avoids computer jargon. It does assume some knowledge of how a TRS-80 works and how its disk stores data in "grans." (Grans are groups of bytes of a specific size.) Although its program code is the most extensive, its manual does not contain enough step-by-step information, and its narrative style would be somewhat more difficult for a clerical staff member to use than for others.

This style does not detract from the obvious professional competency with which the program was written, and it does not detract from its powerful features.

CPAids' **Master Tax** program is probably the best-known tax-preparation program. It includes the largest number of forms and schedules of any package, although it does not have a few which its competitors provide.

For 1982, CPAids is the first to add the Corporate 1120 program to its line. It includes pages 1-4 of the Form, schedule D, forms 3468, 4797, 4874 and 5884. It features a new screen formatter with cursor control, and stops incorrect entries with extensive error trapping.

The 1981 package and manual were reviewed. In addition to automatic calculations of the information given, the program chooses the best alternatives for employee business use of a car, sales-tax deductions, itemized deductions or zero-bracket amounts and the best tax-calculation method. It carries medical-percentage limitations forward, earned-income credits, city/state tax to Schedule A, dividend exclusions and capital gains, depreciation to three schedules and two forms, installment sales, etc. It also stores historical information about each client on disks for editing or for next year's computation.

The CPAids package is structured

in a helpful way. It starts with the Form 1040 into which you enter basic information such as names, statuses and exemptions. Depending on your clients' figures, it will then branch to Schedule B, return to the 1040, and go back and forth between various schedules, forms and the 1040 in sequence, with the appropriate lines on the schedules and forms carried back to the 1040. This structure generally follows the structure of the 1040, and the schedules and forms can be used or overridden as required.

CPAids advises using its "input forms" to prepare the forms and schedules before the data are entered. The company charges \$50 for 50 complete sets of forms and schedules. This step is unnecessary with both Contract Services' and HowardSoft packages.

### Good documentation

CPAids does have a very good manual that leads the user step by step through all of the forms and schedules it includes. The instructions are on the right-hand page and the actual form is presented on the left-hand page. The same information, as it appears on the video screen, is presented below the actual form. An instruction line is noted in the appropriate space on the corresponding form or schedule. This approach makes the program very easy to use, if somewhat tedious, but leaves no stones unturned. It assumes that people unfamiliar with both tax-return preparation and computer operations will be using the program.

Finally, the Master Tax program integrates to CPAids General Ledger II program through an interface with Schedule C. It also maintains depreciation all year with a program included in the package. Depreciation figures can then be carried forward to schedules C, E and F, and to Forms 3468 and 4255. In the Cor-

porate 1120 package, general-ledger data can be brought from the GL package to the income and balance-sheet sections.

Howard Software Services' **Tax Preparer** is a very inexpensive but useful tax-return program for small offices. It takes a tax preparer through the Form 1040 line by line, and includes a useful scrolling function that allows you to move forward through the program. The scrolling function also automatically repeats all calculations and corrects the figures if you made any editing changes.

The program's step-by-step structure is easy to use. It has a built-in capability for editing each line, and allows you to skip whole sections of each form with one keystroke, a good feature for filling out supplemental forms and schedules.

### 1040-like

The structure is based on the setup of the 1040, and you must fill in the appropriate spaces on the 1040 for the supporting schedules and forms and calculations to be correct. You fill out the 1040 line by line until you come to a line on which a result from a different form or schedule is required. You then go to the end of the 1040, remembering the form number, and return to the menu. You choose the correct form or schedule on the menu and fill it out. After it has been completed, the results will automatically be posted in the correct line on the 1040.

The manual is written in a narrative style. Although it is professionally done, it is harder to use, requiring more reading and study than a step-by-step method, especially when you want to refer to a specific item you've forgotten or a mistake you need to correct. It does, however, take you through a sample return first, and then advises you to fill out your own return before

# The pfs: software series\*

*\*Now available for  
APPLE III  
see your dealer  
for details.*

## A Personal Information Management System.

Your APPLE\* computer really can track purchase orders and inventory, analyze your investment records, maintain client and patient histories, or even catalog magazine abstracts and your stereo collection. Software Publishing Corporation has the answer and it doesn't require programming!

We call it the PFS software series—an easy to use yet powerful set of programs that let you design a system that's versatile enough to manage almost any kind of information.

PFS, the personal filing system, let's you design your own form on the screen for organizing information. Once it's created you just fill in the blanks. Looking up what you've filed is just as easy. PFS can search for a number, a single piece of data, a word within a page of text, or any combination. All forms that match are displayed on the screen for browsing, updating, expanding, or printing. PFS can even create mailing labels.

PFS: REPORT, the personal report system, uses the files PFS creates to produce a report tailored to your

specifications. Just mark the information you want listed and PFS: REPORT will sort it and let you specify headings, totals, averages, counts, and calculations. You can save your report design for use on a regular basis.

PFS and PFS: REPORT come with simple self teaching manuals plus a support plan that includes program updates and factory experts ready to answer your questions. And all of this at an affordable price. Each program is priced below \$100.00.

The PFS software series is different. It is not a specialized application package nor a complex programmer oriented data base manager. It's a personal information management system that lets you store, retrieve, and report information your way without programming. The PFS software series is avail-

able through your local dealers. If they don't carry it have them give us a call at (415) 962-8911 or write to us at Software Publishing Corporation, 2021 Landings Drive, MtnView, CA 94043.

\*requires a 48K, 16-sector disk based  
APPLE II system

## BUSINESS COMPUTING

# Voice of the IRS: can computers be deducted?

**Instead of taking the cost of your personal computer as a loss at tax time, help defray those expenses with new tax-relief options**

The decision to invest in a personal computer can bring financial worry lines to the brow of even the most liberal equipment buyer. There is the initial cost of the system to be considered. Software prices must be weighed, and finally, taxes on the system must be paid. However, relief for these financial considerations is forthcoming in the form of tax deductions.

Some people consider tax deductions as "loop holes" or ways of escaping the payment of one's fair share. Knowledgeable people, however, are realizing that a loop hole is really a "tax relief," and it is one's right to benefit from legal tax deductions.

One reason to take advantage of tax-relief programs is the high cost of the computers and software. Not only does a person pay \$1500 for a personal computer, but, depending on his tax bracket, he has to earn an additional \$500-700 to cover the taxes on that \$1500. The total equivalent cost is then \$2000 to \$2200, not including sales tax. Wouldn't it be more economical to be able to deduct the full price of a personal computer?

There is a way that the cost of a computer, software and support systems (for example, electricity and in-

surance) needed for operation can be deducted. All that is required is an itemized tax return and fulfillment of the deductibility requirements of the IRS.

Most business people know that the majority of expenses related to running a business (income) are tax deductible. But what about the home-computer user who does not own his own business? Can he deduct his computer system?

If the home user is a teacher, clerk or is employed in just about any occupation, there is a possibility of deducting the cost of the computer on annual income taxes.

The Economic Recovery Tax Act, passed on August 13, 1981 does not permit a full write-off of computer equipment purchased in 1981. However, these computers are eligible for the new method of depreciation, called the "Accelerated Cost Recovery System."

Under this new method, computers are depreciated over a five-year period, and if the equipment is used for research and development, it can be depreciated over a three-year period. For computers purchased in 1981-1984 covered under the five-year depreciation method, the first year's depreciation rate is 15 percent

of the total cost. For the second year, the depreciation is 22 percent, and for the last three years the depreciation rate is 21 percent. Thus, the entire cost of the system is deducted over the five-year period.

This new depreciation schedule makes it possible to recover the cost of the computer system more quickly than was possible under the old laws. Says Tony Bombadiere, a spokesman for the Internal Revenue Service, "The reason why we gave a shorter depreciation time-span is to give the user an economic advantage in recovering the cost of the equipment. Before, depreciation was based on the economic life of an asset. If the economic life was 20 or 30 years, you had to depreciate over that amount of years. Now the time frame is set by law and there's no question about whether the equipment has a 20- or 30-year life."

Another provision of the new laws provides for the deduction of the first \$5000 of business equipment purchased in 1982 and 1983. Thus, computer systems purchased during these years could be fully expensed in the same year, but no investment credit is permitted on these purchases. If the cost of the equipment is greater than the deduction allowed, the excess cost

# BUSINESS COMPUTING

is eligible for the new depreciation method.

These laws imply that if you have a trade or business—in other words, you earn money—and a personal computer helps in that trade, then it may be deducted. First, however, the computer's use in your occupation must be established.

## What to deduct?

Before preparing the actual tax return, you must consider what deductions are permitted by the IRS. For example, deductions such as heat, electricity and facility maintenance can only be claimed if you are self-employed and your home is your principal place of business; or, if you are an employee and are required to work at home because your employer cannot provide you with adequate working space. Also, Bombadiere says, "In order to qualify for the home deduction, the room where the equipment is housed must be used totally and exclusively for business. That's the only way that home deductions can be made." However, the actual computer may be deducted by an employee who chooses to work at home, provided the equipment is used for business reasons. If a portion of your residence is deducted for computer support, a copy of a photo of the computer enclosed with your tax form would be helpful.

When deciding what other items may be claimed, note that new skills do not qualify for a deduction (for example, a plumber learning to become a programmer). But, deductions for the maintenance of one's skills (for example, a teacher learning a math-education program), do qualify. Also, substantial sales taxes are often an added source of deduction, especially on a large purchase.

Another qualification the IRS takes into consideration is the incidence of use—how much time you actually use the computer for your

business. Although, as Bombadiere states, "The computer is like a Xerox machine in the office. We don't say you have to use it four hours a day or one hour a day. If it's used for business purposes it's deductible." However, using your computer as an adding machine as a once a year income-tax calculator would probably not allow a deduction. The key is using your personal computer as a business tool, which implies fairly constant use.

For the question of deducting telephone (modem) support of a computer, it is well advised to consult a knowledgeable accountant.

## The tax forms

After giving serious thought to the deductions for which you may be eligible, the time comes when tax forms must be filed. Depending upon whether you are self-employed or employed by another, different forms are used.

If you are self-employed and use a computer for your work, all computer-related deductions are listed on Schedule C, a profit and loss statement (expenses are deducted from income). On this form, deductions such as heat, electricity and home (office) maintenance are allowed.

For people who are required to work at home because their employer has insufficient space, home deductions are also permitted. However, Form 2106 must be used to allow a listing of these employee-related business expenses.

Finally, if you are an employee and choose to use your personal computer at home, Form 2106 is also used. Thus, you can deduct the computer, printer, etc., as long as you can establish the use of this equipment in your occupation.

Should the IRS question your deductions (and it can question any deduction), you will probably receive a letter asking for further expla-

nation. This is your chance to explain how the computer helps you make money in your existing occupation. Should that not be sufficient, then a personal meeting and frank discussion with IRS personnel may be necessary.

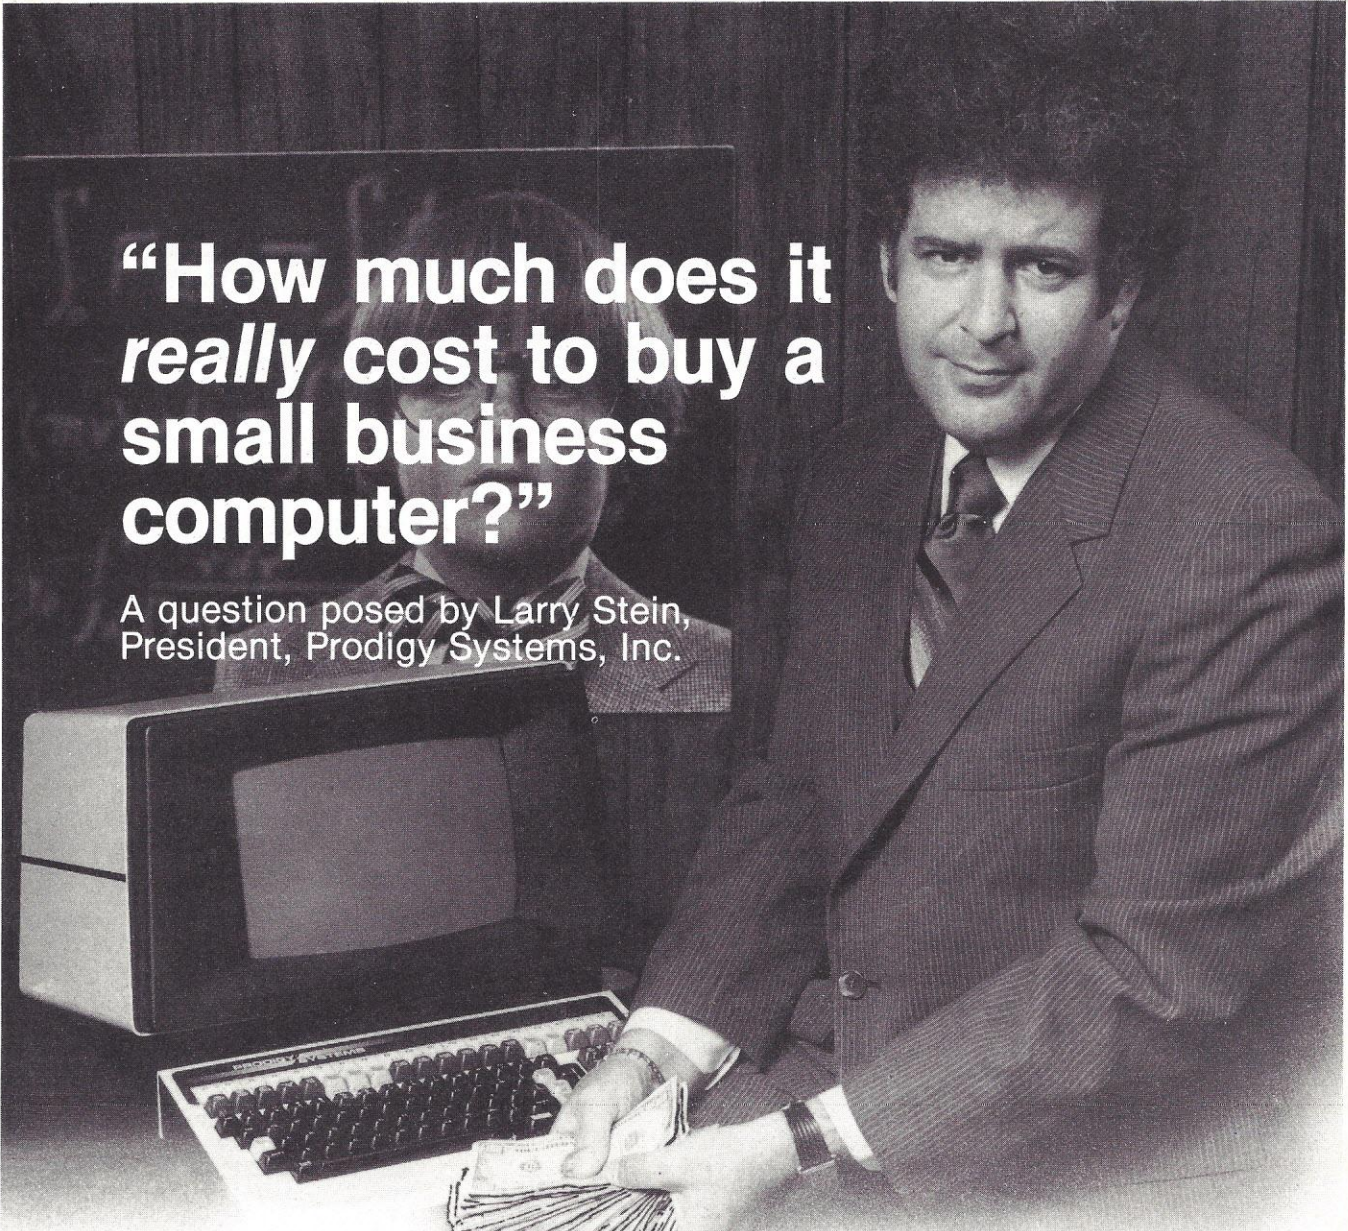

## Me, audited?

Often a radical change in deductions can flag a tax audit. A waitress deducting a \$5000 personal computer may present an opportunity for a second look by the IRS. To reduce the chance for an audit, enclose a brief description with your return of what the computer does for your occupation and how it helps increase or maintain your present skills and income. As an individual, your financial activities are unique. Considering this fact, a similar deduction claimed by two people may be accepted by the IRS in one case, and rejected in another. On the matter of deductibility of computers, it is best to consult your tax advisor for your own individual situation rather than take your computer cost as a loss.

One way to help your tax advisor is knowing some of the software programs that can aid you in qualifying for computer-related income-tax deductions. For example, anyone can qualify by using checkbook and income-tax programs, provided that they are used fairly often and help the user in his business. Also, mailing-list and mileage programs can help salesmen; typing tutorials, appointment scheduling and word-processing programs can help secretaries; and student grade scores and class-roster software can help teachers.

In addition to these aids, phone-directory programs, inventory, calculation software, data-base management programs, payroll, accounts receivable and accounts payable software can also be used to help in qualifying for computer-related tax relief. 

# “How much does it *really* cost to buy a small business computer?”

A question posed by Larry Stein, President, Prodigy Systems, Inc.

**E**very time I read an ad for one of the new low-cost business computers, I cringe. Why? Because I see “respectable” manufacturers marketing computers like automobiles. They play games by advertising low prices, but they don’t tell you about all the extras you have to add to make the system work. Especially the biggest extra of all — software. Without software a computer is worthless. Yet, most manufacturers like to keep the software issue hidden in the closet. Mostly because it adds considerable cost to their

“low-priced” computers. But you can’t talk about the cost of a computer without including the cost of software.

At Prodigy we think software is very important. That’s why the base price of our computers includes our software (perhaps the best business software for small computers available today). We also include installation and training (at your location) — virtually everything needed to plug in and start operating. There are no hidden extras.

When you’re talking about something as serious as bringing a computer into your business, you don’t have time for silly games. And we won’t play them. Your local Prodigy dealer will be happy to show you what it really costs to buy a small business computer; and how it ultimately will save you money.

Call (201) 283-2000 for the dealer nearest you.

**PRODIGY**   
SYSTEMS, INC.

# Our incredible low prices just got 2% lower. Have a merry computer and a happy software.

# Alpha Byte STORES

# (213)706-0333

31245 La Baya Drive, Westlake Village, California 91362

## We built a reputation on our prices and your satisfaction.

We guarantee everything we sell for 30 days. If anything is wrong, just return the item and we'll make it right. And, of course, we'll pay the shipping charges.

We accept Visa and Master Card on all orders. COD accepted up to \$300.00.

Please add \$2.00 for standard UPS shipping and handling on orders under 50 pounds, delivered in the continental U.S. Call us for shipping charges on items that weigh more than 50 pounds. Foreign, FPO and APO orders please add 15% for shipping. California residents add 6% sales tax.

The prices quoted are only valid for stock on hand and all prices are subject to change without notice.

## LEISURE COMPUTING

# Another computer advantage—cutting Christmas costs

**Curb those cash-and-credit holiday blues without sacrificing the spirit of the season**

ILLUSTRATION BY FRANK MARCILIANO

**T**he credit card must have been invented in December. Sales, however, probably weren't invented until January. Thus, each Christmas, many charge-card users and cash-carrying shoppers alike send their budgets into the red trying to purchase gifts for all those relatives and friends. (As a general rule,

savings are not inherent in the holiday season.) And, what's more, the parties themselves tend toward the extravagant, for what's a Christmas party without the elaborate trimmings? There must be a better way.

And a better way there is. Using a party-planning and gift-giving program, these staples of the season don't have to put a damper on the holiday mood.

This program, written for a TRS-80 Model I, alleviates the "every relative and friend gets a gift" problem by randomly drawing names so that each person receives only one gift from one person each year—a big economic advantage. The program also alleviates the problem of being assigned your own name, receiving two presents the same year, or receiving a gift from the same person for two consecutive years. (Who wants two pairs of imitation alligator earmuffs anyway?) These solutions are possible using BASIC's random reseed and random-number generator.

Using BASIC, it is also mathematically possible to plan for as many years into the future as one less the number of people in the gift exchange. However, the larger the

number of people in the exchange, the longer it takes to run the program. For a large group, it is not uncommon for the computer to take hours to make a selection. Thus, a machine-language program is needed which executes an instruction in microseconds, rather than in milliseconds like the BASIC program.

Mathematically, what is required is to create an  $N$  by  $N-1$  array by random choice of elements, in which each row contains all numbers from 1 to  $N$ , randomly distributed, with no repeated numbers. (This prevents someone from receiving two gifts.) The columns also contain all the numbers from 1 to  $N$ , randomly distributed, again with no repeated numbers. (This prevents someone from giving a gift to a person to whom he has given the previous year.) However, column 1 must not contain the number 1 (no one gives a gift to himself), and thus there are only  $N-1$  numbers in each column.

The BASIC portion of the program makes use of the array generated by the machine-language program to make decisions concerning party planning.

## All in the planning

The party-planning program has five sections. The first section, inspired by the original gift-giving problem, will decide on an exchange of presents among a large group of people; that is, it creates the holiday gift-exchange listing.

Presently, the maximum number of people that can be handled within the program is 25. This number is limited only by the DIM statements in line 30. The limit may be changed at any time and depends only on the amount of core memory within the computer system. For large groups of people, the CLEAR 1000 in the same line may also have to be increased.

In running this section of the program, you are prompted to enter the

names of the people in your exchange, the year that you wish the exchange to begin, and the number of years into the future for which you wish the computer to create a listing. The greater the number of years requested, the longer it will take to create the array. For a large exchange, such as 20 persons, choosing names for 19 years (the maximum allowed for 20 people), might take 10–15 minutes. The array is typically formed in seconds.

## Use imagination

When section one of the original program was written, it became apparent that the special array could be used for additional types of party planning, and thus, sections two through five were conceived.

Section two uses the array to generate the elements of a potluck dinner—a party in which guests are asked to bring items of food to someone's home. The array, which in this case contains only one row, is modified (and for sections three through five as well) in that it becomes possible for column number 1 to contain a 1, column number 2 to contain a 2, etc. This modification eliminates the constraint that person number 1 will

not be allowed to be assigned item number 1.

When running this section of the program, you will be prompted to enter the names of the guests and then the items of food that you want them to bring. You may have less items than guests, but not more. If two guests are asked to bring the same food (such as frog's legs), then it must be entered twice.

A progressive party is planned in section three. A progressive party is one in which all the guests assemble at someone's home for the first course of a meal and then move on to a new home for the second course.

When running this section, you will be prompted to enter the courses in order (such as soup, salad, fish, etc.) and then the names of the guests. You need at least as many guests as there are courses, but you may have more. The computer then decides who serves which course, relieving the planner of this obligation.

Section four plans the rotation of homes for a bridge or poker party. After the computer prompts for the names of guests, it selects the order of the meetings for as far into the future as is mathematically possible. It should be noted that when the array

is modified to remove the constraint that the number 1 cannot appear in column 1, etc., the number of possible rows increases from N-1 to N. Thus, for eight people the computer will set up 64 meetings ( $8^2$ ).

Finally, the computer decides the distribution of the party clean-up chores, which takes place in section five. Any number of people may be entered and any number of chores may be listed. Because there are usually more chores than people, some individuals are assigned more than one chore. To insure that the first person entered does not always perform the maximum number of chores, the names are jumbled as are the chores. The program then assigns the chores to these people.

### Program notes

An analysis of the BASIC program shows that statements 10-310 introduce the program and establish the menu. Line 30 contains the CLEAR and DIM statements for the arrays, which may be expanded for large arrays and longer strings. For these arrays, it is important to define all numerical variables as integers in order to run the machine-language program.

Lines 1000-1350 are used in the Christmas-gift exchange, and lines 2000-2360 are used by the potluck-dinner section. The progressive-party section is contained in lines 3000-3350, while the bridge or poker party use lines 4000-4220. Finally, lines 5000-5320 decide on the clean-up chores.

Lines 50010-50030 create the flashing "Press Enter" prompt. Note that the ENTER key may be pressed at any time during the flashing cycle, even while the machine-language program is being loaded. Then, lines 50040-50070 create the flashing "PLEASE MAKE SELECTION" prompt.

In line 50080, the constraint that

### VARIABLES IN THE BASIC PROGRAM

A\$(25)	- Lists of guest names, etc.
B(25,25)	- Array generated by machine-language program
B\$(25)	- Lists of items, etc.
CH	- Chore number
CO	- Course number
D\$	- Holds INKEY\$ selection
I	- Part of FOR-NEXT statement for subscripted variable
IT	- Item number
J	- Part of FOR-NEXT statement or totals count
K	- Part of page-scrolling routine
N	- Counts item, guests, etc., and equals the number of columns in array
S	- Selection number, numerical
S\$	- Selection number, string
ST	- Part of page-scrolling routine
T	- Part of FOR-NEXT statement used in timing video displays
TE	- Temporarily holds value of N
V	- Part of FOR-NEXT statement for subscripted variable
W	- Part of FOR-NEXT statement
Y	- Counts years, etc., and equals the number of rows in array
YE	- Year for first gift exchange
Z	- Dummy variable for user statement
Z(3)	- Holds variable for input to machine-language program

column 1 not contain the number 1, etc., is eliminated. The same line then calls the array-generating routine, and restores the routine to its original format which includes the constraint.

Lines 50090 and 50100 establish the initial conditions for the machine-language program to create the array. It is important to note that in these two lines, the order of presenting the variables and their definitions must not be changed for the machine-language program to run correctly. Finally, lines 60000-60270 load the machine-language

program while the computer is displaying its description.

### Impressive printout

The program was written for video display, but if the PRINT statement is changed to LPRINT in the following lines, the program is output on a line printer. Simply change lines 1260, 1290, 2290, 2310, 3270, 3280, 3300, 4140, 4150, 4180, 4200, 5240 and 5270. Thus, the '@NN' in lines 1260, 2290, 3270, 4140 and 5240 should be changed to 'TAB(NN)'. For example, line 1260 should read `LPRINT TAB(25), "CHRISTMAS"; YE:LPRINT.`

It is also convenient to delete lines 1300, 1310, 2320, 3310, 4190 and 5290. In addition, delete the GOSUB50000 in line 4200. The printer display will also look more impressive if line 1330 is changed to `YE=YE+1:LPRINT:LPRINT.`

To change the 16k (32511 bytes) Level II version to a faster 32k disk version, the following changes must be made:

- Memory size=48895
- Line 50080 should read: `POKE-16495,00:POKE-16494,00:GOSUB 50090:POKE-16495,40:POKE-16494,223:RETURN`
- Line 60000 should read: `FORI = -16640 to -16403:READJ`
- Line 60020 should read: `DEFUSR = $HBFOD`
- Line 60060-60270: All DATA statements '127' should be changed to '191.' Do not change the '127' in line 60050.

*Editor's note: The machine-language program is listed on page 141. There are a number of references available that will aid in understanding the operation of this program, one of which is James Farvour's work, Microsoft BASIC Decoded and Other Mysteries for the TRS-80.*

*continued on page 132*

## LEISURE COMPUTING

### Holiday shoppers' guide

When the kids clamor for video games this Christmas, why not get a personal computer instead? Several manufacturers offer personal computers with a variety of software to get the whole family involved in games, calculations or problem solving.

#### The Atari 400

Personal computers are no longer only in the province of adults. Programs for game playing, creating music and learning state capitals keep children busy for hours. When this unit does get back into adult hands, it can help with investments, conversational French and calculating biorhythms.

The price is \$399.

#### Intellivision by Mattel

To alleviate television tedium, Intellivision turns a color TV into a baseball field, a motor speedway or a war zone. Interested in furthering your children's education at home? This unit also has programs for education. Using the Keyboard Component, adults can get involved with personal finance, physical fitness or stock analysis programs.

The price is \$300.

### The TI 99/4A

This personal computer easily handles a variety of home applications. There are programs for entertainment, personal finance, record-keeping and beginning grammar. Interested in variety? This unit provides music capability in stereo by hooking it up to a hi-fi system. A TV can act as a video monitor using a plug-in modulator, or monitors may be purchased for the system.

The price of the computer is \$525 and the modulator is \$50. The 10-inch color monitor is \$375.

### The Commodore VIC 20

The VIC 20 color personal computer has qualities that will intrigue all ages. Games, education and home-utility programs can help solve problems and perform calculations. Are you an aspiring musician? This computer won't give you top billing at Carnegie Hall, but you can explore your talents by creating sounds and songs.

The price is under \$300.

### The Sinclair ZX81

This unit is probably the smallest available with general-purpose capability. By plugging the ZX81 into a television set, users can brush up on math, spelling, and business and household management. When you're not busy with these programs, relax and play games. (That is, if you can get this computer away from the kids.)

The price is \$149.95 completely assembled, or \$99.95 in kit form.

# KNOWLEDGE IS POWER

True when Sir Francis Bacon said it in 1597 at the dawn of the scientific age. And true a thousand times over in 1946, when the brilliant mathematician John Von Neumann supplied the key idea—the stored program—that made possible the modern computer.

Today the age of the micro-computer is upon us and individuals *personally* own machines vastly more powerful than Von Neumann's. Personal Computing, the hallmark of the 21st century. And for the readers of PERSONAL COMPUTING magazine, the 21st century has already begun.

Doctors, dentists, lawyers, retail merchants, parents, teachers, investors, inventors, salesmen, scientists, engineers, artists, designers, small businessmen, personal estate managers—PERSONAL COMPUTING subscribers all. Some started before they bought computers and then used our no-nonsense reviews and articles to decide whether and which for all their subsequent purchases. Others bought their computers first and then turned to us for the up-to-the-minute, accurate information they needed to get the most from their machines.

Profit, convenience, entertainment, education, our readers' interests run the gamut. But they share a common insight. They've discovered a tool that amplifies the power of their own minds. From us they expect—and get—articles to help them master and use that tool, articles like these:

- Are systems prices going to come tumbling down?
- The current balance sheet on small business software.

- Your data processing department manager's real opinion of your personal computer.
- Custom software is required—sometimes.
- Computer literacy—a right or a privilege?
- Inventory Control: One of the Toughest (But Most Useful) Jobs for a Personal Computer.
- Goodbye Passive T.V., Hello Active Learning.
- Self-writing programs can solve the software crisis.
- The ultimate fantasy—simulation games make it.
- Re-learning work habits to fit the executive work station.

## Increase Your Power

Personal computing is growing with dizzying speed—over one million users now, over ten million by 1985. Ten million people with enormous power at their fingertips, but they won't all be equal. The ones getting the most from the computer revolution will be the ones who've subscribed to PERSONAL COMPUTING the longest. Don't delay. Don't miss out. The future won't wait. Call or send for your no-risk trial subscription today!

## PERSONAL POWER

**YES,** enter my subscription to PERSONAL COMPUTING at the special introductory rate of \$9.97 for 12 issues—a discount of over 44% off the regular price. I understand I reserve the right to cancel my subscription any time, for any reason, and receive a refund for the full amount I've paid.

## EDUCATIONAL COMPUTING

# Progressive learning by computer

The "computer age" in education helps put students of all ages in control of their own learning

**T**o untold numbers of parents who had to struggle with memorizing multiplication tables, or who counted on fingers and toes to solve a math problem, the new "computer age" in elementary school education is a puzzling phenomenon. How is it that some four-year-old children not only seem to understand, but apparently embrace and put into practical

application the rudiments of geometry and algebra—years before such demands may actually be made of them in an ordinary school environment?

The answer is quite simple. No one ever told them that this was supposed to be difficult, or that it was advanced learning. They have discovered the basic principles involved, and have put them to use by using TI

LOGO, a computer language designed for the TI 99/4 personal computer.

TI LOGO is based on the philosophy of education developed over a 12-year period by Dr. Seymour Papert and the staff of the Artificial Intelligence Laboratory at the Massachusetts Institute of Technology. LOGO offers a discovery-oriented approach to learning that not only attracts and holds young peoples' attention, but stimulates interest and gets them involved in the learning process.

At the heart of LOGO is the concept of creating computer-based environments in which the learning of mathematics and other subject areas can take place in a natural way through the process of exploration, trial and error and discovery. There are no right or wrong answers in LOGO—merely problems that need to be corrected and programs that need to be debugged.

Many of LOGO's concepts are based on the work and educational theories of the late Jean Piaget, the Swiss authority on child development. After five years of study with Piaget in Geneva, Papert came away very much impressed by Piaget's way of looking at children as the active builders of their own intellectual structures.

"To say that intellectual structures

PHOTO BY KENNETH W. SCHROERS

TI LOGO creates computer-based environments in which students of all ages can take part in the concept of learning-without-teaching.

are built by the learner rather than taught by the teacher does not mean that they are building from nothing," says Papert. "Like other builders, children appropriate materials they find about them, especially the models and metaphors suggested by the surrounding culture.

"For me, the most dramatic image of successful learning is the way children learn to talk. This learning contrasts with school learning in many ways, of which I think two are most important. First, it is highly successful. All children learn to speak the colloquial dialect spoken by those around them. Second, it has none of the technical paraphernalia of schooling. There is no curriculum, no set lesson times, no quizzes, no grades and no professional teacher. It is part of living. I call it 'learning-without teaching,' or Piagetian learning."

## Teaching computers

This philosophy of learning-without-teaching has been applied in fundamental ways to the development of the LOGO computer language. As Paper says, "In most contemporary educational situations where children come into contact with computers, the computer is used to put the children through their paces, to provide feedback and to dispense information. The computer, in essence, programs the learning process.

"Our approach has been diametrically opposed to that. By striving to make the computer's processes as transparent as possible and creating activities in which children 'teach' (program) computers via a procedural language like LOGO, we have aimed toward putting children in control of their own learning. In teaching the computer how to think, children explore how they themselves think."

To develop this learning approach, there was a cooperative effort between MIT and Texas Instruments.

TI LOGO is a high-level language that allows young students to communicate with the computer using easy-to-understand, everyday language. They can draw geometric figures and designs on the screen, or experiment with lines and proportions. They can create animated "movies" with moving shapes. They can also create their own shapes, giving each the attributes of color, speed and direction.

These moving objects are made possible by using the color and graphics capability of the TI 99/4A personal computer. The TMS9918A Video Display Processor in the system allows up to 32 different "sprites" or shapes to be placed on the screen at one time.

## The invisible space

A sprite is an invisible 16 x 16 space that can not be seen until it is given attributes that will allow it to have visible features. The user must first tell the sprite what shape it is to carry, and then set the color, the heading and the speed. It is possible to define any combination of sprites with the statement, TELL SPRITE (1 3 5 7 9), or all 32 sprites with, TELL :ALL.

TI LOGO has five sprites including a plane, a truck, a rocket, a ball and a box. Numbered one to five, these shapes can be incorporated in a procedure or the user can make his own shapes by entering MAKE-SHAPE, followed by an appropriate number (MAKESHAPE 6, for example). The 16 x 16 grid appears and the user proceeds to draw his shape using the arrow keys to move the cursor around the screen as desired.

Speed can be set from plus/minus 127, and headings can be set from 0 to 360. It is then possible to generate complex animated color movies that involve rockets taking off from a launch pad, planes flying over a landscape or whatever suits the imagination of the user.

For the youngsters to make use of the sprite capability, they must first teach the computer what to do and how to do it. They must make logical judgments as the procedure (or program) evolves, debug the procedure as necessary, and redefine the objective should the design or procedure require it. Since the students are in complete control of what the computer does, learning takes place naturally as the students explore the computer, discovering new methods of accomplishing their goal as they proceed.

The language is also structured so that preschool children can use the computer. Children as young as three-years old have become exposed to number and spatial relationships, decision-making processes and logical problem-solving techniques. As simple as these exercises are, the language also enables students to explore a succession of increasingly complex capabilities.

## Rising self-esteem

The benefits of this approach to learning are many and varied. It can help the youngster learn to think in a logical fashion, since the computer must be given logical instructions. It can guide the student through a wide range of mathematical exercises, especially in the areas of geometry. Youngsters soon come to know the computer as a tool for communicating and for practical problem-solving.

Another less obvious benefit is the attitude children develop. The positive experiences the children create with the computer fosters a positive self-esteem. TI LOGO allows the student to progress in many directions at a self-paced rate, and it offers the opportunity for virtually unlimited creative expression.

TI LOGO was tested prior to its introduction at the Lamplighter School in Dallas, Texas, and in New

## EMPIRE: WORLD BUILDERS™

By David Mullich, author of THE PRISONER

WORLD BUILDERS, the colonial stage of the Empire history... the first Interactive Fantasy of the EMPIRE GAMING TRILOGY. Join the travelers, scouts, builders, plunderers, asteroid miners, and high-technology homesteaders... pioneers on the fringes of the galaxy... citizens of an Empire still in its infancy. You can be any of them... you can be all of them. Your goals are to survive, to conquer, to prosper.

Explore the Empire using WORLD BUILDER's extensive English vocabulary. Pilot your All Terrain Vehicle (ATV) through treacherous swamps or rugged mountains, or build a thriving community in the midst of a desert... but beware...

You will traverse weird and fantastic landscapes draped in spectacular colors, thanks to a new, sophisticated high-resolution graphics system developed by the makers of IFs. And more: a soft-cover "Chronicle" retraces the EMPIRE's history from its inception to the time of the WORLD BUILDERS.

The EMPIRE GAMING TRILOGY will be completed by INTERSTELLAR SHARKS™ and ARMAGEDDON.™

Applesoft, 48k, DOS 3.3.....\$32.95

# Get the Most from Your PC-8001 with RACET NECDOS\*

RACET NECDOS does more for your PC-8001 than any other DOS. It's faster, more efficient and easier to use. It's upward compatible with the disk operating system supplied by NEC. It's loaded with extra features to let you stretch the limits of your system. It's only \$175, and what's more, BASIC-based TRS-80\*\* software can be converted to RACET NECDOS via a set of convert programs.

**Greater speed without sacrificing RAM** - RACET NECDOS is over 2½ times faster for random file reading and writing, up to 2.3 times faster for sequential I/O ... and 15 times faster for loading screens. But RACET NECDOS takes up no more RAM space than the factory supplied DOS. Many disk I/O functions have been relocated in the disk drive computer. And machine language files can be saved and loaded from diskette, further minimizing RAM usage.

**User friendly and self-protective** - RACET NECDOS makes programming easier. BASIC and DOS commands may be intermixed. Help and Error messages are displayed in English. Syntax errors cause display of the offending line. "AGAIN" and "HELP" commands as well as a directory utility provide additional assistance. A unique "SUPERZAP" feature permits diskette modification and repair of blown diskettes. A "CONVERT UTILITY" simplifies conversion from factory DOS.

File password protection, full color and ROM support, diskette-size files and elimination of MOUNT and REMOVE commands are other advantages.

**Options and Expansion** - Want to do even more with your PC-8001? RACET gives you the capability. Options include a machine language sort package (\$50) and an ISAM (binary tree) file handling system, the KFS-80 (\$150). There is RACET NECDOS for hard disk (Winchester) users, and even a CP/M\*\*\* call-compatible version. For more advanced programming, the RACET NECDOS Enhancements and Utilities package gives the more sophisticated user an elaborate set of extensions and utilities. RACENet\*, a networking package, will be available in the first quarter of 1982.

**Continued Support** - Through the RACET NECDOS User's Group Newsletter we will answer your questions, share applications and operating tips, and provide information on enhancements as they become available.

No one gives you more than RACET COMPUTES. To get the most from your PC-8001, write or call today.

Typical screen format - actual photograph.

If "fear of the unknown" is standing between you and computerization, you should find out about The Boss.

The Boss system is immediately comprehensible to bookkeepers because it utilizes virtually the same format they're used to.

So even someone with no previous computer experience can easily learn and operate The Boss system.

Features seldom found in packaged software.

The Boss system is fully interactive, fully departmentalized and exceptionally fast. It can generate an astounding number of complex reports at the touch of a button.

General Ledger and Accounts Receivable and Payable transactions can be entered in any order in a single program.

Up-to-the-minute financial reports can be obtained without batch processing.

The Boss system computes financial ratio analysis.

It protects data from unauthorized personnel as well as computer malfunction.

And it has the largest programming and storage capacity of any micro system.

The Boss runs on most small business computers with CP/M® or similar operating systems. Its cost is only \$2,495.

Get full support from Lifeboat.

The Boss is brought to you exclusively and supported completely by Lifeboat Associates, world's largest computer software publisher. For more information about how you can profit from this extraordinary financial accounting system, send us the coupon below. Or call (212) 860-0300.

# Break The Software Barrier

Imagine sitting down at your computer system and developing that specialized application you've always dreamed about — with absolutely **no programming!**

Now you can with **PRISM™** — the first Data Base Management System that provides the Total Solution to your information management needs. With **PRISM™** you can have your application up and running in a matter of minutes — not months.

**PRISM™**  
 "The Total Solution" **MAG**

© MAG 1981

PRISM's flexibility and ease of use are combined with its full spectrum of features and capabilities to make it the ideal DBMS for a wide range of business applications. Mailing Lists, Patient Records, Real Estate Listings, and Client Billings are just a few of the possibilities. And **PRISM™** provides the quality, performance, and affordability you have come to expect from MAG software products.

To find out how **your** dreams can become realities, see your **PRISM™** dealer today.

Micro Applications Group, 7300 Caldas Avenue, Van Nuys, California 91406, (213) 881-8076.

PRISM requires CP/M and CBASIC. (CP/M is a registered trademark of Digital Research. CBASIC is a trademark of Complier Systems.)

## Local networks

continued from page 29

That information includes the family's name and address, the ages of each family member, which church the family attends, which schools the children attend and any special needs the family has or foresees having.

"The census we conducted prior to this one was done with the help of a large time-shared computer system," Donahue says. "This time around, though, we realized that the task was just too big to be handled efficiently through time-sharing."

Through McRam Computers in Framingham, Mass., the diocese was introduced to the M/NET system. Donahue liked what he saw.

### Falling by the wayside

"We looked at a lot of systems, but they all fell by the wayside during the selection process," he says. "What we needed was a system that would support several users, provide us with a lot of memory storage and allow us to quickly get the information we needed. M/NET met all those requirements and was very reasonably priced."

Donahue says that the 1981 census has proved to be much more effective than previous diocese studies. Once all the pertinent information was collected and stored on hard disk, individual parish reports were printed and distributed to the various parish priests. These reports were then used in economic and social decision making. In the past, all the collected data was stored away in file cabinets and was rarely referenced.

"Now that the census has been completed, we're not just going to let the M/NET system sit around for the next 15 years," Donahue says. "We're now in the process of working it into our accounting department. With all the financial-modeling, data-base management, accounting and word-processing software available on this system, we're going to

find endless uses for the network."

As more and more people become aware of the benefits inherent in systems like these, users of Nestar, Corvus and Micromation network systems are bound to increase substantially over the next few years.

It is just as likely that more networks will be developed. Tandy Corporation recently announced a new local network designed for users of its TRS-80 computers, and it appears that other potential networking giants are waiting in the wings.

## Baked Apple.

Last Thanksgiving, a designer from Lynn/Ohio Corporation took one of the company's Apple Personal Computers home for the holidays.

While he was out eating turkey, it got baked.

His cat, perhaps miffed at being left alone, knocked over a lamp which started

a fire which, among other unpleasantries, melted his TV set all over his computer. He thought his goose was cooked.

But when he took the Apple to Cincinnati Computer Store, *mirabile dictu*, it still worked.

A new case and keyboard made it as good as new.

Nearly 1,000 Apple dealers have complete service centers that can quickly fix just about anything that might go wrong, no matter how bizarre.

So if you're looking for a personal computer that solves problems instead of creating them, look to your authorized Apple dealer.

You'll find everything well-done.

The personal computer.

For the authorized dealer nearest you, call (800) 538-9696. In California, call (800) 662-9238. Or write: Apple Computer Inc., 10260 Bandley Dr., Cupertino, CA 95014.

## Tax preparation

continued from page 53

beginning any others.

Another unique function is itemizing. You can use this with full-editing commands to list any names or sums required on any of the forms, dollar amounts first. You can add, delete, modify or insert items in the middle of a list. This list can be 1000 items long, although that is highly unlikely. (It is a function of the programming, not a real need.) Special itemization is available for reporting depreciation, return and royalties, gains and losses and special income on the Form 1040 or any of the required forms and

schedules, such as C, D, E, F and 4797 or 4562.

All in all, this is a remarkably powerful program containing numerous forms and schedules for a remarkably low price. This should be the best choice for small tax-preparation offices or individual tax preparers.

E-Z Tax Computer Systems' **State Income Tax Program** is one of more than a dozen state and local tax-return programs that integrate with the CPAids Master Tax package. (CPAids does not manufacture state and local tax software, but others

like E-Z have software for California, Kansas, Maryland, New Jersey, New York, Ohio and Pennsylvania.)

If you use CPAids' Master Tax, using the E-Z program for all of the state and local forms for New York State, New York City and New Jersey is very easy because most of the numbers are automatically read from the appropriate Master Tax Form 1040. E-Z has prepared a very straight-forward, simple manual that is as good as the parent manual. It identifies all of the information that must be input by hand and all that can be done by computer. If you do not use Master Tax, you will have to input all of the raw figures by hand. Then, the only advantage to this program is automatic calculation.

This program also calls up state and local forms either automatically or by single keystroke at the proper place in form processing. Although it is short, the package is well prepared and easy to use.

Micromatic Programming's **Tax-Saver** has been revised for 1982 to be used with TRS-80 Model I computers. It is directed towards professionals instead of individuals. While the 1981 version presented all of the instructions practically line by line with each form and schedule, the new version allows a professional to avoid the instructions on the screen.

### Long & short

Micromatic is now debating between two types of printouts. You may be able to use friction-feed IRS forms with pin-fed blank paper with overlays, or you might be forced to simply print out the information and copy it onto the forms. Exactly which printout Micromatic was going to use had not been decided in mid-October.

The new version will also be sold

CIRCLE 31

# Maxell Floppy Disks. Class of '81.

## Not a single dropout among them.

These are the disks that achieve all you expect from them. They are certified free of dropouts. And each one meets or exceeds the most demanding specifications every computer authority can set. That includes ISO, IBM, ECMA, ANSI, JIS and Shugart.

The quality begins with the finest raw materials available, and we make sure the quality stays high. Every Maxell floppy disk must pass an exhaustive series of eight quality control inspections. Under test conditions, after 10,000,000 passes, there is no loss of quality.

Maxell Floppy Disks actually help protect your computer drive heads. The self-cleaning jacket liner

inside every Maxell disk removes dust before it can affect your system. The surface lubricant reduces any chance of disk-caused head-wear.

There are Maxell disks for every disk drive system in operation today. Maxell is leading the way with new disk technology for tomorrow's computers. Your Maxell Business or Maxell Personal Computer Products supplier can put our "honor-grad" to work for you, and for your computer, now and in the future.

Call or write for more information. You'll learn that the care we take manufacturing Maxell Floppy Disks makes them live up to your highest expectations.

**maxell.** 

Maxell Corporation of America, Business Products Division, 60 Oxford Drive, Moonachie, N.J. 07074. (201) 440-8020

CIRCLE 32

in a short or long form. This does not correspond to the short or long form 1040, but to the types and numbers of schedules and forms each package includes. The short package includes the long-form 1040, Schedules A, B and TC and the forms for income averaging and maximum tax. The long package adds Schedule C and D for capital gains or losses. All of the figures integrate with a tax-planning package called the Tax Forecaster which is an inexpensive \$30.

The 1981 version of this package was based on five separate disks, each of which was used for various forms and schedules. Designed for individuals, its manual and instruction screens give very detailed and precise discussions of each line and form. The manual is clear and professionally prepared, and explains

how to take advantage of the minutiae of important subjects such as community property, alimony, items counted or not counted as income, and relatives and dependents through the most common schedules, A through SE. It includes a very helpful, complete glossary and a questionnaire. This is a very valuable tool for individuals and could be an excellent training device for accountants in small offices.

Microtax also has three tax-preparation products called **Level 1, 2, and 3**. The systems run on any CP/M machine having 56k of memory.

Level 1, which can print 23 schedules and forms and handle multiple clients, sells for \$250. It also prints IRS-approved forms. Level 2 goes beyond the capabilities of Level 1 in that it does 30 schedules

and forms, handles multiple clients and prints on either IRS-approved forms or overlays. In addition, it has a depreciation system and can handle and interface to several state-tax systems, also available from Microtax. It has an integrated data base, and can operate in batch computer and print mode.

Level 3 comes in two versions. It can either have the features of Level 2 plus partnership forms and schedules, in which case it sells for \$1500. It can also be purchased with only the partnership forms, selling for \$750.

All of the packages are in a compiled BASIC, which makes them very fast compared to packages that are written in interpreted BASIC.

Marilyn Smith, Microtax president, says that the company also has a demonstration package available

# Auto-dial/Auto-answer FOR \$224.95!

*The Microconnection™ can dial the phone and answer it too, transcribe transmissions decode busses, run printers, receive/send radio transmissions, answer/originate, and direct-connect to the phone system. Lots of terminal and host software for cassette and disk too. That's why it's a modem —and much more.*

Regular MICROCONNECTION™ prices start at \$199.50.

**the microp peripheral corporation**

To order your MICROCONNECTION™, or for more information, write or phone: 2643 151st Pl. N.E., Redmond, WA 98052 (206) 881-7544

for \$50. Update packages are also available which account for yearly variations in the tax laws. These cost \$250.

A final feature of Microtax's system is a pro forma system. This allows tax practitioners to print out what clients did on last year's return, and compare that with their efforts in the current year.

Although these seven income-tax programs are useful, remember that a computerized tax package is no substitute for in-depth and accurate knowledge of the tax law. If you put tax garbage in, you get tax garbage out, along with a load of rapidly calculated trouble.

These programs are basically computational and sorting tools, not automated CPA robots. So don't buy one of these packages if you think it will do your accountant's job for you. It can only help him do his job faster.

## ADVENTURES!!!

For TRS-80 and COLOR-80. These Adventures are written in BASIC, are full featured, fast action, full plotted adventures that take 30-50 hours to play. (Adventures are interactive fantasies. It's like reading a book except that you are the main character as you give the computer commands like "Look in the Coffin" and "Light the torch.")

Adventures require 16K. They sell for \$14.95 each.

**ESCAPE FROM MARS** (by Rodger Olsen)

This ADVENTURE takes place on the RED PLANET. You'll have to explore a Martian city and deal with possibly hostile aliens to survive this one. A good first adventure.

**PYRAMID** (by Rodger Olsen)

This is our most challenging ADVENTURE. It is a treasure hunt in a pyramid full of problems. Exciting and tough!

**TREK ADVENTURE** (by Bob Retelle)

This one takes place aboard a familiar starship. The crew has left for good reasons - but they forgot to take you, and now you are in deep trouble.

**DEATH SHIP** (by Rodger Olsen)

Our first and original ADVENTURE, this one takes place aboard a cruise ship but it ain't the Love Boat.

**VAMPIRE CASTLE** (by Mike Bassman)

This is a contest between you and old Drac - and it's getting a little dark outside. \$14.95 each.

## QUEST

**QUEST - A NEW IDEA IN ADVENTURE GAMES!** Different from all the others. Quest is played on a computer generated map of Alesia. Your job is to gather men and supplies by combat, bargaining, exploration of ruins and temples and outright banditry. When your force is strong enough, you attack the Citadel of Moorlock in a life or death battle to the finish. Playable in 2 to 5 hours, this one is different every time.

16K COLOR-80 OR TRS-80 ONLY. \$14.95

Please specify system on all orders

This is only a partial listing of what we have to offer. Send for free catalog to:

## ARCADE AND THINKING GAMES

16K and extended or level II BASIC

**TIME TREK, REAL TIME REAL GRAPHICS TREK.** See the torpedoes fly and Klingons explode. No more scrolling displays, no more turn taking. - This one has real time and real displays. In BASIC - for 16K level II or extended color BASIC. \$14.95.

**STARFIGHTER** - This one man space war game pits you against spacecruisers, battlewagons, and one man fighters. You have the view from your cockpit window, a working instrument panel, and your wits. Another real time goody. \$9.95.

**BATTLEFLEET** - This grown-up version of Battleship is the toughest thinking game available on 80 computers. There is no luck involved as you seek out the 80's hidden fleet. This is a topographical toughie. \$9.95.

**SLASHBALL** - A two player game of strategy and skill, this is like nothing you have ever seen before. This takes fast fingers, quick wits and concentration. Playable from age 6 to 65, it is a good family game. \$9.95.

**MINOS - 8K** - Features amazing 3D graphics. You see a maze from the top, the screen blanks, and when it clears, you are in the maze at ground level finding your way through on foot. Realistic enough to cause claustrophobia. \$12.95. (COLOR-80 ONLY)

# WHY PLAN 80?

**PLAN80™** is a new system that takes the big business, big computer approach to computer modeling and adapts it to smaller computers, which are inherently more friendly and responsive.

If you are not already familiar with the world of financial modeling you will soon wonder how you managed without a system like PLAN80. If you are familiar with the art you will find it incredible that a microcomputer can do so much of what has previously been the domain of million dollar machines.

**PLAN80 WILL DO 99% OF THE JOBS DONE BY  
COMPUTER MODELING SYSTEMS COSTING \$50,000**

## INSTANT 80 COLUMN APPLE\*

The miracle of the 80's... everything you want in an 80-column card.

### STOP STARING AT 40 COLUMNS

WIZARD-80 lets you see exactly what you will get when typing 80-column format. It gives you a full 80-column by 24-line display with all these features.

- Fully compatible with Apple II® and Apple II Plus®\*
- Fully compatible with most word processors, micro-modems and prom programmers, plus all current Apple II expansion boards
- Lists BASIC programs, integer and Applesoft
- Fully compatible with Pascal
- Uses software to switch between 40 and 80 column formats
- Displays 7X9 matrix characters
- Provides upper/lower case characters with full descenders
- Fully edits...uses ESCape key for cursor movement
- Scrolling stop/start uses standard Control-S entry
- Retains text on screen while it is being printed
- Contains crystal clock for flicker-free character display
- Has low power consumption for cool reliable operation
- Leads soldered directly to board for maximum reliability
- 2K on-board RAM, 50 or 60 Hz operation
- Inverse video selection standard

## Introducing 4 new programs from

These new programs are going to do for you just what our VisiCalc™ program has done: make your computer work harder, so you can work smarter!

They'll enable a personal computer to take over more of those tasks eating up so much of your time. That'll give you more time to concentrate on the tasks where your skills, experience and intuition can do the most good. Things like thinking, planning and managing.

A personal computer can help you do all these things better. And Personal Software™ programs will help you do them best!

**VisiDex.** The VisiDex™ program makes it a snap for you to remember anything, and everything, you don't want to forget.

It's a free-form personal filing program with nearly unlimited cross referencing.

VisiDex "thinks" and "remembers" just the way you ask it to—so you can access it anyway you want, and find exactly what you want—instantly!

**VisiPlot.** The VisiPlot™ program makes it easy to see what your numbers really say.

It adds real meaning to financial analysis, forecasting, budgeting and business planning. Because VisiPlot takes hard-to-grasp numbers and automatically turns them into easy-to-comprehend charts and graphs, right before your eyes!

All kinds of charts and graphs, with all kinds of flexibility in titling, shading, and color—all at the touch of a few buttons!

# HOW TO WORK SMARTER NOT HARDER

## he people who brought you VisiCalc!

**VisiTrend/VisiPlot.** If you want sophisticated trend forecasting and statistical analysis—and you know how hard it is to create them by hand—you'll want to get your hands on the VisiTrend/VisiPlot™ program!

This program will enable you to rapidly perform regressions and time series analysis, plus providing you with comprehensive charting and graphing capabilities.

**VisiTerm.** The VisiTerm™ program enables you to reach out to the world.

With VisiTerm, you'll be able to use your personal computer to communicate with larger computers, to tap into data networks, to communicate with other personal computers.

VisiTerm gives you all the benefits of a personal computer, plus all the advantages of an intelligent terminal, all in one package.

All of these programs are currently available for the Apple II and II Plus. Besides their many individual benefits, these new programs deliver an even greater total benefit. That's because many of them interact with each other and with our new, enhanced version of VisiCalc.

Together, they give you an unprecedented family of personal computing capabilities; making the computer work harder, so you can work smarter!

## "The best piece of software . . . ever!"

The industry is buzzing with comments on MicroPlan. Users have supplied unqualified quotes "the best . . . ever."

ALTOS COMPUTERS agrees. The ALTOS budgeting manager uses MicroPlan for revenue forecasts, consolidations, and everyday analysis. DURANGO's Product Manager uses MicroPlan for product pricing and for developing marketing strategies. TOSHIBA's General Manager uses MicroPlan for developing marketing strategies. The DNYABYTE VP of Finance simply says, "it's dynamite!"

And, ADDS' system staff maintains budgets; TELE-VIDEO's Controller reports financial performance; and NORTH STAR's Marketing Manager analyzes sales—all in MicroPlan.

**MICROPLAN IS EASY TO USE.** You don't type; so MicroPlan is designed for no typing ease. You don't think in formulas; so MicroPlan is designed for pushbutton ease. You are not a programmer; so MicroPlan eliminates all the computerese that makes life difficult.

**MICROPLAN SOLVES PROBLEMS.** MicroPlan lets

you solve your problems electronically. You enter values into the electronic worksheet. MicroPlan handles all the sums, percentages and ratios. Even complex depreciation, loan analysis and present value computations are supplied—all with pushbutton ease. And when you change one number, MicroPlan automatically analyzes the impact of "what-if" questions.

**MICROPLAN HAS POWER.** MicroPlan has more features and solves more problems. Add-on modules allow you to do consolidations, automated variance analysis, statistical calculations—it even lets you build complex models. And, with MicroPlan solution books you can apply MicroPlan to your business, such as, real estate, tax planning, and sales forecasting.

Call on your dealers. Find out why people are saying "MicroPlan is the best . . . ever!"

MicroPlan is available exclusively through local dealers. For more information, contact: Chang Laboratories, 10228 North Stelling Road, Cupertino, CA 95014; (408) 725-8088.

CP/M is a Registered Trademark of Digital Research.

## In the future

*continued from page 23*

corp plans to set up 100 bank-from-home test sites using customers in New York to help evaluate its electronic-banking system. If successful, Citicorp may expand to include a variety of other videotex services, and perhaps go nationwide.

### Going into orbit

With banking from the home as a starting point, we may soon find ourselves in the midst of a gargantuan home-information industry, called "electronic cottage" technology by Alvin Toffler in his latest book, *The Third Wave*. Instead of travelling to shop, work or seek entertainment, these things will be brought directly into our homes using personal-computer systems.

Home satellite "earth stations" promise to revolutionize our family life, linking earth-orbiting satellites, cables and computers to bring a wealth of information and services into our homes.

In 1975, RCA launched the Satcom I satellite for the purpose of broadcasting television programming directly to satellite-receiving ground stations in the U.S. The expense of satellite-receiving equipment initially restricted these signals to the cable companies, who in turn sold access to this programming to its subscribers. The subscribers then paid for cable hook-up plus a monthly subscription fee. Even with this hook-up, subscribers could only receive a small portion of available programming—

that which the cable companies chose to send through their cables.

In 1979, the FCC ruled that anyone was free to own and operate a satellite-receiving station without licensing. The following year, companies began designing new equipment that drastically reduced the cost of satellite-receiving systems. Satellites such as Satcom, Westar and Comsat travel in a geosynchronous orbit, remaining in a constant position some 22,300 miles above the earth. To catch the signal transmitted via these satellites, home receivers require a dish-shaped antenna about 10 feet across. The price range for these antenna is from about \$3000 to \$6000, or they can be obtained in kit form for about \$2000. Within five years

## WE HAVE A PROBLEM WITH OUR SOFTWARE

The problem is that it is underpriced! Potential buyers don't believe the accounting software has much capability at \$450, so they buy software with less capability at \$1000.

### What do the ones who buy it say?

"I have become more and more convinced . . . it is one of the best bargains available . . ."

80 REVIEW, 80 MICROCOMPUTING, June 81.

"The single data diskette with common files is really convenient . . ."

Randy Bemis, Bemis Construction, San Diego.

"I recommend MICROED software for my computer customers."

Sandor Zoboki, President,  
ZOBEX Computer Systems.

# MICROED

3910 BANDINI STREET, SAN DIEGO, CALIFORNIA 92103 • (714) 299-1125

## FUTURE COMPUTING

that cost will drop to about \$400, and the size of the antenna will be reduced to a compact three feet in diameter. Satellite-signal reception will then become a reality for most American households.

Satellite communication also

promises to replace the broadcast media as we know it today. But how will this degree of technology affect our home and family life?

One obvious result will be a significant increase in the amount of time spent at home, due to the redefining

of our work life over the next two decades. Our families will evolve to a situation similar to home life in the agrarian age, where the family worked together from the home. The difference will be that whereas agrarian families worked their land in relative isolation, the electronic families of the future will work their "cottage enterprises" through networks that link them with the world. Work will become independent of the office environment, creating a work force that is contract-oriented rather than employment-oriented, similar to today's freelance author who works at home.

This brings about some very important social implications. The initial problem people will face will be dealing effectively with the tension in the family that will naturally arise from spending so much time together. With the family working together as a unit, children may once again become a producing part of the family's income, and as a result, our post-industrial society may see an increased birth rate. The very design of homes will change to accommodate these shifting family/home/work relationships.

Perhaps the most intriguing aspect of the new realm of computer-augmented telecommunications is that it is no longer science fiction. It is a very real phenomenon, evidenced by this year's electronic shows and conferences. The process of creating legislation to regulate these technologies has already begun. New copyright provisions for electronic media, a redefinition of the right to privacy and the deregulation of telecommunication industries all pose critical questions as to the quality of our future lifestyle.

Throughout the 80s, we need to develop an increased awareness of government regulations concerning electronic-related fields, in order to ensure the formation of sound ground rules for the new age ahead. 

### The powerful package:

#### Super-Text II™

Allows you to learn the basics of text editing quickly. Advanced features will meet your expanding word processing requirements far into the future. \$150.00

#### plus Form Letter™

Provides automatic repetitive printing of letters. Allows insertion anywhere in a letter, also direct entry, optional prompting, special commands. \$100.00

#### plus Address Book™

Stores names, addresses, and telephone numbers and prints mailing labels. Has user-definable category system. \$49.95

**Buy the  
TAX-MANAGER and turn  
your apple into a tax deduction.**

***Let the Tax Laws work for you -  
buy the TAX-MANAGER in December  
and deduct the Apple and the Program THIS YEAR!***

Use The Tax-Manager to help you prepare your taxes. Then include the cost of this program and part of the cost of your computer as a deduction.

You don't have to be an accountant to understand it. Simply enter your tax information into this easy-to-use program. Then sit back and relax while it

quickly computes the information and prints most of your federal income tax schedules. Get The Tax-Manager now and start the New Year with your taxes under control.

When tax laws change, don't be concerned. The Tax-Manager will never be outdated. With Micro Lab's Extended Warranty

Plan (\$30 a year) you can update to the current version at no additional cost. You will not have to reinvest more money in a new program. The Tax-Manager, which is the first of the Micro Lab Tax Saver group, will keep you current.

**THE TAX-MANAGER IS NOW AVAILABLE AT THE INTRODUCTORY PRICE OF \$150.**

Series II is compatible with Series I data files.

Model I system will handle up to 600 names.  
Model III system will handle up to 1200 names.  
Either system available for only..... \$159.00  
Also available for the Model II..... \$199.00  
Handling up to 2500 names per file

## MASS/MAIL SUBSCRIPTION SYSTEM AVAILABLE FOR MODEL II. THE ULTIMATE IN MAILING SYSTEMS

"I think the system will stand the test of time... it is probably the most sophisticated system around for the micros today"  
Mike Schmidt (EDITOR) 80-US Jan/Feb pg. 94

Galactic's Mass/Mail System was designed with the needs of the large mailing list in mind. This system has capabilities of handling up to 10,500 records, with access times of less than 15 seconds and usual access of about one second. All adds, deletes and edits are instant for the operator and

## MAILING SYSTEMS

are then completed later in a "batch mode". The System comes complete with extensive documentation and ongoing support. ....

Contact Galactic Software for detailed specifications for your exact needs. Available only for the TRS-80 Model II.

## BUSINESS SYSTEMS

### INVENTORY MASTER SYSTEM

A program to fill your needs, handling up to 2700 items. With today's market, keeping on hand only what your demand calls for is reason enough to let your TRS-80 accurately and effectively take care of your inventory. Always know what to stock and when to stock it. Have a multitude of reports at your finger tips. This system has many features which were modeled after a main frame system of large capacity. More information available upon request.

Model I version just..... \$159.00  
Model III version just..... \$259.00

### ALSO AVAILABLE ...

For the MODEL I or III

### STOCK MARKET MONITOR

Cassette version..... \$89.00  
Disk version..... \$99.00

## ULTRA-TREK GAME

Can you master this trip through the galaxies? As commander, will you be able to keep the Enterprise and its crew en route and on patrol? Can you destroy the hostile base? Order today.  
Model I or III version only..... \$19.95

Send me the following:

- ☐ LDOS Model I..... \$169.00
- ☐ LDOS Model III..... \$169.00
- ☐ EDAS 3.5 Model I..... \$79.00

# EDUCATIONAL COMPUTING

## Education

*continued from page 68*

York City public schools via a program of the New York Academy of Science. Students ranging from nursery school through ninth grade have used the language and have responded enthusiastically.

At Lamplighter School, it is recognized that children learn in a variety of ways and at different rates of development. Instruction is thus molded to the child, rather than forcing all children into one mold. Teachers are teamed within a grade level, enabling children to work at the pace they find comfortable yet challenging.

Because of this teaching philosophy, Lamplighter School was considered a good environment in which to study how children might relate to new concepts of learning with a computer. A collaboration was created

involving the MIT Division of Study and Research in Education, Austin College in Sherman, Texas, and Lamplighter School. Fifty TI 99/4 personal computers were distributed among this group so that education students, who would eventually become teaching interns at Lamplighter, could be trained with the units.

Pat Mattingly, Director of Lamplighter School, says, "We began with the third and fourth graders, believing that was the most appropriate age, but we were surprised to discover that even three-year olds responded to the computer right away. One of our teachers who works with the youngest group is also involved in our computer training program, so it was easy for her to write the procedures

for them to use.

"Three-year-old children are not the least bit intimidated by the computer," she says. "No one has told them that they have any reason to be afraid of it, so they just sit down and use it. They are totally in command, and the knowledge they pick up is remarkable. They know their directions. They are learning numbers and the alphabet. There is no telling what the computer will do to their reading skills, because they can already read the keyboard and type in instructions to make columns, shapes and sizes."

### Taking charge

At Lamplighter, pre-school through first-grade students use LOGO as an instructional aid, rather than for developing their own

THE MOST EXCITING THING  
IN LEISURE SINCE BRITAIN  
INTRODUCED YOU TO  
SOCCER!

Now a whole world of skilled entertainment is at your fingertips. LEISURE GENIUS of the UK is bringing a brand new range of software to America. Games like EXPLOSION, DEATH, and WORMS will test your strategic ability and your dexterity. Unlike most other computer games, you can play these with partners and opponents and you can play WORMS against your own micro. Invented by some of Britain's brightest experts, they are a challenge you can't pass up or put down. Don't let all work and no play make computing a dull business!

Each game is available on floppy disk for only \$24.95. Ask your dealer or write to:

LITTLE GENIUS, SUITE 504, ALBANY HOUSE,  
324 REGENT STREET, LONDON W1R 5AA. ENGLAND.

# Leisure Genius

## **“We provide business programs as individual as your business needs.”**

“Allow me to introduce myself. I'm a Vector computer, dedicated to the advancement of society. And I'd like to tell you how a computer can help you manage your business more efficiently. Especially if that computer is a Vector, like me. Because we're probably the most flexible and cost-effective computers you can find.

“Our programs are the key. Because they enable me to handle sales forecasting, budgeting, job costing and proposals, commissions, personalized mass mailings, charts and graphs. We Vectors can even talk to each other and to other bigger computers.

“Unique combinations of our individual programs can actually customize me to meet your specific requirements. Any combination of our software packages can be assembled right off the shelf, to help you realize your full potential as a salesman, merchant, stockbroker, clergyman, contractor, real estate or insurance agent or whatever your business.

“Choose from Memorite III for word processing and mail list management, Execuplan for financial planning and forecasting, Business Accounting, Data Management for filing and sorting information, Communications and a host of others. And, of course, all we Vectors come with the popular CP/M operating system.

“For more information and your local dealer, call us at (805) 499-5831 or (800) 235-3547. In California, call (800) 322-3577. Or write to us at 500 North Ventu Park Road, Thousand Oaks, CA 91320.

“We'll show you how we small information systems can mean big business for you.”

# THE INCREDIBLE PRINTING MACHINE

## Typewriter 221

**IMAGINE** a computer printer/electronic typewriter with a 100 character daisy wheel, controlled by 6 microprocessors (including 2 Z-80's) with an all-electronic keyboard...all in one machine!

**THAT'S INCREDIBLE!**  
**THAT'S THE TYPRINTER 221!**

### **AUTOMATICALLY, IT WILL:**

- Center copy.
- Line up decimal points.
- Print vertical lines (to separate columns).
- Layout columns.
- Center titles (over a column).
- Print flush right.
- Return carriage (at end of line).
- Paper feed to pre-set starting point.
- Indicate end of page.
- Set tabs from one to many.
- Clear tabs from one to all.
- Set temporary margins (wherever you like) as often as needed.
- Repeat all typing keys as needed.
- Underline copy.
- Print bold face and underline.
- Do reverse print (white on black), sort of "reverse Video".
- Allow alphabetic and decimal tabulation.
- Indent paragraphs.
- Store in non-volatile resident memory:
  - Often used line formats (margins & tab stops).
  - Often used phrases (up to 835 characters) in 10 "bins".
  - Up to 10 complete forms (tax, medical, insurance, etc.).
  - Up to 14,000 characters in an additional 26 "bins".
- Print perfectly spaced proportional letters.
- Return to typing position after correction with relocation key.
- Allow one character to overlap another (Ø).
- Right margin justification.
- Print two columns with both right and left margins justified and the center ragged.
- Lift off errors (from single character to entire line).

### **IT WILL EVEN:**

- Allow a carriage return without a linefeed or a linefeed without a carriage return.
- Allow you to pre-set an impression control for high-quality carbon copies.
- Allow both vertical and horizontal half-spacing.
- Allow cancellation of copy before printing.
- Allow express and normal backspacing.
- Print in four different sizes: 10 pitch pica, 12 pitch elite, 15 pitch micron.
- Allow insertion of a missing character in an already printed line.
- Accept paper up to 17" wide.

- Backspace 1/10, 1/12, 1/15 or even 1/60 of an inch.
- Buffer and print out one word at a time, or one line or as many as 10 pages\*.
- Print up to 198 columns.
- Do 1/2 line spacing for footnotes and scientific notation.
- Accepts carbon film or reusable nylon ribbons.

### **IT HAS:**

- A lighted key to inform you that it's set to temporary margin.
- A factory installed noise reduction shield.
- A 16K buffer/automatic spooler\*.
- A lighted key to indicate upper case only.
- A Centronics standard parallel interface and can be ordered with:

RS-232 Serial interface\* or  
IEEE (PET) interface\*.

A print speed of 20 cps and (because of logic seeking circuitry) a through-put of approx. 32 cps.

A built-in anti-glare shield.

### **IT EVEN HAS:**

- Carbon film ribbons in various colors.
- 20 character plasma readout that informs you as to:
  - Number of characters to end of line.
  - Number of lines left to end of page.
  - The existence of an error condition.
  - The contents of a memory "bin".
  - Number of characters left in buffer.
- An automatic "feature in use" indicator (centering, storage, etc.)
- With scrolling, both FORWARD and BACKWARDS.

### **INCREDIBLE?**

### **THE 221 OFFERS EVEN MORE!**

- It's totally compatible with all computers and software.
- It will print in English, French, Spanish, Italian and German. It will automatically switch between English and foreign keyboards\*. (Under computer control).
- Scientific, mathematic, financial and legal daisy wheels available\*.
- Tractor feed available\*.
- Can be used as a stand-alone terminal\*.
- Can be used to access both TWX and TELEX networks\*.
- TRY WHAT YOU'VE BEEN MISSING.
- TRY THE INCREDIBLE MACHINE.
- TRY THE TYPRINTER 221.

Dealer inquiries invited.

(Call for store nearest you).

Service available through the world-wide facilities of the Olivetti Corporation.

# EDUCATIONAL COMPUTING

procedures. For this environment, the teachers have developed a series of procedures which offer color recognition, block building, shape comparisons and motion coordination. When a child tires of a particular program, he asks the teacher to set up a new exercise.

Most children then move on to take charge of the process themselves. They begin typing the control characters necessary to interrupt a program no longer wanted, and they then type the names of the programs they do want. The child begins to take charge of his own learning process which represents an example of learning-without-teaching in action.

## Not just nine to five

By the second grade level, Lamp-lighter children feel quite comfortable with "programming" the

computer, or, as they refer to it, "teaching the computer" a new procedure.

Children have virtually free access to the computers since they are located in the classrooms and in adjoining shared spaces. Children use any available time to interact with the computer, including coming to school early and staying late. Since TI LOGO requires little instruction, they can progress in many directions and explore the world of personal computing at their leisure.

Preschool children who have not yet learned to read or write are also exploring this "computer world" and are discovering they can make things happen by typing words on the keyboard. These words are written on cue-cards lying by the keyboard. Perhaps for the first time, they learn that alphabetic language serves a

very real purpose. They can experience writing as a meaningful activity.

The influence that computers will ultimately have on the educational process is yet to be determined, but if current studies prove to be accurate, it is likely that the roles of students and teachers will undergo gradual but radical changes. Children will learn in new, self-determining ways, and teachers will act as guides rather than as oracles.

For students, their innate curiosity and sense of adventure will assume ever more important roles in accumulating knowledge. For teachers, the challenges are many. They must absorb the added dimension of the computer into traditional curricula and learn to adopt new techniques for stimulating a child's natural hunger for information which relates to the world as he knows it.

## OUTLOOK

continued from page 16

will be forthcoming from Cromemco, Dr. Kraeger feels there is almost no limitation to running a full scale, sophisticated simulation program on a Cromemco system.

Dr. Kraeger is extremely excited about the potential uses for personal computers in the field of hydrology. As he says, "Most hydrological-simulation programs are written in ANSI-standard FORTRAN. The Corps of Engineers, for example, has written all of their major simulation programs in that language. With the introduction of some of the new hardware Cromemco is developing, there is

Dr. Kraeger charts monthly rainfall and streamflow data for a period of 60 years.

no reason these programs cannot be run on a personal-computer system instead of on a large mainframe."

Dr. Kraeger also says that, "In addition to the economies that can be gained, we will have a great deal more control over our computing requirements, enabling us to use our time more effectively."

The company also uses their Cromemco systems for word processing and accounting. All final reports and proposals are prepared using Cromemco's word-processing software. The reports can then be listed off on the Cromemco 3355a letter-quality printer.

## Government forestalls electronic mail

The view that the U.S. Postal Service should stay out of electronic mail is the official line of the Reagan administration, the Department of Commerce

and the Department of Justice. The Postal Rate Commission (PRC) has been asked to take another look at the proposed Electronic Computer-Originated Mail service (ECOM) proposal. The rate commission will specifically examine the likelihood that the ECOM service, which the USPS hopes to have in operation in January, will be supported either by revenues from monopoly first-class mail service or from taxpayer-derived treasury subsidies.

This interpretation by the *Electronic Mail & Message Systems* newsletter points out that the jointly filed comments include the accusation that the USPS-operated electronic-mail service would be "wasteful." The newsletter also states that a government-operated service would serve to reduce the incentive for private firms to offer electronic-mail services.

The commerce department has spoken out several times in opposition to USPS electronic mail, states the newsletter, although never in the form of a presidential directive to the USPS to drop its electronic-mail plans. Now that the prospect of a postal strike is past, it seems that the Reagan administration may be gently stepping up the pressure on the USPS to drop ECOM.

The new filings may be viewed both as a direct form of pressure on the rate commission and as an indirect indication to the USPS Board of Governors that the Reagan administration would like to see ECOM dropped. Perhaps most significant of all, according to the newsletter, is the wording of the filing. It is phrased as a general indictment of USPS electronic-mail activities.

On the assumption that the joint filing by the Commerce/Justice departments represents the position of the Reagan administration on USPS electronic mail, and that the filing concerns not only ECOM but future electronic-mail services, this could be the first step towards official administration support for policies that may lead to the repeal of some aspects of the Private Express Statutes.

## A computerized card catalog

An elementary-school library in Broomfield, Colo., is the setting for a test project using a personal computer to end "catalog frustration" and promote resource use and computer literacy.

Staff frustrations at the Mountain View Elemen-

INTRODUCING PLINK II,<sup>TM</sup> a giant step towards microcomputing perfection: the eight million byte program.

Lifeboat's fast, versatile PLINK II two-pass linkage editor helps you create large, sophisticated programs without any programming changes.

PLINK II is unique. While other linkage editors require you to construct programs in memory, PLINK II constructs your program on disk. You gain complete use of your computer's memory, using the full address space, up to 64K resident segments even on smaller machines.

PLINK II also constructs applications larger than your computer's address space. By creating arbitrarily complex overlay structures, you can flexibly bring in chunks of code from disk during execution.

Ideal for use with all popular high level languages, PLINK II even simplifies construction of bootstrap routines, allows menu-driven links, and more.

Reach out towards the infinite through PLINK II... and see how far your programs can take you.

Lifeboat Worldwide offers you the world's largest library of software from its offices in the U.S.A., Japan, U.K., Switzerland, W. Germany, and France.

SOFTWARE  
WITH  
FULL  
SUPPORT

tary School included too many cards for each item, filing backlogs and the impossibility of keeping a current catalog. These frustrations stemmed from a lack of student skills such as alphabetizing, spelling and an inability to grasp the concept of "subject heading."

To curb these frustrations, large public libraries and a few school systems have computerized their catalogs using minicomputers or mainframe computers, which are financially beyond the reach of small libraries. The personal computers, while more reasonable in price, have lacked the storage and software capabilities to incorporate such a system. To alleviate these problems, a sealed hard-disk system must be used.

The system at Mountain View Elementary was developed using an Apple II and a Corvus 10-megabyte hard-disk system. The software was written according to specifications developed by Betty Costa, a library media specialist and consultant.

The custom software that Costa developed has

three main phases. The first phase allows student access to the catalog items by subject, author or title. The second phase, a data-entry program, provides a fill-in screen which allows a one-time entry to be retrieved through information fields. The third phase involves information retrieval which may be achieved from a variety of angles. This phase can also produce a printed list for inventory, ordering and class projects.

The system has been well accepted by students and seems to be achieving its purpose of increasing interest and enthusiasm as well as increasing card-catalog and library-resource skills.

## Easing productivity problems

There are 600 million pages of computer printouts, 234 million photocopies and 76 million letters generated daily by U.S. offices. Trying to handle such a flood of paper and information often over-

## A.E.I. OUT FRONT AGAIN!

V.I.P.'s call A.E.I. because A.E.I. tests before shipping, has expertise on all items offered, and is price competitive.

**AUTOMATED EQUIPMENT, INC.**

18430 Ward Street, Fountain Valley, California 92708 (714) 963-1414 (800) 854-7635

whelms and frustrates office employees, negatively affecting their productivity.

A recent report from A.B. Dick Company states that "Humanizing the workplace and concentrating on the human factor when adopting new systems and ordering new equipment is a key way to reduce the amount of frustration found in the office."

The report, *Frustration In The Workplace: Its Effect on Productivity*, says the reduction of this frustration is crucial to enhancing productivity. "Frustration lowers morale, causes absenteeism and turnover, and can result in work stoppages." The report also suggests that one way to reduce this frustration is for the manufacturers of copiers and word-processing machines to "address the frustration issue at the design, engineering, manufacturing, sales and service steps of business."

The study concludes that both office-equipment suppliers and office managers must consider the frustration issue or run the risk of perpetuating conditions that may stand in the way of productivity improvement."

## Reports detail consumer trends

Consumers of the 1980s will see a marked growth in the use of personal computers as individuals health monitors and as an alternative to reading the evening newspaper. This information is presented in two market-research reports recently published by International Resource Development Corporation.

"Consumer Medical Electronics" details the boom in home medical electronics and states that within four years more than one million U.S. consumers will be using personal-computer software packages for monitoring their health, exercise and diet.

Home medical-electronic devices now represent one of the "hottest" consumer markets. The current growth rate of this market is more than 40 percent per year, as evidenced by the consumer rush to pur-

## RA/COBOL™ MAKES IT ACROSS!

**... FROM ONE OPERATING SYSTEM TO ANOTHER! A VITAL WAY TO PROTECT YOUR SOFTWARE INVESTMENT FOR THE FUTURE!!**

The **RA/COBOL** language runs on more different Operating Systems and more different-sized computers than any other similar language. For starters, it runs on NCR and TI minicomputers and, in the micro field, on the CP/M<sup>®</sup>, MP/M<sup>®</sup>, TRSDOS<sup>®</sup>, OASIS<sup>®</sup>, MOASIS<sup>®</sup>, and UNIX<sup>®</sup> (ONYX version) Operating Systems...to mention only a few.

Until now, serious business software of the scope and flexibility seen in the minicomputer world has not been available on micros. **RA/COBOL** now allows transfer of such software with a minimum of fuss.

We have participated in such a mini-to-micro transfer of a major set of general business software...using **RA/COBOL** as the transfer mechanism, of course. Running on literally thousands of minicomputers, these refined, enhanced, and proven software packages cover A/R, A/P, G/L, P/R, Order Entry (with Invoicing and Inventory Control) as well as Sales Analysis. The packages define a new level of achievement for features and flexibility in micro applications software and offer top quality at a reasonable price.

For immediate information, call 714-848-1922 for your complete product descriptions.

**... PLUS ALL THE OLD, FAMILIAR FAVORITES** that we continue to offer, such as:

# Keep your company ahead of the game. On TARGET.™

Successful companies stay ahead of the game with accurate analysis of past performance and accurate projections of future possibilities. An army of accountants with a lot of time can do that kind of planning. So can a huge, expensive main-frame computer.

And now, so can you. All by yourself. With the TARGET Business Planning System for as little as \$195 and an affordable microcomputer. You play the big business game for real, at a small-business price.

## Target: reduced risk.

Business conditions change very fast these days. TARGET planning helps your company keep pace. Makes it easy to ask crucial "what if" questions—What if labor costs go up 15%? What if the prime rate increases 1.25%?—and get accurate answers at once. So you can plan for change in advance. Which helps reduce risk. Which helps keep your company's growth and profit on target.

## TARGET does what you want.

- Cash flow analysis/projections.
- Sales projections.
- Budget planning.
- Job costing.
- Acquisition/merger analysis.
- Tax calculations/projections.
- Loan analysis.

You can do all this and much more with TARGET. You set the kind of results you want, and the steps you want taken to deliver them. TARGET is so flexible and has so many capabilities that it is a little like an army of accountants ready for

your orders. And the orders can be complex. "Figure likely future outcomes on the basis of past results." Or, "If this number is greater than that number, calculate this percentage. Otherwise calculate yet another percentage."

## It does things your way.

With TARGET you can get printed reports, in the form you set up, for each of your procedures. You can also get printed reports of the steps you used in each procedure, so that others can use it. You save procedures and specific figures separately, so you can update or look at other possibilities fast, sometimes by changing just one number. You can feed reports directly into a word processing system. And if you want to change a report format, or add another year or branch or product into your calculations, that's easy too.

## All you need to know is your business.

You don't have to know a lot about computers or, for that matter, about business planning to use TARGET profitably. TARGET understands an easy English-like language. It uses conventional mathematical steps. It comes with a manual that's been called "the best...full of clear examples and excellent sample models" (*Personal Computing* magazine, June 1981). And TARGET comes from a company—Advanced Management Strategies, Inc.—that's totally committed to giving you any help you need.

## You can build on TARGET too.

The TARGET Business Planning System is fully integrated to let your planning capabilities grow. You can start with Planner™ or PlannerCalc™ (same as Planner, only with an alternative way of setting up and calculating) at \$195. MasterPlanner™ combines Planner and PlannerCalc features and allows you to handle larger plans, \$495.

Options that work with any of the above: Business Analyst™, which speeds the handling of more complex procedures, \$395; Peach PIE™, which lets you draw from and add to information in the Peachtree General Ledger package, \$179; and Interchange™, which lets you merge and split various procedures, \$139.

Plus TASK™, a stand-alone project-management aid that performs critical-path analysis to help you meet tight schedules and budgets, \$329.

## What machines?

You can use TARGET on most microcomputers, including those from IBM, Xerox, NEC, Apple, Zenith, Vector and Tandy.

## Let us tell you more.

Get ahead of the game on TARGET. Call or write us today for the location of your nearest dealer. AMSI, Suite 200, 1935 Cliff Valley Way, Atlanta, Georgia 30329 404/634-9535

# SOFTWARE for the apple II\* from QUALITY SOFTWARE

## METEOROIDS IN SPACE™

By Bruce Wallace

We have taken our popular space game, formerly called Asteroids in Space, made some important improvements, and given it a new name — METEOROIDS IN SPACE. Your space ship travels through a shower of deadly meteoroids. Use your laser gun to blast the meteoroids. Big meteoroids shatter into smaller meteoroids when hit, and the smaller ones are usually faster and just as deadly. From time to time you will encounter an alien space ship whose mission is to destroy you, so you'd better destroy it first. All the action is displayed in fast, smooth, high resolution graphics, accompanied by sound effects. You now can control your ship using one of two options — the Apple game paddles or the keyboard. In METEOROIDS IN SPACE, the spaceship's velocity gradually decreases unless more thrust is applied, adding an element of control. Also new to this version is a hyperspace feature — translate instantly to another spot in the galaxy. The game is over when five of your ships have been destroyed. An additional ship is added for every 10,000 points you score. Runs on any Apple II with at least 32K of RAM and one disk drive.

On Diskette — \$19.95

## BENEATH APPLE DOS

A Technical Manual

By Don Worth and Pieter Lechner

Become an expert on the intricacies of Apple's DOS (Disk Operating System). BENEATH APPLE DOS is the perfect companion to Apple's DOS 3.3 Manual. Containing eight chapters, three appendices, a glossary, an index, and over 160 pages, this manual will serve to completely fill in the many gaps left by Apple's DOS 3.3 Manual. Written for Apple users with DOS 3.3, 3.2 or earlier versions, any Apple disk user would welcome having this carefully written manual at his fingertips.

### LEARN...

- How DOS 3.3 differs from other DOS versions.
- How disks are protected.
- How to use the disk directly, without DOS.
- How every routine in DOS works.
- How to customize DOS to your needs.

BENEATH APPLE DOS includes large quantities of excellent diagrams and tables and many programming examples.

Book - \$19.95

## CROSS-REF by Jim Aalto

Applesoft programmers will be delighted to have this cross reference utility program in their "tool kit" of software aids. What can CROSS-REF do to speed and facilitate your Applesoft program development? Consider these functions:

VARIABLE CROSS REFERENCE	LINE CROSS REFERENCE
FIND VARIABLE	FIND LINE NUMBER
REPLACE VARIABLE	VARIABLE ONLY LISTING
	LINE ONLY LISTING

Features that make CROSS-REF easy to use include:

- Written in machine language, occupies less than 3K.
- Resides passively in memory while DOS or Applesoft is active.
- Can be loaded with your Applesoft program already resident.
- Very fast — a VARIABLE CROSS REFERENCE for a 16K Applesoft program can start printing in 5 seconds.
- Contains printer format controls and headers for documentation.
- Prints English language error messages.

Cassette - \$22.95 Diskette - \$24.95

# OUTLOOK

continued from page 101

chase blood-pressure monitoring devices, pulse-rate monitors, electronic thermometers and other such devices.

The report points to a major trend in the U.S. towards preventive medicine, in which consumers are seeking to avoid, rather than solve medical problems. The report states that "By the late 1980s consumers will be spending close to one-half billion dollars per year on electronic devices for health monitoring and disease prevention." Consumers are also expected to use videotex and home-information services, via cable TV or telephone, to access these services.

The emergence of medical-electronic devices for healthy people, the report states, marks a turn-around from the thrust of consumer medical electronics over the past 20 years. In the past consumers have been interested in restorative or prosthetic devices such as hearing aids and pace-makers. The new electronic-medical devices are a broader cultural trend away from complete reliance on physicians and established health-care methods. The emphasis is now on self-care and self-reliance.

The study also states that consumer medical-electronic devices are subject to strict regulation by the federal government. This regulation indicates that manufacturers or distributors must allow for a time-consuming and expensive approval process.

The strict regulation on these devices does not extend as far as software packages for personal computers. Therefore, the growth of health-tracking software is likely to be unimpeded by federal constraints.

The second IRD report, "The Outlook for Electronic Newspapers" states that during the 1980s the market for electronic-newspaper services will grow to more than \$500 million, divided fairly evenly between consumer- and business-oriented services. News services will be used by only a small percentage of the population, generally those who have viewdata equipment or personal computers.

These electronic newspapers are expected to have very little impact on "paper versions" of newspapers. The study indicates that more than 90 percent of newspaper readers will continue to buy their news in the established form. The study also suggests that the real potential for the electronic-news products lies in providing information in greater depth than the "regular" newspaper provides.

Because electronic-news products are relatively easy to derive from "electronic newsrooms," the newspaper companies are expected to dominate the

# SUPER DISCOUNTS ON ALL COMPUTER EQUIPMENT

## 16K MEMORY ..... ONLY \$25.95!

For TRS-80 Keyboard or Expansion interface. KEYBOARD requires jumpers: \$2.00 Extra. These are 200 ns tested RAM for the TRS-80, APPLE or EXIDY.

## DISK DRIVES for the TRS-80 OR PMC-80:

All of our drives come complete with power supply and chassis. They may be used with existing Radio Shack drives on the same cable! 40 track drives store 102K bytes single density, and 175K double density. 80 track drives have 175K single density and 345K double density! All drives guaranteed 90 days, one year on power supply.

40 track MPI drives ..... \$319.95  
40 track TEAC drives ..... \$315.95  
40 track TANDON drives ..... \$319.95  
80 track MPI drives ..... \$449.95  
80 track TEAC drives ..... \$429.95  
2 drive cable ..... \$ 25.95  
4 drive cable ..... \$ 39.95  
NEWDOS 80 OPERATING SYSTEM ..... \$139.95  
NEWDOS 80 PATCH Patches NEWDOS 80 to work with single or double density and the doubler. .... \$ 59.95

PERCOM'S DOUBLER for double density operation! ..... \$219.95

The DOUBLER works with the TRS or PMC expansion interfaces to allow you to use your drives in double density! You may still operate your drives as single density also! Comes with DBLDS operating system which allows you to transfer single density files to double and vice versa! GREAT BUY!

DISKETTES: VERBATIM DATALIFE! BOX OF TEN SOFT OR HARD SECTORED 5 1/4" ..... \$32.50

## OUTLOOK

future market for these products.

Strong growth is also predicted in the market for electronically delivered newsletters for business subscribers and news-research data bases. The report points out that the business market for electronic-news products is in a more advanced stage of development than the consumer market. The business market already accounts for more than \$40 million in annual revenues to suppliers, compared with less than \$1 million for consumer products.

For more information on these reports, contact: International Resource Development, 30 High St., Norwalk, CT 06851; (800) 243-5008 or in CT; (203) 866-6914.

## Atari opens software center

The first Atari Regional Software Acquisition Center has opened its doors for business in Sunnyvale, Calif.

"This center is probably the first of its kind," says Bruce W. Irvine, vice president of software for Atari's Computer Division. "It is designed to provide a place where qualified software developers can work with Atari equipment, have access to technical reference materials and be able to work with our staff who can answer their questions about our computers. It is an essential part of our thrust into the home market."

The 4000 square-foot center houses the administration and duplication facilities for the Atari Program Exchange (APX), which makes software written by users of Atari computers available through a quarterly catalog. More than 57 different programs are now offered through the catalog. In addition, the center houses a facility for the conversion of programs written for other computers to a format that will work on Atari computers.

"We are interested in acquiring software in the areas of entertainment, self-improvement, home management, education and system software," Irvine says. "We recognize that no one company can develop all of the software needed to service the consumer market, so we are working with third-party developers to fill out our line. We are also encouraging others to develop and market software products on their own or through our APX catalog."

"We are also planning other software acquisition centers in geographical areas where there are high concentrations of programmers and users, such as metropolitan areas with technical universities."

# Unwrap the Crypto Mystery for \$495.

Thanks to the Western Digital CryptoPrimer™

Development Kit, cryptography is no longer a deep, dark secret. In fact, the kit is specially

designed for personal computer owners and is based on the National Bureau of Standards' data encryption algorithm.

Included in the kit are: a CryptoPrimer™ manual, a cryptographic system built around our WD 2001/2 data encryption chip, a convenient RS 232 connector and a special

hardware manual. All for just \$495. Best of all, you'll end up with more than a clue on how to implement all the benefits of data encryption. So send your check or money order (including \$9.00 for shipping and 6% sales tax if you're a California resident) to: Western Digital, 2445 McCabe Way, Irvine, CA 92714. Please also specify your computer's make and model number.

We think keeping cryptography a mystery is a crime.

*Making the leading edge work for you.*

# Monroe bows two computers

Touting the slogan, "The story's in our name," Monroe Systems for Business, which used to call itself "The Calculator Company," recently made its move into the personal-computer market. The two computers the company unveiled are not called personal computers. Rather, they are either the occupational computer or the educational computer.

The occupational computers, so called because they are intended for use in business by managers who can thereby increase their personal productivity, come in two configurations, the OC 8810 and 8820. The 8810 sells for \$3875 and comes with one disk drive, while the 8820 with two disk drives costs \$4385.

In addition to the disk drives, both machines sport impressive standard features, as seems to be the rule with new computers.

Both machines have an extended BASIC language, an operating system called, appropriately, the Monroe Operating System and an indexed sequential-access method system (commonly called ISAM), a file-access method. Both machines give the user 48k of RAM, which the company says is more than enough to hold the operating system, languages and one or more programs with associated data. Total file storage capacity is 650 kbytes with the two drives.

The keyboard is a standard typewriter model with the addition of a 15-key numeric pad, cursor-control keys, editing keys and user-definable function keys giving a grand total of 93 keys. (IBM's personal computer has only an 83-key keyboard, so presumably this keyboard will provide greater functional ease to users.)

The Z-80A microprocessor that controls the computer has access to a total of 128 kbytes of memory, including ROM, and the processor,

Monroe's occupational computer and educational computer have an extended BASIC, 48k of RAM, total file-storage capacity of 650 kbytes with two drives.

memory and display screen are all housed in a single unit. The keyboard is detachable for easy operation.

In addition, the 8810/8820 offers three RS-232-C communications ports with programmable baud rates and protocols for communication with a number of mainframe machines. The company plans to offer various peripherals, like printers and modems, that will connect to the ports. There will also be a cluster controller available, the company says, that will enable the computers to interface host-to-host and host-to-mainframe, or share a common printer.

At the same time, the company debuted its educational computer, the EC 8800. This machine is similar to the occupational computer, but with graphic capability and enhanced I/O structure.

Standard configuration for the

computer includes the same memory and microprocessor as the occupational computer, but only one disk drive. (A controller for the second drive is also standard.) Video outputs are standard on the machine—RGB color and monochrome composite video. The computer can simultaneously display color text in eight colors and high-resolution graphics in four of eight possible colors.

The back panel of the educational computer has the three RS-232-C ports that appear in the occupational computer. This one also has joystick sockets for use in moving the cursor around the screen. Also included are an AC outlet and an audio-output jack. Sound comes from the computer in four programmable channels with a frequency range of 92 Hz to 20,000 Hz.

The machine can also be used in TTY-emulation mode, so that schools using the unit can link up with state and district-wide computer networks, or commercial nets like The Source and Compuserve.

The educational computer sells for \$3595.

## The MX-100. Not just better. Bigger.

# Epson.

Our MX-80 was a pretty tough act to follow. I mean, how do you top the best-selling printer in the world?

Frankly, it wasn't easy. But the results of all our sleepless nights will knock your socks off.

The MX-100 is a printer that must be seen to be believed. For starters, we built in unmatched correspondence quality printing, and an ultra-high resolution bit image graphics capability. Then we added the ability to print up to 233 columns of information on 15" wide paper to give you the most incredible spread sheets you're ever likely to see. Finally, we topped it all off with *both* a satin-smooth friction feed platen *and* fully adjustable, removable tractors. And the list of standard features goes on and on and on.

Needless to say, the specs on this machine — and especially at under \$1000 — are practically unbelievable. But there's something about the MX-100 that goes far

beyond just the specs; something about the way it all comes together, the attention to detail, the fit, the feel. Mere words fail us. But when you see an MX-100, you'll know what we mean.

All in all, the MX-100 is the most remarkable printer we've ever built. Which creates rather a large problem for those of us at Epson.

How are we going to top this?

*Your next printer.*

# HARDWARE UPDATE

## PERIPHERALS

### Disk Subsystem

The MS-800C is a disk subsystem compatible with Heath/Zenith 89, Apple II, TRS-80 Model II and S-100-based personal computers.

The subsystem includes case, power supply, fan, cables, and a choice of four different drive configurations including one single-sided drive, \$1050; two single-sided drives, \$1595; one double-sided drive, \$1395; and two double-sided drives, \$2095.

For more information: Matchless Systems, 18444 S. Broadway, Gardena, CA 90248; (213) 327-1010.

**CIRCLE 151**

### Dot-Matrix Printer

The VIC 1515 is a dot-matrix printer for the VIC 20 personal computer, capable of printing alphabetic, numeric and graphic symbols.

With a speed of 30 characters-per-second, the printer allows the user to create copy for forms, program listings, mailing labels, charts and graphs. Special enhancements also allow extra-wide and reversed (negative) character printing.

The price is \$395.

For more information: Commodore Business Machines,

Computer Systems Div., 681 Moore Rd., King of Prussia, PA 19406; (215) 337-7100.

**CIRCLE 152**

### Typewriter Adapter

The Tyrop converts IBM Selectrics and other comparable typewriters into computer-output printers.

Features include a printing speed of 600 characters-per-minute; a variety of interfaces such as the RS-232-C, Centronics and IEEE-488 option; and a built-in self-diagnostic function to monitor printing.

The adaptor is distributed exclusively in the U.S., and costs under \$1000.

For more information: Hollander Office Products, 41 Duesenberg Dr., Suite B, Thousand Oaks, CA 91362; (805) 496-2533.

**CIRCLE 153**

### Disk Storage

The 9800 Series 5-megabyte Winchester Disk-Storage Subsystems provide IEEE-488 bus-based systems with increased data-storage capacity.

The 9800 is a compact, stand-alone package consisting of a Seagate 5¼-inch Winchester disk drive, a single-board controller based on the 9000 Series micromodule, and a 115V/230V power supply.

Features include 22-bit error detection, 11-bit error correction, a 256-bit data buffer, single-command disk initialization, and switch-selectable bus address.

The price is less than \$4000.

For more information: Micro-computer Systems, 432 Lakeside Dr.,

## The gifts of time. On CompuServe.

### I FOR NEW USERS.

CompuServe is in the holiday mode. If you subscribe to our system for the first time in November or December, we'll give you two free hours of CompuServe access time instead of one. That's a \$10 savings just to get started. So get thee to a Radio Shack Store®, get a demonstration, then buy the Videotex software package for most popular computers (\$29.95) or buy the system without software for "dumb" terminals (\$19.95).

And . . . once you're a subscriber, you can clip the adjacent coupon and take advantage of our second "gift of time". Good deal? You bet!

#### BASIC MENU

- Electronic mail • Financial data & historical information • Special interest data • User newsletters • CB simulation • Newspapers • AP wire • Games • Plus, when you need it, languages, file creation & storage (128K free!), software downloading, other services. Over 130 separate entries on the current menu.

## CompuServe

Information Service Division  
5000 Arlington Centre Boulevard  
Columbus, Ohio 43220  
(614) 457-8600 (800) 848-8990

### II FOR CURRENT SUBSCRIBERS.

You can give a friend and subscriber six hours or more connect time on CompuServe at a savings of 20 to 30% off the regular \$5.00 per hour rate. See the adjacent coupon for actual gift certificate values. If you are your only friend with a computer or terminal, give yourself the gift. There will be lots of access time over the holidays, and these special low prices will let you or your friend connect with the fascinating world of the CompuServe Information Service at a substantial savings.

### BOARDS

#### Memory Card

The AXP-32k Apple memory card provides the Apple II user with an additional 32k of RAM memory organized in two pages of 16k. This card increases the total RAM of the Apple II to 80k.

Included with the card is a disk containing the CTA Memory-Executive program which is an enhanced version of software employed by various 16k memory-expansion cards. The disk includes Applesoft and Integer BASIC, and operates by moving the second language to one page of the card and the DOS to the

second page, giving the user 47k of free memory.

Software compatible with the AXP-32k include Integer BASIC, Applesoft, Pascal, Microsoft Z80 Softcard, VisiCalc, FORTRAN and LISA Version 2.0.

The price is \$274.95.

For more information: Computer Technology Associates, 118 Castellano, El Paso, TX 79912; (915) 581-3500.

**CIRCLE 155**

#### PROM Blaster

A PROM burner for the Apple II and TRS-80 Model I and III programs nine different EPROMs (24-pin variety) on the same board.

The system will program model 2704, 2708, 2716, 2732, 2508, 2516 and 2532 EPROMs. The package includes an interface card, a set of per-

sonality modules, software on disk and an instruction manual.

The price is \$149.

For more information: Apparat, 4401 S. Tamarac Pkwy., Denver, CO 80237; (303) 741-1778.

**CIRCLE 156**

#### Color Buffer

The Color Buffer, a peripheral for the TRS-80 Color Computer, gains access to the system bus through the game slot cartridge.

The buffer terminates in the standard 22/44 card-edge connector, providing the user with access to

**CCA Data Management System...**  
It's simple, uncomplicated, economical

**of input from**  
**programmers**  
**around the nation...**  
**"it could become the best**  
**data management system**  
**ever written."** Dave C. Culbertson

Why? Here's a system written for digestion by most computers — executed by CPM. It means an entirely new world of simplicity and savings have been unfolded for you. With the CCA Data Management System, you are no longer locked in to a specific number of functions or applications. Without benefit of programming expertise, you can develop the application that's most suitable to your business or individual needs. Clearly defined documentation assists you to do so. There's no need to author separate programs for each task to be performed on your computer.

Your system will gain the latitude and versatility necessary to meet your ever changing needs. You add dimension to your computer by expanding file and record storage capacity — and the system's uniqueness is in its subservience to you! YOU are in control. We can, as the source of this now famous software system, provide you with the CCA COMPILED version at \$185.00 or the CCA COMPILED & SOURCE version at \$250.00. Other versions are available for your Non-CPM computer system. Write or call us for more details.

# ATTENTION COMPARISON SHOPPERS

## HOW DOES A \$299 BYTEWRITER-1 STACK UP AGAINST A \$650 EPSON MX-80? YOU DECIDE!

### The Only 80 Column Dot Matrix Printer Under \$300.

Why do we dare to compare the Bytewriter-1 to the Epson MX-80, the industry leader? Because we feel strongly that dollar for dollar, the Bytewriter-1 is tough to beat for performance and quality.

Our extensive testing has proved that the Bytewriter-1 interfaces problem-free to the TRS-80, the Apple II and the Atari 400 and 800.

We are not going to tell you that the Bytewriter-1 is better than the MX-80, but by comparison, and for half the cost, you get more than a reliable printer — you get a great value.

Call or write for more information today.

Impressed?

Thanks to customers like these, DB MASTER is the second fastest selling business software package for the Apple II.

Even more impressive are the comments from some of our customers. As Mr. M. Robert McElwain, Senior VP of the Bank of Louisville states, "After having purchased more than 400 software packages, I'm still trying to establish a list of top ten that I wholeheartedly endorse. I don't have ten, but I'M ONE CLOSER—DB MASTER has been added to the list. It's a real treat to acquire those which are truly outstanding. DB MASTER is quality software which I highly recommend."

Equally impressive is the range of features built into DB MASTER. As Mr. McElwain continues, "I could comment on the screen formatting, short forms, security, auto date . . . but where do I stop? With over 100 Apples, we think we recognize good software when we use it."

Our special thanks to Mr. McElwain. And to all our equally impressed customers.

As they all know, in today's highly competitive marketplace, a good name is hard to come by.

DB MASTER is a registered trademark of Barney Stone and Alpine Software Inc. Apple II is a registered trademark of Apple Computer.

## HARDWARE UPDATE

fully buffered address, data and control lines. The buffer also serves as a building block, allowing the user to plug in other peripherals such as a RAM Cartridge, serial and parallel I/O boards and an EPROM programmer.

The price is \$59.95 in the U.S. and \$69.95 in Canada.

For more information: TBH Canada, 67-3691 Albion Rd., Ottawa, Ontario, Canada K1T 1P2.

**CIRCLE 157**

### Connector Kit

The GOLD PLUG 80 kit eliminates the sudden death or disk errors that occur due to oxidation of the tin/lead surface of the TRS-80 Model I expansion ports.

The kit is a 10 micron over nickel card-edge plug that is soldered to the existing tin/lead plated card-edge

plug. It allows use of the existing female connectors on all cables, and existing expansion devices can be used without change.

Kits are available for keyboard/CPU to expansion interface for \$18.95 (both ends of the cable); and for expansion interface to disk, printer, screen printer or RS-232-C ports for \$9.95 each. Texas residents add sales tax.

For more information: E.A.P., P.O. Box 14, Keller, TX 76248; (817) 498-4242.

**CIRCLE 158**

### Memory System

The RAMDISK Memory System for the Atari 800 has 128k and includes software allowing it to function like a disk device. The system can also be programmed as bank-selectable RAM memory.

The module is installed in the sec-

ond RAM slot of the Atari 800, with 16k RAM modules in the first and third RAM slots providing 160k of RAM. The system is organized into eight 16k pages which can be selected under program control.

The system includes the 128k RAMDISK module, operating manual, DOS memory-management software and utility software.

The price is \$699.

For more information: Axlon, 170 N. Wolfe Rd., Sunnyvale, CA 94086; (408) 730-0216.

# OKIDATA

NEW

## Microline 84.

Introducing the Microline 84. The newest addition to the remarkable Microline family of printers from Okidata.

The Microline 84 prints bidirectionally at 200 cps and has 72 x 72 dot-addressable and block graphics. A full 96-character ASCII II set and condensed printing. Tractor and friction feeds. Parallel Centronics-compatible or RS232 interfaces. With all that as standard, you get a full year's warranty on the print head and 4000 to 5000 hours MTBF. And print quality that's crisp and clear in both text and graphics applications.

The Microline 84 gives you the throughput and reliability you need. Once again, quality printing from the company that stands apart from the rest. Okidata.

Interested? Contact us at Ill Gaither Drive, Mount Laurel, N.J. 08054, 609-235-2600 for more information on the remarkable Microline 84. Also available through authorized Okidata distributors.

Making small printers for people who think big.

## SOFTWARE UPDATE

# File it with VisiFile

VisiFile makes use of a personal computer as a file-management tool by handling record filing, searching, sorting, and printing reports and mailing labels. The program allows applications such as inventory; client lists and records; sales information; medical records and other word or numerical data to be stored, sorted and printed in a variety of formats.

The VisiFile FlexFormat feature lets the user change, rearrange and add unforeseen information to records, or combine business records into new files. This feature allows record keeping to adapt as quickly as information changes. For example, the change from a five-digit to a nine-digit zip code could be handled without rekeying all of the data. Users

may also create a "partial file definition" for extremely fast data entry of specific portions of records.

VisiFile is controlled by a "moving cursor menu" with prompting. Information entry allows the user to custom design a "form-like" format on the screen for input, and machine-language sorting routines and multiple keyed-field indexes assure information retrieval within three seconds.

Mailing labels (up to five across) and reports may be printed with VisiFile. When the user is ready to print a report, he may use a simple "row-and-column" format, or develop a custom-format area six rows deep by the width of the paper. Elements of each record may be arranged in that area to suit the user.

Records may be selected for printing in addition to being sorted or indexed.

All reports can be set up and saved with the program. Arithmetic calculations, including column totals, can also be handled in reports.

VisiFile records may also be transferred over phone lines by the VisiTerm program.

VisiFile runs on the Apple II with a language card or Applesoft-BASIC card, and on Apple II Plus personal computers with 48k minimum memory and one disk drive; however, two disk drives and a printer are recommended. The suggested retail price of the program is \$250.

# SOFTWARE UPDATE

## BUSINESS

### Word Processing

Wordstar, a word-processing system for business applications, is available for the Apple II.

WordStar features formatting on CRT screens, horizontal scrolling, column move, copy and delete, and an optional spelling checker called SpellStar.

Also available for the Apple are MailMerge, a data- and text-merging tool that enables WordStar to produce personalized form letters, and to merge and chain files; SuperSort I, which provides data-sorting, merging and selecting functions; and SpellStar, an automatic proofreader that exposes misspellings and typographical errors using a 20,000-word main dictionary that can be expanded and updated.

The prices for these programs are: Wordstar, \$375; MailMerge, \$124; SuperSort, \$200; and SpellStar, \$187.50.

For more information: MicroPro International, 1299 Fourth St., San Rafael, CA 94901; (415) 457-8990.

**CIRCLE 161**

### Business Graphics

The Mannesmann TallyT-3000

matrix line printer with multi-font option offers increased character-generation flexibility such as business graphics, subscripts, superscripts, labels and forms. The multi-font option includes host-defined fonts, high-resolution characters and double-high characters.

In addition to the standard 96-resident characters, up to 288 user-defined characters can be stored without sacrificing the printer's speed of 300 lpm.

Prices start at \$5495.

For more information: Mannesmann Tally, 8301 S. 180th, Kent, WA 98031; (206) 251-5524.

## OVER 70 TRS-80 PROGRAMS ON TAPE EACH YEAR... ... FOR UNDER \$0.75 (THAT'S SIX BITS) APIECE!

### For the MODEL I & II

Ol' Ebenezer Cload wiped his glasses off — and grabbed for his gold pouch! With **CLOAD** Magazine, he could use and enjoy his computer for the price of a turkey with stuffing! And he could send Bob home early, since the programs did not have to be typed in!

He now gets a 30 minute tape each month with 7 or more practical, tutorial, utility, and game programs to **CLOAD** and run. While he **CLOADs** the programs, he reads the editor's babblings that come with each tape.

Don't let ghostly images cloud your TRS-80's screen. Get a subscription to **CLOAD** Magazine!

#### The Bottom Line:

1 year (12 issues)	\$42.00
6 months (6 issues)	\$23.00
Single copies	\$4.50
Anthology #1	\$10.00
Anthology #2	\$15.00

MasterCard/Visa/Gold also welcome

#### The Fine Print:

Issues are sent First Class Mail.  
All issues from Oct. 78 on available — ask for list (24 Level I issues also).  
Programs are for 16K Level II, 16K Model III, and occasionally for disks.

Calif. residents add 6% to single copies and anthologies. Overseas — add \$10 to subscriptions, \$5 to anthologies, and \$1 to single copies. Sent AO rate.

TRS-80 is a trademark of Tandy Corporation.

### For the COLOR COMPUTER:

You just spent your vacation money on the Extended BASIC Color Computer, and now you want to buy software!!!!???

Don't skip meals — get **CHROMASETTE** Magazine! Each month your computer will get a balanced diet of 6 or more programs on cassette (just load and run!). Also, along with the tape comes some notes on the programs and tidbits on the Color Computer world.

**CHROMASETTE** Magazine — for those who relish every byte (that pun even hurt me).

#### The Bottom Line:

1 year (12 issues)	\$45.00
6 months (6 issues)	\$25.00
Single copies	\$5.00

Calif. residents add 6% to single copies.  
Overseas — add \$10 to subscriptions, and \$1 to single copies. Sent AO rate.

#### The Fine Print:

Issues are sent First Class Mail.  
All issues from July 81 on available — ask for list. Programs are for the Extended BASIC model only.

MasterCard/Visa welcome!

commands and relational data-base structuring.

The software can be used to create custom programs for accounting functions, inventory control, record keeping, time and personnel reporting, and mailing-list management.

The system is compatible with Z80 based personal computers, requires at least 48k of RAM, at least one floppy or hard disk drive, and runs on the CP/M operating system.

The price is \$995.

For more information: Condor Computer, P.O. Box 8318, Ann Arbor, MI 48107; (313) 769-3988.

**CIRCLE 163**

## Finance Programs

Finance Programs #1 is a home/business software package for the TRS-80 Color Computer that is divided into two categories, loans and investments.

The loans program performs principal, regular payment, last payment, remaining balance, term, annual interest rate and declining interest on loans.

The investments program calculates future value of regular deposits, initial investment, minimum investment, earned interest tables, and regular withdrawals from an investment.

The price is \$21.95

For more information: Computerware, Box 668, 1472 Encinitas Blvd., Encinitas, CA 92024; (714) 436-3512.

**CIRCLE 164**

## Data-Base System

Pegasus is a data-base management system written in Pascal for the Apple II.

With this software, the user can define a data base, insert from a text file or interactively, delete, modify records, print reports and select subsets from the data base to be printed or written to a text file for input to another program.

The system is menu driven and all

sorts are done upon insertion after all data has been entered. Also, an update service is available with the system.

The price is \$199.95 including reference and cookbook manuals and the update service.

For more information: Shakti Systems, P.O. Box 94543, Schaumburg, IL 60194; (312) 885-0831.

**CIRCLE 165**

## Formatting Aids

Visi-Caids is a companion package of programs for use with VisiCalc text files.

Features of the package include the label splitter, which creates a new text file to divide wide label entries in a selected column into two or more narrower columns; a print-file option and width adjuster to print or display VisiCalc models with variable-width columns; a program that reads VisiCalc print files; and a program that prints or displays formulas, labels, etc. and their coordinates arranged by column in ascending order.

The package is available in DOS 3.2 or 3.3 Applesoft and costs \$34.95.

For more information: Data Security Concepts, P.O. Box 31044, DesPeres, MO 63103; (314) 965-5044.

**CIRCLE 166**

## EDUCATIONAL

### Topic Tutorials

The first two releases in the Lesson-Tutorgraph series of single topic tutorials are Weather Fronts and Shore Features.

Weather Fronts provides an introduction to the concepts of weather fronts, such as their structure and nature. Concepts presented include front characteristics, frontal movement, and weather characteristics of different types of fronts. Six color cross-sectional diagrams illustrate

## MILESTONE™ the microcomputer project planner that finds the critical path

Outer space or real world — MILESTONE has the answers. With MILESTONE, tough planning jobs are made easy.

MILESTONE is a powerful new tool for managers and planners which organizes complex projects and identifies job schedules essential to on-time completion.

MILESTONE finds the critical path through hundreds of interrelated tasks and determines where slack time can be eliminated.

MILESTONE computes manpower requirements and costs, allocating them to proper schedule periods, and up to nine manpower skill/cost levels can be allocated to each task.

MILESTONE projects can be measured in hours, days, weeks, months, or quarters; with provision to specify working hours, holidays, vacations and other non-productive time periods.

You can reschedule or complete tasks, revise prerequisites, play "what if" games. MILESTONE immediately displays the results on your screen or printer — either as a table or graph! It's easy to use and requires no programming!

System with manual - \$295.  
Manual alone - \$25.

Versions for: APPLE, TRS-80 II, and most CP/M™ microcomputers.

# Your prayers have been answered.

If you own or use a micro-computer, then chances are that from time to time, you've wished that someone could simplify programming.

Because as useful as micro-computers are, they can only ever be as good as the programs they run.

Well then, how does this sound?

No more program-coding. No more debugging. And no more time wasting.

Arguably more comprehensive and advanced than anything else of its kind, The Last One is a computer program that writes computer programs. Programs that work first time, every time.

By asking you questions in plain English about what you want your program to do, The Last One uses your answers to generate a ready-to-use program in BASIC.

What's more, with The Last One, you can change or modify your program as often as you wish. Without effort, fuss or any additional cost. So as your requirements change, your programs can too.

And if, because of the difficulties and costs of buying, writing and customising software, you've put off purchasing a computer system up to now, you need delay no longer.

Available now.

The Last One costs \$600 plus local taxes where applicable and is now available from better computer stores.

For further information, write to D.J. 'AI' Systems Ltd.,  
Two Century Plaza, Suite 480,  
2049 Century Park East,  
Los Angeles, CA 90067.  
Tel: (213) 203 0851.

## **THE LAST ONE**<sup>®</sup>

cold, warm, and occluded frontal structures.

The purpose of Shore Features is to acquaint the student with the geographical features of the shore/beach area of the coast.

Each lesson comes with a teacher/student user manual and requires an Apple II Plus or Apple II with Applesoft in ROM or Language system, one disk drive, and DOS 3.3.

The price for each tutorial is \$24.95.

For more information: TYC Software, 40 Stuyvesant Manor, Geneseo, NY 14454; (716) 243-3005.

**CIRCLE 167**

## Test Correction

The Educational Assessment Test-Correcting System enables school districts to grade their own school-

wide and district-wide examinations. The system correlates student objectives with specific performance indicators, and produces reports for three levels within a school district.

The system is for personal computers using CP/M and Microsoft BASIC-80, including Apple and TRS-80 Models I, II and III. The price is \$2000.

For more information: Applied Educational Systems, RFD #2, Box 213, Dunbarton, NH 03301; (603) 774-6151.

**CIRCLE 168**

## Attendance Tracking

The Attendance Tracking System (ATS) automates student attendance record keeping, accommodating continuous attendance records for one to eight periods-per-day for 180 days.

Available reports include: daily ab-

sence, cumulative absence, teacher discrepancy, individual history, parent notice, absence pattern, student list and faculty list.

The system is for the Apple II or Bell & Howell personal computer. The price is \$995.

For more information: Edu-Comp, 14109 S.E. 168 St., Renton, WA 98055; (206) 255-7410.

# The \$149<sup>95</sup> personal computer.

## Introducing the Sinclair ZX81

If you're ever going to buy a personal computer, now is the time to do it.

The new Sinclair ZX81 is the most powerful, yet easy-to-use computer ever offered for anywhere near the price: only \$149.95\* completely assembled.

Don't let the price fool you. The ZX81 has just about everything you could ask for in a personal computer.

### A breakthrough in personal computers

The ZX81 is a major advance over the original Sinclair ZX80—the world's largest selling personal computer and the first for under \$200.

In fact, the ZX81's new 8K Extended BASIC offers features found only on computers costing two or three times as much.

Just look at what you get:

- Continuous display, including moving graphics
- Multi-dimensional string and numerical arrays

\* Plus shipping and handling. Price includes connectors for TV and cassette, AC adaptor, and FREE manual.

- Mathematical and scientific functions accurate to 8 decimal places
- Unique one-touch entry of key words like PRINT, RUN and LIST
- Automatic syntax error detection and easy editing
- Randomize function useful for both games and serious applications
- Built-in interface for ZX Printer
- 1K of memory expandable to 16K

The ZX81 is also very convenient to use. It hooks up to any television set to produce a clear 32-column by 24-line display. And you can use a regular cassette recorder to store and recall programs by name.

### If you already own a ZX80

The 8K Extended BASIC chip used in the ZX81 is available as a plug-in replacement for your ZX80 for only \$39.95, plus shipping and handling—complete with new keyboard overlay and the ZX81 manual.

So in just a few minutes, with no special skills or tools required, you can upgrade your ZX80 to have all the powerful features of the ZX81. (You'll have everything except continuous display, but you can still use the PAUSE and SCROLL commands to get moving graphics.)

With the 8K BASIC chip, your ZX80 will also be equipped to use the ZX Printer and Sinclair software.

### Warranty and Service Program\*\*

The Sinclair ZX81 is covered by a 10-day money-back guarantee and a limited 90-day warranty that includes free parts and labor through our national service-by-mail facilities.

\*\*Does not apply to ZX81 kits.

**NEW SOFTWARE:** Sinclair has published pre-recorded programs on cassettes for your ZX81, or ZX80 with 8K BASIC. We're constantly coming out with new programs, so we'll send you our latest software catalog with your computer.

**ZX PRINTER:** The Sinclair ZX Printer will work with your ZX81, or ZX80 with 8K BASIC. It will be available in the near future and will cost less than \$100.

**16K MEMORY MODULE:** Like any powerful, full fledged computer, the ZX81 is expandable. Sinclair's 16K memory module plugs right onto the back of your ZX81 (or ZX80, with or without 8K BASIC). Cost is \$99.95, plus shipping and handling.

**ZX81 MANUAL:** The ZX81 comes with a comprehensive 164-page programming guide and operating manual designed for both beginners and experienced computer users. A \$10.95 value, it's yours free with the ZX81.

# The \$99<sup>95</sup> personal computer.

## Introducing the ZX81 kit

If you really want to save money, and you enjoy building electronic kits, you can order the ZX81 in kit form for the incredible price of just \$99.95\*. It's the same, full-featured computer, only you put it together yourself. We'll send complete, easy-to-follow instructions on how you can assemble your ZX81 in just a few hours. All you have to supply is the soldering iron.

### How to order

Sinclair Research is the world's largest manufacturer of personal computers.

The ZX81 represents the latest technology in microelectronics, and it picks up right where the ZX80 left off. Thousands are selling every week.

We urge you to place your order for the new ZX81 today. The sooner you order, the sooner you can start enjoying your own computer.

To order, simply call our toll free number, and use your MasterCard or VISA.

To order by mail, please use the coupon. And send your check or money order. We regret that we cannot accept purchase orders or C.O.D.'s.

**CALL 800-543-3000.** Ask for operator #509. In Ohio call 800-582-1364. In Canada call 513-729-4300. Ask for operator #509. Phones open 24 hours a day, 7 days a week. Have your MasterCard or VISA ready.

These numbers are for orders only. For information, you must write to Sinclair Research Ltd., One Sinclair Plaza, Nashua, NH 03061.

### UTILITY

#### Operating System

DBOS (Data Base Operating System) is a CP/M-compatible operating system designed for Micromation's M/NET multi-processor personal computers.

Features include an embedded data-base management system, passwords, file protection and data handling in a multi-user environment.

The software was created for hard-disk systems with multiple users and contains an integral data-base management system, allowing each user to work with the entire data bank. All information files can be indexed using up to 16 different ISAM keys for programming changes and rapid data retrieval. Search time is reduced by automatic file updating and sorting.

The DBOS operating system is included in all M/NET multi-user systems. The cost ranges from \$5500 for a single-user system to \$26,850 for an eight-user system with hard disk and tape back-up.

For more information: Micro-mation, 1620 Montgomery St.,

San Francisco, CA 94111; (415) 398-0189.

**CIRCLE 171**

#### Data Organizer

The Color Data Organizer for the TRS-80 Color Computer stores, retrieves, sorts and prints information, and holds 125 records in 16k. The system can also collect, organize and print the user's information in his own data base.

The price is \$24.95.

For more information: Computerware, Box 668, 1472 Encinitas Blvd., Encinitas, CA 92024; (714) 436-3512.

**CIRCLE 172**

#### Utility Disk

**CIRCLE 75**

alphabetical order and shows the file size for each file name.

A disk-usage summary is provided, reporting the number of bytes on the disk, the number of file names in use and the space used. It also reports the number of available file names and space. XDIR works on single-density and double-density floppy disks as well as with hard disks.

The disk also contains an Extract program which lists a portion of a file between two label names. Strip removes the hex code from a PRM file and turns it back into the ASM file.

The Sort program creates a symbol table from an assembly done with ASM, and can be listed or used with SID, the Digital Research debugging program. Convert changes all un-commented lowercase characters to uppercase. Status provides information about the current operating

system—memory available, TPA size, top of memory address and I/O assignments.

DMM-1 comes on an 8-inch single-density disk or on a 5¼-inch disk for North Star CP/M users. The price is \$35 plus \$1.50 for shipping and handling.

For more information: Elliam Associates, 24000 Bessemer St., Woodland Hills, CA 91367; (213) 348-4278.

**CIRCLE 173**

## COMMUNICATION

### Electronic Mail

Two communications programs, Micro-Courier and Micro-Telegram, turn an Apple II into a communications tool. This allows the computer to send many forms of busi-

ness information to another Apple and to access Western Union communications lines.

Micro-Courier is designed for professional use by businesses, managers and others who frequently require overnight or instant exchange of information. It allows an Apple II user to automatically transmit charts, graphs, correspondence, VisiCalc reports and programs over standard phone lines.

The user can transmit messages locally or nationwide to a time-sharing data base or to a mini-computer. The user can also check the status of outgoing mail, monitor incoming mail and send a message to 100 recipients. The program re-dials automatically if the line is busy.

Micro-Telegram enables users to access Western Union services; send mailgrams; and send and receive

## SOFTWARE UPDATE

TWX, Telex, and international Telex messages. Through Infomaster, the Western Union data base, users can also obtain continuously updated reports on news, stock, foreign exchange, gold and commodities futures.

Other features enable users to edit messages, and store and retrieve mailing lists and files. The Micro-Telegram system also has re-try logic and answer-back validation to insure that a message is received.

Each package costs \$250.

For more information: Apple Computer, 10260 Bandley Dr., Cupertino, CA 95014; (408) 996-1010.

**CIRCLE 174**

### RJE Package

Synch, a 2780/3780 IBM binary-synchronous software communications package, is available for the TRS-80 Model II.

The package emulates 2770, 2780, and 3780-type bi-synchronous work stations at data rates up to 9600 baud. It supports transparency, buffer expansion (128, 256 and 512 bytes), space compression, processor interrupt (RVI), and multi-point. In addition, the package provides a Remote Job Entry capability, and automatic features allow up to 100 files to be queued for unattended operation.

The price is \$500 for software and documentation.

For more information: Westico, 25 Van Zant St., Norwalk, CT 06855; (203) 853-6880.

**CIRCLE 175**

### LEISURE/HOME

#### Home Checkbook

Chequemate is a home-checkbook and budget-control program. It provides budgeting with comparison to actuals by graph and report, credit-

card charges, outstanding-bill control, shorthand-entry macro's, automated-teller transactions and multiple-account capability.

Other features include screen printing, complete access to all data elements and user-defined budget categories. Reports cover account listing, outstanding bills and standard entries.

The program runs on an Apple II Plus with 48k, one to four disk drives and a printer.

The price is \$39.95.

For more information: Masterworks Software, 1823 W. Lomita Blvd., Lomita, CA 90717; (213) 539-7486.

**CIRCLE 176**

### Three Games

Alpha Fighter, Intruder Alert and Giant Slalom are games for the Atari 400 and 800 personal computers. Each requires a joystick and has extensive sound and graphics.

Alpha Fighter requires the player to destroy alien starships passing through his sector of the galaxy. Intruder Alert places the player in the position of avoiding droids while trying to find his escape ship. Giant Slalom pits the player against a downhill skiing course consisting of both open and closed games.

Alpha Fighter and Giant Slalom cost \$14.95 on cassette and \$18.95 on disk. Intruder Alert costs \$16.95 on cassette and \$20.95 on disk.

For more information: Dynacomp, 1427 Monroe Ave., Rochester, NY 14618; (716) 442-8960 or (716) 586-7579.

...the plus in printers

The important plus in matrix printers:

# grafixPLUS.™

Since their introduction in mid-1980, the Anadex high-resolution DP-9500 Series matrix printers have set new standards for printer quality and performance. All models feature the rugged Anadex 9-wire print head that combines long life with resolutions of 72 dots/inch vertical and up to 75 dots/inch horizontal. With this kind of resolution, fineline graphics (under data source control) and razor sharp characters are pluses built into every printer.

#### Performance Plus

The full standard ASCII 96 character set, with descenders and underlining of all upper and lower case letters, is printed bi-directionally, with up to 5 crisp copies, at speeds up to 200 CPS. Models DP-9500 and DP-9501 offer 132/158/176 and 132/165/198/220 columns respectively. Print densities are switch- or data-source selectable from 10 to 16.7 characters/inch. All characters can be printed double-width under communications command.

#### Interface Plus

Standard in all models are the three ASCII compatible interfaces (Parallel, RS-232-C, and Current Loop). Also standard is a sophisticated communications interface to control Vertical Spacing, Form Length and Width, Skip-Over Perforation, Auto Line Feed, X-On/Off, and full point-to-point communications.

#### Features Plus

As standard, each model features forms width adjustment from 1.75 to 15.6 inches, shortest-distance sensing, full self-test, 700 character FIFO buffer (with an additional 2048 characters, optional), and a quick-change, 6 million character life ribbon.

#### Quality Plus

Beyond the built-in performance of the grafixPLUS series printers, the engineered-in quality and support are equally important. The result? Approval of both UL and FCC, Class A; operating noise levels under 65dbA; and a nationwide service organization second to none.

To see for yourself why the grafixPLUS printers offer more pluses for your printing dollar, contact us today.

### Shack-80 Model-1 Users: Restore Reliability

Tired of spontaneous re-booting, "loss" of memory, UL ERROR on programs that are correct, "BAD RAM" or ROM that is good and other symptoms of dirty edge connectors?

CIE Cramolin cleaning kit lets you quickly, safely strip away coatings of high-resistance oxide films built upon .S-80's non-gold-plated edge fingers, and coat them to reduce further buildup. Contains one bottle cleaner, one lubricant/sealer.

CIE Cramolin \$8.95 (\$9.49 CA)

### Silver Solder Rejuvenates Shack-80 Edge Connectors

Ratty Radio Shack edge fingers require frequent Cramolin cleaning for system reliability. Tandy did not gold plate them, but after you silver them you can tug cables and jar computer without system reboot!

Kit contains special high-quality flux and 16" (about 1.5 oz) of solder, 5-6% silver, balance tin (contains no cadmium, zinc, or lead). Caution: do not resolder fingers with ordinary solder, or system will be totally unusable!

CIE \$4.50 (\$4.77 CA)

## SOFTWARE UPDATE

els and a statue while avoiding mummies and ghosts that guard treasures and steal jewels.

The game offers a beginner's maze and two advanced mazes. Options include a user-definable keyboard control, sound toggle and a pause feature.

The program requires an Apple II or II Plus with 48k and a disk drive.

The price is \$34.95.

For more information: Sirius Software, 2011 Arden Way #2, Sacramento, CA 95825; (916) 929-1939.

CIRCLE 178

### Listing Program

A name, address and phone number program updates lists for home use. To look up listing information, simply type in the first five letters of the last name.

Written in BASIC, the program provides space for last name, first name, title, home phone, business phone, two lines for address, city, state and zip code. In addition, the program automatically loads and runs the integrated programs to add or delete names, change information, make new files, alphabetize a file (but keep the old for backup), and print the information in roster or address-label form.

To run the program, the user does not have to set up the file. The computer defines the file with a reasonable number of characters allowed for each type of information, and stores and retrieves as each program is used. The program instructs the user when to change diskettes, or a single diskette can be used for storage of 128 different names, addresses and phone numbers.

The programs are available, with instructions, on a 5¼-inch diskette for the Compucolor II or Intecolor computer.

The price is \$27.95 plus tax and postage.

For more information: Metra

Instruments, 2056 Bering Dr., San Jose, CA 95131; (408) 297-8530.

CIRCLE 179

### Adventure Game

"Voyage of the Valkyrie" is an interactive adventure game with graphic realism and audio soundtracks.

The game is available for the TRS-80 Model I and III on disk and cassette, and for the Apple with 48k and game paddles in disk only.

Each disk costs \$39.95, and each cassette is \$34.95.

For more information: Advanced Operating Systems, 450 St. John Rd., Michigan City, IN 46360; (219) 879-4693.

CIRCLE 180

### Cube Game

Magikube, a computer version of Rubik's Cube, is available for the TRS-80 Color Computer.

The user has the option of scrambling the cube himself or working from one of the computer's several levels of scramble. In either case, the user must restore the cube to its original state. The game also has a feature which allows the user to save the cube and continue at another time.

The price is \$19.95.

For more information: Computerware, 1472 Encinitas Blvd., Encinitas, CA 92024.

CIRCLE 181

### Space Game

Outpost is a space game where each player must defend his ships and base from enemy torpedos and ships using propulsion jets and shields.

The game features eight levels of play, user-defined keys, sound on/off toggle, escape for temporary interruptions of the game and a restart function. The game requires an Apple II with 48k and one disk drive.

The price is \$29.95.

For more information: Sirius Software, 2011 Arden Way #2, Sacramento, CA 95825; (916) 920-1939.

CIRCLE 182

## BASIC Workbook

*Understanding Your CIP/C4P: A Workbook of BASIC Exercises* is designed for the Ohio Scientific CIP, SUPERBOARD II, AND CHALLENGER C4P. It introduces the fundamentals of the OSI BASIC calculator and program mode, input and output, data representation and program storage on cassette.

The book describes OSI control and logic including testing and branching, subroutine use and logical operations, and also covers character strings and array handling. Included are exercises and sample programs.

The cost of the book is \$7.95 plus \$2 shipping and handling.

For more information: Total Information Services, P.O. Box 921, Los Alamos, NM 87544; (505) 455-7049.

**CIRCLE 183**

## 68000 Software Book

*The 68000: Principles and Programming* is a textbook designed to systematically guide the reader through fundamental and complex tasks in programming the Motorola 68000 16-bit microprocessor.

The book gives an overview of the 68000 and explains its registers,

design, and the Cross-Macro Assembler-addressing modes. Simple and complex program examples are given for math, list and look-up table operations. Each of the pins is described in functional groups followed by processing states, privilege states and the extensive "exception" structure of the 68000. Support circuits and fundamental I/O operations are summarized and currently available system hardware and software products are surveyed.

The book is available for \$14.95 plus \$1 shipping.

For more information: Group Technology, P.O. Box 87, Check, VA 24072; (703) 651-3153.

**CIRCLE 184**

## Solutions Brochure

The *Intelligent Solutions* brochure explains how you can transform the personal computer into a more powerful business, professional or educational system.

The brochure details several Winchester disks, backup and network systems, and outlines applications for a personal computer — order and word processing, inventory control, accounting, electronic mail, educational applications and professional office record-keeping.

The brochure is free.

For more information: Corvus Systems, 2029 O'Toole Ave., San Jose, CA 95131.

**CIRCLE 185**

## BASIC Programs

The second edition of *50 Programs in BASIC for the Home, School & Office* is available for business, education and home applications.

Each of the programs is ready to run on the TRS-80 Pocket Computer, the Sharp PC-1211, and on any BASIC computer with minor modifications to program lines.

The book contains programs that

## A Different Kind of Adventure

Explore the erotic offerings of a modern city in search of the key to the entrance to Madame Scarlet's house. Once inside, you will find the fulfillment of your wildest fantasies! However, getting there is more than half the fun! On every street corner and alley there lurk denizens of the night. Beware! In the purple Eldorado may be hiding more than you bargained for!

## WARNING

This game contains graphic and explicit language. Do not order this game if you are offended by such language.

For those who are not offended by such language and want to spice up their computers, there is a blonde at the bar who is staring seductively at you.

Specify TRS 80 Model I, Model III or Apple II. Requires 16K.

## NEW LITERATURE

save time by computing ad costs, profits, price mark-ups, hourly wages, and invoices for small businessmen. For educators there are flash-card drills, grade scoring, factors, slope, distance and geometry. For home users there are mortgage loans, simple and compound interest.

The book is available for \$9.95 plus \$1 shipping.

For more information: ARCsoft Publishers, P.O. Box 132, Woodboro, MD 21798; (301) 845-8856.

**CIRCLE 186**

### 3 New Titles

*Some Common BASIC Programs* for the TRS-80 Level II computer contains seven short financial, mathematical and statistical programs that can be keyed into the TRS-80. The price is \$14.99.

*Microprocessors for Measurement and Control*, written in the interest of controlling mechanical equipment with a personal computer, explores techniques for designing mechanical and process equipment without prior knowledge of the machine or assembly language. The cost is \$15.99.

*Interfacing to S-100 IEEE/696 Microcomputers* helps users expand the utility and power of their systems. It describes mechanical, functional and electrical design of the system along with bus interconnections, bussing techniques and interfacing to RAM, ROM and the real world. The cost is \$15.

For more information: OSBORNE/McGraw-Hill, 630 Bancroft Way, Berkeley, CA 94710; (415) 548-2805.

## America's newest home appliance: the computer terminal

In a few years, millions of Americans will have computers in their own homes—yet many of us remain functional illiterates when it comes to computers. In this book Joseph Deken, a brilliant computer scientist, presents the computer as a useful tool rather than a mysterious entity. He provides an entertaining, jargon-free guide to how computers work and how they can be used in our daily lives for everything from balancing check-books to "working at the office" while still sitting at home (telecommuting). No matter what the future holds in store, this is the *only* computer book you'll ever need! Illustrated with computer drawings. \$14.95

# Now with added words!\*

## ELECTRIC MOUTH

for S100, Elf II, Apple  
TRS-80, Level II\* From **\$99.95** kit

**Now — teach your computer to talk, increasing interaction between you and your machine.**

That's right: the ELECTRIC MOUTH actually lets your computer talk! Installed and on-line in just minutes, it's ready for spoken-language use in office, business, industrial and commercial applications, and in games, special projects, R&D, education, security devices — there's no end to the ELECTRIC MOUTH's usefulness. Look at these features:

- Supplied with 143 letters/words/phonemes/numbers, capable of producing hundreds of words and phrases.
- Expandable on-board up to thousands of words and phrases with additional speech ROMs (see new speech ROM described below).
- Four models, that plug directly into S100, Apple, Elf II and TRS-80 Level II computers.
- Get ELECTRIC MOUTH to talk with either Basic or machine language (very easy to use, complete instructions with examples included).
- Uses National Semiconductor's "Digitaler."
- Includes on-board audio amplifier and speaker, with provisions for external speakers.
- Installs in just minutes.

**Principle of Operation:** The ELECTRIC MOUTH stores the digital equivalents of words in ROMs. When words, phrases and phonemes are desired, they simply are called for by your program and then synthesized into speech. The ELECTRIC MOUTH system requires none of your valuable memory space except for a few addresses if used in memory mapped mode. In most cases, output ports (user selectable) are used.

# MAJOR OVERHAUL.

**Version 5.0 being unveiled January 1st—  
buy it in December  
and SAVE \$120.**

The 4.0 version of The Data Factory is being sold now for \$150. Our new 5.0 version will retail for \$300. Save \$120 from the cost of the new edition by purchasing the 4.0 version and our Extended Warranty for \$30. You can then update The Data Factory to get the new 5.0 copy in January.

The new version offers so much power and control that it's difficult to imagine what else you'd want in a data base. The 5.0 version of The Data Factory includes a personal input routine that allows you to completely customize your inputs; a new output routine brings pin point control to your printouts; a new sort feature works with amazing speed (1000 names in under six seconds); multi-data disks on-line; and other new features never before offered on micro computers. Micro Lab leads the way.

## Prepare them for their future

In a society bound together by information, computers are as fundamental to a child's education as reading and writing. In this age of such rapid change, learning itself is an essential skill. Today's children will be adults in a complex, computerized society.

Young children can take to the computer as effortlessly as they learn to speak. Why not use this time to its fullest advantage?

The microcomputer is the ideal learning companion. Its patience is infinite, and its feedback is immediate. Well-designed software systems from Edu-Ware create comfortable interaction between children and the computer, making learning easy.

The microcomputer's high-resolution graphics capture even the youngest child's attention and facilitate comprehension. Apple is a registered trademark of Apple Computer, Inc.

### SPELLING BEE™ with READING PRIMER™

our two companion programs introduce the concept of words and spelling to learners, ages 3-6, by linking abstract verbal symbols (words) with familiar objects (pictures). Applesoft, 48K, DOS 3.3 \$39.95.

### COUNTING BEE™

colorful learning units develop a child's (ages 3-6) familiarity with counting, addition, subtraction, shape discrimination, weights, and measures. Applesoft, 48K, DOS 3.2 or 3.3 \$29.95

### COMPU-MATH™ ARITHMETIC SKILLS

moves into more serious instruction, teaching entry-level skills (addition, subtraction, multiplication, division) and forming the foundation of Edu-Ware's COMPU-MATH series. Suitable for ages 6-10 and remediation of older learners. Applesoft, 48K, DOS 3.2 or 3.3 \$49.95

Each Edu-Ware system features a learning management mode, which allows parents and teachers to preset the system, with emphasis and duration tailored to an individual child's needs.

**EDU-WARE®**  
The Science of Learning™

Other Apple learning systems from Edu-Ware include COMPU-MATH™ FRACTIONS, DECIMALS, ALGEBRA 1, COMPU-READ 3.0, and COMPU-SPELL, FRACTIONS, DECIMALS, and COMPU-READ 3.0 are available in Atari BASIC.

Edu-Ware is a registered trademark of Edu-Ware Services, Inc.

Edu-Ware Services, Inc., 22222 Sherman Way, Suite 203, Canoga Park, CA 91303 (213) 346-6783

# Hayden Gameware—

## Who Can Resist?

New! **TETRAD** (Hess) Now try 3-dimensional tic tac toe, and enjoy beautiful color, surprising sound, and a choice of 3 levels of difficulty. A real challenge that allows 76 winning combinations. TETRAD adds a new dimension to a familiar game as you battle the computer to get 4 in a row in any direction!

**09809, Apple II, \$19.95**

New! **KLONDIKE 2000**

(Trackman) Gold is hidden in the desolate caves of a mine in the Martian desert. You discover the secret to gaining the loyalty of hostile robots guarding the gold. But you must fight conniving opponents, and carry your gold out of the mine. Suspense! Treachery! Excitement!

**10209, Apple II Disk, \$24.95**

**BLACKJACK MASTER:** A Simulator/Tutor/Game (Wazaney) BLACKJACK MASTER performs complex simulations and evaluations of any playing and betting strategies that you enter into the computer.

**05303, TRS-80 Level II tape, \$24.95; 05308, TRS-80 Level II Disk, \$29.95.** Soon To Be Released, **Apple II Disk, 05309**

New! **MIND THRUST** (Sackson and Wazaney) Match wits with the computer! Be the first to complete a chain across the board. Switch sides at any time and control your opponent's peices as he controls yours.

**07403, TRS-80 Level II, \$16.95**

**SARGON II** (Spracklens) The first great computer chess program. "This program represents a giant step forward in microcomputing Chess. . . an excellent program which will provide a true challenge for many players. We are impressed with the program's speed, its opening book, and its much improved end game. . . save your money and buy SARGON II. . .

"Software Critique.

**03404, Apple II**

**03410, OSI C1P,**

**03418, TRS-80 Models I and II,**

**03440, OSI C4P,**

**each tape \$29.95**

**03408, TRS-80 Level II disk,**

**03409, Apple II disk,**

**03414, OSI C1P,**

**03444, OSI C4P disk,**

**03484, OSI C8P disk,**

**each disk, \$34.95**

**REVERSAL** (Spracklens) One of our most popular games! This version of the 200-year-old Reversi features 27 levels of play and high resolution color graphics. Written by the authors of SARGON II!

**07004, Apple II tape;**

**07012 ATARI tape (Soon to be Available) each tape, \$29.95**

**07009, Apple II Disk, \$34.95**

New! **TRS-80 GALAXY OF**

**GAMES** (Dilley, Savolaine, and Wilkerson) A real bargain—and hours of fun, too! **HANGMAN**—The most famous word game—you'll get hung up on it!

**ONE-ARM BANDIT**—A home version of the casino slot machine! **SKUNK**—An exciting dice game! You'll get "skunked" when you roll no points! **JACKS**—A card game in which small is great! Trade high cards for low ones and win!

**09903, TRS-80 Models I & III, \$14.95**

## Coming Soon...

### STAR TRADERS

(Trackman) Just as centuries ago, merchants loaded sailing ships with gems, gold herbs, and spices to trade throughout the world, so can you load your space ship with computer software, uranium, precious metal, etc., and travel to distant planets for the best deal! Who wins? The one with the most money, of course!

**10709, Apple II disk, \$19.95**

### ALIBI

(Trackman) You must interrogate sleazy, intelligent, treacherous and deceitful suspects to solve dreadful murders. Cases become more difficult and the number of suspects increase as you become more skillful! The best detective game for microcomputers!

**10909, Apple II Disk, \$19.95**

Available at your local computer store!

## ANNOUNCING SUPER SCORE

.....the new sensational strategy game for 1-4 players!!!! Super Score is similar to SCRABBLE\* but played with numbers in place of letters. Numbers are played to the Super Score board in horizontal or vertical groups that intersect with previously played groups of numbers. All groups formed must total 10. Object is to outscore your opponents by creating bonus play situations and through defensive maneuvers. Computer deals hands, updates playing board, and does the scoring, leaving the strategizing all up to you. No two games are ever alike.

Available in Hi-Res Color for Apple II or Plus.\*\* Requires 48K and disk. Specify Apple II or Plus and 13 or 16 sectors disk when ordering.

Ask your dealer or send check or money order for \$34.95 (disk only) plus \$2.00 for handling to: Super Score, P.O. Box 37, Saugus, CA. 91350. California residents add 6% Sales Tax.

\*SCRABBLE is reg. trademark of Selchow & Righter, Co. \*\*APPLE is a reg. trademark of Apple Computer Co.

**Dot Matrix Printer Interfaces with Apple II**  
Featuring an Apple II-compatible parallel interface, Addmaster Corporation has produced a new dot matrix printer, Model 170. The interface includes a Centronics-type handshake and DB-25 interface connector, Baudot, and day and time clock. The Model 170 provides 18 or 21 characters per line, 6 lines per inch print density, on standard 2 1/2" adding machine tape. Designed to use with personal computers, Model 170 will produce hard and carbonless copies of programs, data or results. Write Addmaster Corporation, 416 Junipero Serra Dr., San Gabriel, CA 91776 or call 213/285-1121.

## Have you developed...

an educational program, a  
fantasy game, an arcade game,  
or a home application? We are  
looking for outstanding programs  
for the ATARI and/or APPLE II  
computers. Program MUST fully  
utilize the features of the com-  
puter that it was developed on.

Programmer will retain all rights  
and ownership while the program  
is being reviewed. Equitable con-  
tract will be negotiated on suit-  
able software.

Submit program complete with  
documentation or write for our  
programmer's guide.

**I.H.E.S.I.S.**

P.O. Box 147  
Garden City, MI 48135  
or call (313) 595-4722

## 1001 THINGS TO DO WITH YOUR PERSONAL COMPUTER

BY MARK SAWUSCH

333 pages . . . . \$10.95

333 pages, written in simple terms, of "what-to-do" and "how-to-do-it". Suitable not only for microcomputers, but for programmable calculators as well. Includes program listings, formulas, a glossary of computer terms and more! Definitely a MUST BUY!

## "OTHER MYSTERIES" VOLUME IV BASIC FASTER AND BETTER

If you program in BASIC, you want this book! Time-tested and proven, the techniques and routines can be used in thousands of ways to make your programs smaller, faster, and look truly professional. Over 280 pages, includes hundreds of routine listings, sample programs, explains not only "how-to", but "why" and "when." You'll never need to "re-invent the wheel" again! Topics includes screen and keyboard handling, searching, sorting, fast string manipulation, simple machine-language usage, utility programs, and much more!

BASIC FASTER & BETTER . . . . \$24.95

## Let your TRS-80™ Test Itself With THE FLOPPY DOCTOR & MEMORY DIAGNOSTIC

by David Stambaugh

A complete checklist for your MODEL I or MODEL III. THE FLOPPY DOCTOR-Version 3 completely checks every sector of single or double density 35-, 40-, 77-, or 80-track disk drives. Tests motor speed, head positioning, controller functions, status bits and provides complete error logging. THE MEMORY DIAGNOSTIC checks for proper write/read, refresh, executability and exclusivity of all address locations. Includes both diagnostics and complete instruction manual.

SYSTEM DIAGNOSTICS . \$24.95  
For MODEL III . . . . . \$29.95

# THE COMMODORE COMPUTERS

## "FROM \$300 TO \$1995, THEY COST LESS AND GIVE YOU MORE FOR YOUR MONEY. READ OUR CHART."

— William Shatner

The idea of a computer in every office and home used to be science fiction. Now it's becoming a reality. The question is, with so many to choose from, which computer should you buy? When you consider the facts, the clear choice is Commodore.

### COMPARE OUR \$995 COMPUTER

FEATURES	COMMODORE 4016	APPLE II	IBM
Base Price	\$995	\$1,330	\$1,565
12" Green Screen	Standard	299	345
IEEE Interface	Standard	300	NO
<b>TOTAL</b>	<b>\$995</b>	<b>\$1,929</b>	<b>\$1,910</b>
Upper & Lower Case Letters	Standard	NO	Standard
Separate Numeric Key Pad	Standard	NO	Standard
Intelligent Peripherals	Standard	NO	NO
Real Time Clock	Standard	NO	NO
Maximum 5 1/2" Disk Capacity per Drive	500K	143K	160K

Prices are as of the most recent published price lists, September, 1981 and approximate the capabilities of the (16K) PET® 4016. Disk Drives and Printers are not included in prices. Models shown vary in their degree of expandability.

Many experts rate Commodore Computers as the best desk-top computers in their class. They provide more storage power — up to 1,000,000 characters on 5 1/4" dual disks — than any systems in their price range. Most come with a built-in green display screen. With comparable systems, the screen is an added expense. Our systems are more affordable. One reason: we make our own microprocessors. Many competitors use ours. And the compatibility of peripherals and basic programs lets you easily expand your system as your requirements grow. Which helps explain why Commodore is already the No. 1 desk-top computer in Europe with more than a quarter of a million computers sold worldwide.

### WE WROTE THE BOOK ON SOFTWARE.

The Commodore Software Encyclopedia is a comprehensive directory of over 500 programs for business, education, recreation and personal use. Pick up a copy at your local Commodore dealer.

### FULL SERVICE, FULL SUPPORT.

Commodore dealers throughout the country offer you prompt local service. In addition, our new national service contract with TRW provides nationwide support. Visit your Commodore dealer today for a hands-on demonstration.
